DEDICATION.

TO THE
RIGHT HON. LORD FEVERSHAM.

MY LORD,

HARDING
“The highest humanity is the soundest policy.”
Your lordship, early in your political career, appreciated the truth and wisdom of this maxim. A quarter of a century has elapsed since, at a county meeting in the Castle-yard of York, by the bold expression of your sense of the responsibilities of the rich to the poor, and of the government to society, your lordship linked yourself to the hearts of the factory operatives. Your lordship has witnessed a protracted conflict between the supporters and opponents of factory regulation,—you have taken therein an important part; the social, moral, and educational advantages which have followed the passing of the Ten Hours’ Bill, in 1847, cannot have failed to be gratifying to your heart, and, in some degree, to have rewarded you for your manifold exertions.

332235

When friends to the oppressed factory workers were few, your lordship stepped boldly forth, and, by your example, contributed to bring about a salutary change in public opinion. When public opinion had undergone a desirable transition, and the mind of the legislature had become ripe for legislation ; your lordship distinguished yourself by the earnestness with which, in your legislative capacity, you sealed the efforts of earlier years, with the approval of a majority of the House of Lords.

Because of early, consistent, and continuous exertions, on behalf of the interests of those engaged in factory labour, I esteem it a privilege to be allowed to dedicate "THE HISTORY OF THE FACTORY MOVEMENT," to your lordship.

I have the honour to be,

My Lord,

Your Lordship's humble and obedient servant,

ALFRED.

P R E F A C E.

CUSTOM has established the rule, that authors should state the reasons why they write books. Recent discussions in parliament, and the tone of a portion of the periodical literature of the time, have convinced the Author that the facts of the factories, as these existed prior to factory regulation by law, were either forgotten or misunderstood, and, that the means taken to change that condition have been frequently misapprehended; he, therefore, considers it to be a duty to present to the public and to statesmen a narrative, compiled from authentic sources, embodying these facts. The social condition of the working classes is a subject of growing influence; the number of persons, under the operation of the Factories' Regulation Acts, is, probably, not fewer than half a million, and is rapidly on the increase; the past history of the factory operatives, as a class, can scarcely fail to be of interest to many among themselves; the parliamentary records, of more than half a century, bear witness to the importance of the factory question in the eye of the legislature; as a subject

of social and political moment, it is worthy of special study. The press, which in this country reflects and leads public opinion, and prepares the national mind for legislation, has long esteemed the factory question as one of high importance

The leaders of the factory movement, in comparatively recent times, have, by extraordinary exertions, forced on an unwilling government, a recognition of its duty, to protect by law the helpless; it was reserved for the promoters of the factory movement to break through the commercial materialism of their age, to compel society and the legislature to recognise every woman, young person, and child, employed in the textile branches of British manufacture, as a human creature, having a mind and body to be cared for, and, as being an object of higher regard than merely a piece of factory furniture, whose existence had no end to accomplish, beyond producing the greatest possible quantity of goods at the lowest possible cost.

To supply, in a condensed form, yet, with a fulness sufficient for the ordinary purposes of the practical student in history and politics, a narrative of these exertions, is, the Author trusts, a work not incompatible with the wants of the age. Many efforts are now being made on behalf of the social improvement of the working classes; a circumstance which renders a knowledge of the past more desirable than it, otherwise, would have been.

The subject of factory regulation has, for years, received a considerable share of the Author's atten-

tion; he believes that its importance, though generally recognized, is not so fully appreciated, as it deserves; he has been personally familiar with some among the principal leaders of the factory movement; from his own experience, he is certain that their labours have not hitherto been duly acknowledged. Historical justice, of which much has been recently said, requires, that all efforts, for or against the public good, should be registered; and, that every necessary means should be applied for the establishment and preservation of the whole truth, without regard to the prejudices or interests of parties or individuals.

The factory system is the result of a new power in modern civilization, unknown to ancient states, and having no parallel in the history of modern nations; its origin, progress, and effects, as manifested in society, consequently, claim close attention from all who are interested in the present and future well-being of those engaged in manufacturing industry.

The division of labour is an important condition of modern production; it is as applicable to the narration of events as to watchmaking, and will be found advantageous for purposes of information and reference.

The vague sense often attached to the word *constitutional*, induces the Author to observe that, when used by him, it is to be understood by the reader as meaning, *in concordance with the general spirit of the laws of this country.*

The Author has endeavoured to present facts and

documents in the words in which he found them, rather than in his own, but, he has not shrunk from an expression of his opinions; knowing, that every discriminating reader will separate the statement of things done, from the judgment expressed, and give unto each due consideration. The Author has often asked himself—"Why should the history of a movement which occupied many years of the lives of some self-sacrificing, strong-minded, persevering, and benevolent men, ultimately commanded an over-ruling share of public attention, and left the mark of its existence on the legislation of the country, be to society less interesting or valuable than the biography of an eminent statesmen or divine?"

The Author's desire to do justice to the services of some public men whose motives, intentions, and actions have, even in the highest places, been misunderstood and misrepresented, constitutes the warrant for the work on which he has entered.

LONDON, *October*, 1857.

THE
HISTORY OF THE FACTORY MOVEMENT.

CHAPTER I.

WILLIAM PITT, THE ENGLISH MANUFACTURERS, AND ENGLISH CHILDREN.
—PROMINENT FACTS ILLUSTRATING THE SOCIAL CONDITION OF
ENGLAND ANTERIOR TO THE INTRODUCTION OF THE FACTORY
SYSTEM.

THE history of the manufacturing industry of this country has long been a subject of universal interest. The historians, the social, political, and moral economists of France, have devoted to the manufacturing industry of England a large share of their attention. The proximity of the two nations, the wide difference in their internal economy, in their industrial development, in the native bent of the genius of their peoples, have opened to the thoughtful of each nation a profitable and comprehensive range of inquiry and comparison in the study of the other. These circumstances render it desirable that the information conveyed by the authors of one nation regarding the industry of the other should be trustworthy.

William Pitt was an eminent statesman. We esteem M. Michelet, the French historian, as a man of genius and an author of deservedly high reputation. For these reasons,

his words relating to a statesman whose name is representative of an important period of English history have an especial interest. In a translation of *The People*, there is the following statement:—"In the height of the great duel between England and France, when the English manufacturers represented to Mr Pitt that the rise in the rate of wages incapacitated them from paying the taxes, he pronounced the terrible words, 'Take the children.' Those words weigh heavily upon England as a curse. Ever since that hour the race of its men have been deteriorating. This people, heretofore so athletic, is growing nerveless and enfeebled. What has become of that vividness and freshness of complexion which was so great a charm of English youth?—Faded, sullied. They listened to Mr Pitt. *They took the children.*" Granting the truth, in all its fullness, of the effects of the factory system, as narrated by M. Michelet, the memory of so distinguished a statesman as William Pitt demands an examination into the part which he is represented to have taken.

In the absence of proof of the fact related, we cannot admit the reasonableness of charging so terrible a national calamity upon a statesman who, so far as his public acts and recorded declarations are representative of his opinions, would have been the last of English statesmen to have uttered a sentiment so unmanly—so unwise. On what occasion was it that William Pitt, having been confronted by the English manufacturers in distress, said to them, in order that they should have been enabled to pay their taxes, "Take the children"?

"In the height of the great duel between England and France" the manufacturers of England were, as a rule, eminently prosperous. That prosperity increased the cupidity of some, and laid the foundation of the colossal fortunes of others, whose benevolence in their own neighbourhoods was beneficially exerted. True, there were times

of great distress, when, for a season, the manufacturing industry was prostrated; the remedy was not found by William Pitt in the unnatural labour of children, but in financial changes, in issuing exchequer-bills, the suspension of cash payments, giving direct relief in money, and other measures of a like kind. There is a passage in a speech spoken by William Pitt on February 12th, 1796, which, by misapprehension, may have led to the French historian's assertion. Mr Whitbread having in the House of Commons moved the second reading of the Labourers' Wages Bill, William Pitt said—"Experience had already shown how much could be done by the industry of children, and the advantage of early employing them in such branches of manufacture as they were capable to execute. The extension of schools of industry was also an object of national importance. If any one would take the trouble to compute the amount of all the earnings of the children who are educated in this manner, he would be surprised, when he came to consider the weight which their support by their own labours took off the country, and the addition which, by the fruits of their toil, and the habits to which they were formed, was made to its internal opulence. The suggestion of these schools was originally drawn from Lord Hales and Mr Locke, and upon such authority he had no difficulty in recommending the plan to the encouragement of the Legislature. Much might be effected by a plan of the nature susceptible of constant improvement." It is possible that M. Michelet may have mistaken the industrial schools recommended by William Pitt, for the employment of children in factories. William Pitt stated on whose authority the industrial schools he approved were founded.

In 1697, the neglected state of the children of the poor attracted the attention of the Government. The Board of Trade was authorised by William III to inquire into the subject; the Commissioners appointed were Lord Hales and

John Locke. Their report, said to have been written by Locke, is the key to the objects contemplated by Pitt ; these are faithfully conveyed in the following clause, extracted from the “Heads of a Bill for the better support and maintenance of the poor; prepared according to the plan opened by Mr Pitt to the House of Commons, in the present session of Parliament, 1796.”

“That the persons appointed to the management of the poor of any parish or united parishes, shall from time to time provide, by all lawful means in their power, a proper stock of hemp, flax, silk, cotton, iron, leather, or other materials, and also proper tools and implements for the employment of the poor; and it shall be lawful for the said parish, or united parishes, and for the poor thereof, and the person, or persons appointed to the management of the said poor, respectively to carry on all or any trades, mysteries, or occupations whatever, within any school or schools of industry established by virtue of this Act, and the buildings thereunto belonging, or at the houses or habitations of the poor persons of such respective parishes; any law, usage, or custom to the contrary notwithstanding; and that all persons whatever, who shall be lawfully settled in any parish where he, she, or they, may reside, or in any parish united therewith; and also all other persons residing in any such parish, under the authority of the Act, who shall be willing to be employed in any trade, mystery, occupation, or employment, carried on in the school, or schools of industry there, shall for themselves, respectively, and such of their respective families who are able and willing to work, be entitled to be employed in such school, or schools of industry, and to be instructed in any such trade, mystery, occupation, or employment there carried on, as shall be suited to his, her, or their strength, or ability, at such wages, or recompense, as shall be settled and established to be paid or made for the work done or performed by

him, her, or them, in such school, or schools of industry, according to the directions of this Act."

In the bill were provisions enabling the parish authorities to apprentice "to any respectable person in Great Britain," every male child of the age of fourteen, female child at twelve, or earlier if thought fit, for the purpose of being taught a useful handicraft. In 1817, the fundamental principle of the industrial training-schools projected by Hales and Locke, was approved by a Poor-Law Committee of the House of Commons. The pauperism and crime of the present century are in a great degree attributable to the neglect on the part of governments of the merciful and wise suggestions of Hales and Locke, supported by Pitt, but unfortunately not reduced to practice. The evil, as well as the good in society, bears witness to the truth of the words : "Train up a child in the way he should go, and when he is old he will not depart from it."

All who know the writings of Locke will remember how zealously, under all circumstances, he contended for health and recreation. Locke knew that the love of action was inseparable from childhood, and it was the constant aim of his practical philosophy to render the application of this instinctive desire healthful in mind and body to its possessor ; results incompatible with the unregulated factory system. Not any statesman, having read the writings of Locke, could fail to observe the importance he attaches to a full allowance of sleep, and exercise in the open air, and, having approved these writings, could name their author in support of any practice opposed to these essential requisites. William Pitt's known approval of the efforts of his friend, the first Sir Robert Peel, is in itself decided proof that the former could not have said to the manufacturers, in the sense conveyed by M. Michelet, "Take the children." The children were taken before "the great duel" was at its height, and William Pitt was no obstacle to their emancipation and

improvement. The respect due to the memory and character of a departed statesman, a sense of the importance of the words of a living historian, full of sympathy for the oppressed of all nations, and the close connection of his statement with the subject under consideration, demand from us, thus early, the remarks we have made. In passing, we cannot avoid observing that all the conditions of health and strength associated with industry, contended for by Locke, were compatible with domestic manufacture as practised anterior to the introduction of complicated machinery and steam power as agents of production. Had British statesmen discovered and applied the means necessary for uniting health and labour under the changed conditions of productive industry, there would not now have existed the necessity for that history which it is our duty to narrate.

The affirmation which we have quoted from a translation of M. Michelet's book, has been adopted and repeated by other French authors of high reputation, and has, consequently, assumed the character of an established truth. Not any statesman ever maintained the industrial rights of the labourers of England more earnestly than did William Pitt; he distinguished himself by his defence of the Poor Law of Elizabeth. So far was William Pitt from saying to the manufacturers of England, "Take the children," that he, on the contrary, contended that every labouring man and his family had a right to be made comfortable in his own dwelling, and actually introduced into parliament a bill, intended to supply every labouring man and his family, when and where required, "with a cow or a pig, or some other animal yielding profit." The industrial schools approved by William Pitt, were entirely opposed in principle and practice to the unregulated factory system. The schools were local and parochial, and in their management health was a principal consideration.

The French authors who have arraigned the character of William Pitt by so serious an imputation on his humanity, and his wisdom as a statesman, have not given their authorities for so grave a charge; in the absence of those authorities the weight of their declaration is lessened. We have been unable to discover any grounds for the accusation, beyond those already named, the misinterpretation of which may possibly have misled M. Michelet and his followers.

A knowledge of the importance of the question of factory labour, and a due appreciation of the efforts to secure factory regulation under the law, require that some of the more prominent facts illustrating the industrial condition of this country anterior to the general introduction and development of the inventions of Watt, Hargraves, and Arkwright should be stated. An understanding of the past is the best key to an apprehension of the present. This maxim has been sanctioned by the experience and example of the wisest among political philosophers. "Antiquity," said Bacon, "deserveth that reverence that men should make a stand thereupon, and discover what is the best way; but when the discovery is well taken then to make progression." A course in itself so necessary and recommended by so great an authority will, we trust, be met by universal approval.

In the year 1764, James Watt, the Scottish machinist, began his improvements of the steam engine. In 1767, James Hargraves, a Lancashire carpenter, invented the *spinning jenny*. These inventions were followed by that of the *spinning frame*, generally ascribed to Richard Arkwright, a native of Preston, and the *mule*, by Mr Crompton, of Bolton. The effects of these improvements in the means of production, by substituting inanimate for animate power, were immense; their social effects, rightly appreciated, were not less remarkable than their productive results. Within the brief period of twenty-one years, namely, from 1764, the date

of the improvements of Watt, to 1785, the time of the introduction of the *mule* of Mr Crompton, the means were invented and applied, which, followed by others of a similar kind, accomplished what no conqueror by the power of armies and the force of decrees could have realized—they changed the personal and relative condition, and, consequently, the habits and character, of numerous sections of the people; they aggregated into a few districts what was formerly a widely-spread cottage industry; they congregated in huge buildings, under no moral control, large numbers of persons of both sexes and of all ages (in the place of domestic cottage employment, under the control and superintendence of parents); in the train of these inventions, and their consequent changes, have followed others which have very materially affected not only the domestic condition of the manufacturing operatives, but the social condition of all engaged in manufacture, whether employers or employed; and also weakened the link which united the labouring population to the Church, and, further, interfered with the practical government of the country.

It is not an easy task for men living in the last half of the nineteenth century, to represent by the aid of knowledge and reflection, within their own minds, the actual circumstances existing in the last half of the eighteenth century. The present is to the majority all-engrossing, it is to them everything, the beginning, the middle, and the end. It is not possible to recall a complete picture of the past, we must be content to state a few prominent facts, and our authorities for the same.

Sir James Stewart, whose *Inquiry into the Principles of Political Economy* was published in the year 1767, has observed:—"Were the people of England to come more into the use of living upon bread, and give over consuming so much animal food, inhabitants would certainly increase, and many rich grass fields would be thrown into tillage.

Were the French to give over eating so much bread, the Dutch so much fish, the Flemish so much garden stuff, and the Germans so much sourkraut, and all take to the English diet of pork, beef, and mutton, their respective numbers would soon decay, let them improve their grounds to the utmost." It will be noted by the reader that Sir James Stewart has said that the diet of the people in England of his time consisted of "pork, beef, and mutton." A better informed, less prejudiced, and therefore more credible witness than Sir James Stewart it would be impossible to produce; he was a keen observer, a man well-travelled and well-read. Adam Smith, in his great work, *The Wealth of Nations*, has borne very ample evidence on what, in recent years, has been comprehensively called "The Condition of England Question." This author, writing antecedent to the year 1776, has said:—"The real recompense of labour, the real quantity of the necessities and conveniences of life which it can procure to the labourer, has, during the course of the present century, increased perhaps in a still greater proportion than its money price. Not only grain has become somewhat cheaper, but many other things, from which the industrious poor derive an agreeable and wholesome variety of food, have become a great deal cheaper." "The common complaint, that luxury extends itself even to the lowest ranks of the people, and that the labouring poor will not now be content with the same food, clothing, and lodging which satisfied them in former times, may convince us that it is not the money price of labour only, but its real recompense, which has augmented." Adam Smith, after having referred to the seven years' war with France, which closed in 1763, has remarked that "though more than 100,000 men, all accustomed to the use of arms, and many of them to rapine and plunder," "were at once thrown out of their ordinary employment," "not only no great convulsion, but no sensible disorder, arose

from so great a change." A circumstance which in itself attested a morally and socially healthful condition of society.

The evidence of Sir James Stewart as to the food of our forefathers in the last half of the eighteenth century is very decided; the evidence of Adam Smith as to their social condition is not less so. How our forefathers were clad and lodged are subjects of interest, and we cannot be justly charged with exaggeration when we state that their linen and woollen garments served to protect them efficiently from the inclemencies and through the changes of the seasons, and with these, as a rule, they were plentifully supplied; it was matter of complaint that luxury had extended "itself even to the lowest ranks of the people, and that the labouring poor would not be contented with the same food, clothing, and lodging which satisfied them in former times." With such testimony before us, we may safely affirm that convenient plenty was at that time the lot of the labouring population of England. Not any one who has profited by the conversations of the aged of both sexes, the latest living links in the chain of generations, serving to bind together the past and the present, will fail to recall the "Goodmen" and "Notable Housewives" as life-like as memory can do; the fathers and mothers of such, he will associate with thrift and comfort. "The spinning-wheel," which was forced from the cottages in all districts, because of the mechanical inventions referred to, was neither offensive to the eye nor the ear, its motion, when in use, was distinctly visible, and its sound not unpleasant. The employment of spinning with the wheel was not opposed to the agreeable exercise of conversation, it was not injurious to health; to the "housewife" it constituted a constant and profitable exercise. Such domestic employment was favourable to the promotion of parental authority and filial obedience, and to the growth of all the domestic sympathies. The gradual acquirement of habits of industry

by children so situated was not inconsistent with the *healthful pleasures* of infancy and childhood. Under such social arrangements, the pastor had a ready access to his flock ; by his visits devotional feelings and moral habits were encouraged.

A tolerably just notion of the effects on the operative classes of the introduction of mechanical inventions in the practice of spinning, may be formed by reading the following resolutions, unanimously adopted at the quarter sessions held at Preston, for the county of Lancaster, on November the 11th, 1779 :—“Resolved that the sole cause of great riots was the new machines employed in the cotton manufacture ; that the county, notwithstanding, had greatly benefited by their erection ; that the destroying them in one county would only be the means of transferring them to another county ; and that, if a total stop were put by the Legislature to their erection in Britain, it would only tend to their establishment in foreign countries, to the detriment of the trade of Britain.” The struggle, for such it must be called, indicated by these resolutions has been of long continuance ; it has not even now closed, the competition of “the iron men” against the men of bone, flesh, and muscle is still a source of controversy and complaint ; the claims of capital, real or supposed, and the claims of labour, real or supposed, are in frequent opposition, of which strife that same town of Preston, so late as 1853, afforded a mournful example.

Dr Aikin, in his description of the country round Manchester (published in 1795), has left on record a graphic and faithful delineation of the results of what is now known as “the factory system” on the health, morals, and character of the labouring population :—“The invention and improvement of machines to shorten labour have had a surprising influence to extend our trade, and also to call in hands from all parts, particularly children for

the cotton-mills. It is the wise plan of Providence that in this life there shall be no good without its attendant inconvenience. There are many which are too obvious in these cotton-mills, and similar factories, which counteract that increase of population usually consequent on the improved facility of labour. In these, children of a very tender age are employed, many of them collected from the work-houses in London and Westminster, and transported in crowds as apprentices to masters resident many hundred miles distant, where they serve unknown, unprotected, and forgotten by those to whose care nature or the law had consigned them. These children are usually too long confined to work, in close rooms, often during the whole night. The air they breathe from the oil, &c., employed in the machinery, and other circumstances, is injurious; little attention is paid to their cleanliness; and frequent changes from a warm and dense to a cold and thin atmosphere are predisposing causes to sickness and debility, and particularly to the epidemic fever which is so generally to be met with in these factories. It is also much to be questioned if society does not receive detriment from the manner in which children are thus employed during their earlier years. They are not generally strong to labour, or capable of pursuing any other branch of business when the term of their apprenticeship expires. The females are wholly uninstructed in sewing, knitting, and other domestic affairs, requisite to make them notable and frugal wives and mothers. This is a very great misfortune to them and to the public, as is sadly proved by a comparison of the families of labourers in husbandry and those of manufacturers in general. In the former we meet with neatness, cleanliness, and comfort; in the latter with filth, rags, and poverty, although their wages may be nearly double those of the husbandman. It must be added, that the want of early religious instruction and example, and the numerous and

indiscriminate association in these buildings, are very unfavourable to their future conduct in life." In an earlier part of the same book, Dr Aikin has observed:—"The prevalence of fevers among persons employed in cotton-mills might be lessened, by the attention on the part of the overseers to the following circumstances. Besides a due regard to ventilation, personal cleanliness should be strongly recommended and encouraged; and the parents of children should be enjoined to wash them every morning and evening, to keep their shoes and stockings in good condition, and above all, never to send them to work early in the morning without giving them food.

"It is greatly to be wished that the custom of working all night could be avoided. The continuance of such a practice cannot be consistent with health, and I am glad to find that it does not prevail universally." The weighty judgment of Dr Kay (now Sir James Kay Shuttleworth) and Mr William Rathbone Greg, at a subsequent period, fully verified the well-founded opinion of Dr Aikin.

It had appeared to the minds of some sincere and able men, in various ranks, that it was possible to retain all the "good" referred to by Dr Aikin, and, at least, to mitigate in an important degree the "attendant inconveniences." It would be a fountain of never-ceasing sorrow, if not any change and increase in the means and powers of production could take place without an increase of human suffering and depravity. If this were indeed an inevitable law, then the genius of man would necessarily be his enemy, for "inconveniences" of the nature and to the extent named, with so much candour and mildness, by Dr Aikin, would, in time, become evils of so great magnitude, as to organically and progressively injure the whole framework of the body politic. The promoters of factory legislation acted under the conviction that the inventions of man are useless, nay worse than useless, injurious, when,

without regard to their personal, domestic, social, political, moral, and religious effect on the people, those inventions are used only as means "to heap up riches," making many poor, that a few may become enormously rich. To enjoy the use, to avoid the abuse of all such improvements, were the objects of the promoters of factory legislation.

Full half a century elapsed between the description of the evils of "the factory system," as witnessed and narrated by Dr Aikin, and the passing of the 'Ten Hours' Bill in 1847. These were upwards of fifty years of efforts on the part of an energetic body of men, who endeavoured to bring factory labour under the control of Christian and constitutional principles. These efforts in the factories, on the platform, through the press, the pulpit, and the parliament, called into existence almost every shade of controversy, religious, moral, social, economical, political, philosophical, and parliamentary; and it is to the sayings and doings of the principal actors in so momentous a conflict, that we desire to devote the following pages.

CHAPTER II.

PARISH APPRENTICES UNDER "THE FACTORY SYSTEM."—ORIGIN OF
FACTORY REGULATION.—RESULTS ON HEALTH AND MORALS.—
PARLIAMENTARY EFFORTS OF THE FIRST SIR ROBERT PEELE.

It has been held by the wisest and greatest of British statesmen that the children of the poor have especial claims on society; in the Church they are recognised as "God's own poor." Under the constitution their rights in former times were especially conserved, and made "part and parcel" of the law of the land. Infancy is the period of life which, because of its helplessness and hopefulness, has especial claims on human sympathies—claims sanctified by the words—"Suffer the little children to come unto me, and forbid them not." There can be no injustice greater than, under any pretext, the sacrifice of helpless infancy—the tearing up of the roots of all the affections which, when cherished, give unto life its dearest and most lasting ties, thus robbing existence of its fairest fruits, forestalling the strength of a state, and trampling under foot all the more sacred duties of life. Man cannot present himself to the consideration of his fellow-man in a more revolting character than when, breaking through all the ties of nature and the most hallowed principles of religion, he ventures for his own lucre's sake to become the ensnarer and oppressor of "the little children." Yet all this was done, under the assumed sanction of law, and by those who claimed for

themselves the protection of the avowedly Christian institutions of England.

When the first factories were erected, it was soon discovered that there was in the minds of the parents a strong repugnance to the employment thus provided for children; the native domestic labourers being then able amply to provide for their children, rejected the tempting offers of the millowners, the parents preferring to rear their children in their own homes, and to train them to their own handicrafts. For a long period it was by the working people themselves considered to be disgraceful to any father who allowed his child to enter the factory,—nay, in the homely words of that day, as will be remembered by the old men of the present age,—“that parent made himself the town’s talk,” and the unfortunate girl so given up by her parents, in after life, found the door of household employment closed against her—“Because she had been a factory girl.” It was not until the condition of portions of the working classes had been reduced, that it became the custom with working men to eke out the means of their subsistence by sending their children to the mills. Until that sad, and calamitous custom prevailed, the factories in England were worked by “stranger-children,” gathered together from the workhouses.

Under the operation of the factories’ apprentice system parish apprentices were sent, without remorse or inquiry, from the workhouses in England, and the public charities of Scotland, to the factories, to be “used up” as the “cheapest raw material in the market.” This inhuman conduct was systematically practised—the millowners communicated with the overseer of the poor, and when the demand and supply had been arranged to the satisfaction of both the contracting parties, a day was fixed for the examination of “the little children,” to be inspected by the millowner, or his agent, previous to which the authorities

of the workhouse had filled the minds of their wards with the notion that, by entering the mills, they would become ladies and gentlemen. On the day appointed, the children were drawn up to be inspected and selected; those chosen were then conveyed by coach, by waggon, or boat, to their destination, and, as a rule, from that moment were lost to their parents and relatives. It sometimes happened that traffickers contracted with the overseers, removing their juvenile victims to Manchester, or other towns, on their arrival; if not previously assigned, they were deposited sometimes in dark cellars, where the merchant dealing in them brought his customers; the millowners, by the light of lanthorns, being enabled to examine the children, their limbs and stature having undergone the necessary scrutiny, the bargain was struck, and those poor "innocents" were conveyed to the mills. The general treatment of those apprentices depended entirely on the will of their masters; in very many instances their labour was limited only by exhaustion, after many modes of torture had been unavailingly applied to force continued action; their food was stinted, coarse, and unwholesome; in "brisk times," their beds (such as they were) were never cool, the mills were worked night and day, and as soon as one set of children rose for labour the other set retired for rest. Discrimination of sexes was not regarded, vice, disease, and death, luxuriated in those receptacles of human woe. We dare not trust ourselves to write all we know on this subject, much less all we feel, the cases stated hereafter are representative of the system. The moral nature of the traffic between parish authorities and the buyers of pauper children, may be judged from the fact that in some cases one idiot was accepted with twenty sane children. A question arises—what was the fate of these idiots?—that secret has not been revealed. "Prior to the show-day of the pauper children to the purveyor or cotton-master," says

the author of the *Memoir of Robert Blincoe*, "the most illusive and artfully-contrived falsehoods were spread, to fill the minds of the poor infants with the most absurd and ridiculous errors as to the real nature of the servitude to which they were to be consigned. It was gravely stated to them, according to Blincoe's statement, made in the most positive and solemn manner, that they were all, when they arrived at the cotton-mill, to be transformed into ladies and gentlemen: that they would be fed on roast beef and plum-pudding—be allowed to ride their masters' horses, and have silver watches, and plenty of cash in their pockets. Nor was it the nurses, or other inferior persons of the workhouse, with whom this vile deception originated, but with parish officers themselves. From the statement of the victims of cotton-mill bondage, it seems to have been a constant rule with those who had the disposal of parish children, prior to sending them off to cotton-mills, to fill their minds with the same delusions."

We have said that such was the general aspect of the factory system in those days,—there were exceptions; some men there are who cannot rid themselves of natural feeling. Of this class there were some factory masters; they had respect to the defenceless state of their apprentices, and signalised themselves by occasional acts of kindness, but even in *their* mills the hours of labour were unnatural and excessive. Cotton factories were established in England towards the close of the eighteenth century, and were rapidly spread over the counties of Lancaster, York, Derby, Nottingham, and other districts; they were usually built on mountain streams, in the more secluded parts of the country. Several were also erected in Scotland, among these was the factory of Mr Dale, of Glasgow. It is very pleasing to know that there were exceptions to the cruelties above referred to, and conspicuously among such must be ranked the factory of Mr Dale.

About the year 1780, cotton factories were introduced into the west of Scotland. In 1784, Mr Dale, a Glasgow manufacturer, established a cotton-mill, near the falls of the Clyde, in the county of Lanark. To found a factory was then far from an easy task. The labouring population of Scotland having been accustomed to comfort, traditionally and by habit to personal freedom, refused to enter the cotton-mills. Close confinement, and long hours of labour, were by the vast majority of the working men and their families detested. Water power was in those days, to the founder of a factory, a condition of primary moment. The banks of the river Clyde, now constituting one of the most populous and best known districts in Scotland, contained in 1784 many a rugged path, seldom trod by the foot of a stranger, and leading to secluded nooks hidden from common gaze. In one of these retired corners was built Mr Dale's cotton factory. Mr Dale applied to the managers of charities, and the parish authorities of Edinburgh, for a supply of children. The application was successful, and the children under Mr Dale's control ultimately numbered five hundred. Mr Dale, in exchange for the services of these children, undertook to feed, lodge, and clothe them. It has been our lot to know two women, who, in early life, had been Mr Dale's apprentices. On the authority of these witnesses, Mr Dale was a man of benevolent disposition, seldom visited his factories; when he did visit them, it was remarked that "things were put in better order," and he sometimes brought the children little presents, and was at heart the friend of his work-people. By way of encouragement to settlers, Mr Dale caused houses to be built at New Lanark Mills, and let them at very low rents, but so great was the aversion of the Scotch peasantry to the then novel system of working in factories, that very few, not being homeless and friendless, would accept of house accommodation from Mr Dale on the lowest possible terms. The ages of the

children when apprenticed to Mr Dale were from five to eight, the period of apprenticeship from seven to nine years, the hours of labour in the factory from six in the morning to seven in the evening. Mr Dale's was one of the most humanely conducted factories in the empire; he was known as one of the most spirited, enterprising, and benevolent men of his age. The following notice of his labours, and their effects, is copied from the *Annual Register*, of 1792: "New Lanark—Mr David Dale, of this place, in the course of six years has reared a village on the banks of the Clyde, containing 2,000 persons; and erected five cotton-mills, each of which contains 6,000 spindles. The various provisions which this extraordinary man has made for the health of the children employed by him are highly praiseworthy. They have every day some hours allotted to them for exercise in the fields, and their looks bespeak health and vigour. These hours of relaxation the boys enjoy in succession, their apartments are likewise cleaned and well aired, and ten schoolmasters are daily employed in their tuition."

These facts will enable the reader to judge of the operation of "the factory system" in Scotland, in its mildest and most attractive form.

On the 21st of May, 1816, the first Sir Robert Peel presented a paper to a Committee of the House of Commons, as "the substance of what he knew respecting the state and management of the cotton manufactories, within the scope of his acquaintance, which was not less than five-and-forty years." From a printed copy of that paper, we make the following extract:—"Mr Arkwright was the inventor of machinery, of great national importance, which was employed at a time when steam power was little known in large buildings, which were erected in situations commanding considerable water power, but generally in country places remote from inhabitants: to work these machines the surplus population of large towns was sought after, and many

thousands of parish children were supplied from London, Birmingham, and other populous districts.

“The house in which I have a concern gave employment at one time to near one thousand children of this description. Having other pursuits it was not often in my power to visit the factories, but whenever such visits were made, I was struck with the uniform appearance of bad health, and in many cases stunted growth of the children; the hours of labour were regulated by the interest of the overseer, whose remuneration depending on the quantity of work done, he was often induced to make the poor children work excessive hours and to stop their complaints by trifling bribes.” This statement of the first Sir Robert Peel will enable the reader to judge of the nature and effects of “the factory system,” as manifested under the authority of one of the most humane employers of parish apprentices in England.

In Scotland and in England there were factories, in comparison with which those of Dale and Peel were highly-favoured retreats, affording to their inmates very superior accommodation and unusual enjoyment. Waggon-loads of little boys and girls were sent by the parish authorities and from the principal towns of England and Scotland to the lonely banks of mountain streams and rivulets, there to undergo hardships and torture, the bare mention of which leaves a lasting impression of horror, and fills the soul with shame for the crimes man has committed against his fellows. Little children have been worked for sixteen hours and upwards, with few and trifling intermissions, day and night have been devoted to almost constant labour; a portion of the Sabbath has been for these helpless ones appropriated to toil. In stench, in heated rooms, amid the constant whirling of a thousand wheels, have little fingers and little feet been kept in ceaseless action, forced into unnatural activity by blows from the heavy hands and feet of the merciless overlooker, and the infliction of bodily pain by

instruments of punishment invented by the sharpened ingenuity of insatiable selfishness. Tens of thousands of "the little children" in those mills have been destroyed because of their owner's lust of gold. The necessities and decencies of life were but little cared for in some cases; in many, fatally neglected. Education was, as a rule, entirely unprovided for. Children have dropped down at their frames exhausted, the fingers of little ones have been snapped off instantly, their limbs have suffered in like manner; there have been living bodies caught in the iron gripe of machinery in rapid motion, and whirled in the air, bones crushed, and blood east copiously on the floor, because of physical exhaustion. We know those who have seen little children standing at their spindles asleep, their little hands and fingers, like the mechanical hands of the automaton, performing their accustomed evolutions among the threads and spindles; it was at such times especially that hands and fingers were lacerated. The factory apprentices have been sold by auction as "bankrupt's effects." The scantiest share of coarsest food capable of sustaining animal life has been day by day doled out to the parish apprentices; in the bothies and outhouses of cotton factories boys and girls, suffering from the unsatisfied cravings of hunger, have watched for the swineherd, have stealthily struggled with the pigs for food, and have been fed upon the purloined contents of the pig-trough. The well-attested memoir of Robert Blincoe contains a circumstantial account which we prefer giving in almost the words of the author:—"The store pigs and the apprentices used to fare very much alike; but when the swine were hungry, they used to grunt so loud, they obtained the wash first to quiet them. The apprentices could be intimidated, and made to keep still. The fatting pigs fared luxuriously, compared with the apprentices. They were often regaled with meal balls, made into dough, and given in the shape of dumplings."

Blincoe and others, who worked in a part of the mill whence they could see the swine served, used to say to one another, '*The pigs are served; it will be our turn next.*' "Those who were in a part of the building contiguous to the pig-sties used to keep a sharp eye upon the fattening pigs and their meal balls, and, as soon as the swineherd withdrew, Blincoe used to slip down stairs, and stealing slyly towards the pig-trough, plunge his hand in at the loop-holes, and steal as many dumplings as he could grasp. The food thus stealthily obtained from the pig-trough was exultingly conveyed to a hiding-place, and there greedily devoured. The pigs, though usually esteemed the most stupid of animals, learned from experience to guard their food by various expedients; made wise by repeated losses, they kept a keen look-out, and the moment they ascertained the approach of the half-famished apprentices they set up so loud a chorus of snorts and grunts, it was heard in the kitchen, when out rushed the swineherd, armed with a whip, from which combined means of protection for the swine this accidental source of obtaining a *good dinner* was soon lost! Such was the contest carried on for some time at Litton Mill between the half-famished apprentices and the well-fed swine."

Some of the helpless victims, though young in years, were old in suffering, and nightly prayed that death would come to their relief; weary of prayer, some there were who deliberately accomplished their own destruction. The annals of Litton Mill afford an instance of an attempt of this kind—one of many, for they were of frequent occurrence:—"Palfrey, the smith, had the task of riveting irons upon any of the apprentices whom the master ordered, and those were much like the irons usually put upon felons. Even young women, if suspected of intending to run away, had irons riveted on their ankles, and reaching by long links and rings up to the hips, and in these they were

compelled to walk to and from the mill and to sleep. Robert Blincoe asserts that he has known many girls served in this manner. A handsome-looking girl, about the age of twenty years, who came from the neighbourhood of Cromford, whose name was Phœbe Rag, being driven to desperation by ill-treatment, took the opportunity one dinner-time, when she was alone, and supposed no one saw her, to take off her shoes, and throw herself into the dam at the end of the bridge, next the apprentice-house. Some one passing along, and seeing a pair of shoes, stopped. The poor girl had sunk once, and just as she rose above the water he seized her by the hair. Blincoe thinks it was Thomas Fox, the governor, who succeeded Milner, who rescued her. She was nearly gone, and it was with some difficulty her life was saved. When Mr Needham heard of this, and *being afraid the example might be contagious*, he ordered James Durant, a journeyman spinner, who had been apprenticed there, to take her away to her relations at Cromford, and thus she escaped."

There are those still living who can point out the spots where there were buried the remains of those who were once their own fellow-companions in wretchedness, but over whose bodies no voice hath said "Earth to earth, ashes to ashes, dust to dust." Many having died in the night, their bodies were stealthily removed, and were buried without ceremony in graves unknown to their former comrades—these bodies were cast into the earth and buried with "the burial of an ass." A clergyman of the Church of England, revered by all who know him, and who has devoted much of his time and attention to a consideration of the condition of the working classes, has favoured us with the following important statement:—

"An instance still living, and of high respectability, may illustrate the practice under the system of unprotected 'factory apprentices.'

“At one of the earliest establishments for spinning by water-power in Wharfedale, Yorkshire, the apprenticeship system had been carried out for some time, when A—— S——’s widowed mother was compelled by want to submit her daughter to the system. Disgraceful as the widowed mother felt it, at that time she had no alternative. The mill was not very far distant from her cottage, but very soon she was compelled to carry her little one to and from it, for it was not possible for the child, without assistance, to reach home in any reasonable time in heavy weather: she was only six years old. This difficulty led the Widow S—— to remove to a cheap tenement, next to one of the ’prentice houses, and there it was that A—— and her mother became fully acquainted with the horrors of that abominable system. One of A—— S——’s statements, confirmed frequently (many years after) by her mother, was, that these wretched victims of heartless avarice, the factory apprentices, were fed chiefly on porridge, which was seasoned with beef and pork *brine*, bought at the Government stores, or those of contractors—the ‘bottoms’ of casks supplied to the navy. This nauseous mixture was sometimes so repulsive, even to hungry stomachs, that it was rejected. Whereupon, the overseer or overlooker was accustomed to stand over the apprentices with an instrument of punishment, a whip, or thong, or cow-hide, as the case might be, and compel them to swallow this disgusting diet. They were fed out of troughs, much resembling those used by pigs. There were among them delicate, intelligent young people, evidently off-casts and outcasts of genteel progenitors, but all wretched and reckless to the utmost degree.

“The deaths which occurred were not unfrequently from cruel punishment, at work, or in the ’prentice house, and were not always followed by any usual mode of burial. A plantation hard by was believed to be the resting-place from their sorrow of many who disappeared. A survivor

of this 'prentice band—'Old Nanny' was her only name—was visited in September, 1833, by the writer, who had been informed by a reputable person that 'Old Nanny' could give information respecting those secret burials, she having related them to him. She was a miserable-looking creature, evidently deformed in the feet from mill work, and when very quietly questioned about the plantation burials, she became highly excited, and said, 'I won't tell you—I can't. Who sent you here? I know nought about it; don't ask me.' Her wild aspect was awful. But what she chose to tell confirmed entirely the statement of A——S——, who was found in a state of emaciated health by the writer, whilst visiting some cottage neighbours in 1827. She was then some thirty years old. At her own request she was taken into the family of the writer to try her ability in domestic service, to which she had been unaccustomed, weaving having recently been her work. Her health rallied a little, but she was never able to fulfil the duties, to which she applied herself very diligently; she at length married a respectable small tradesman, who had been her companion as a child, and when last heard of was living as 'Old A——' in her native village, a few miles from the scene of her early sufferings. Her excellent character and Christian deportment would not allow the writer to doubt her statements. She never related the 'prentice house tales without horror, and used to say that the cries of the poor wretches under the lash of the overseer were heart-rending. She and others had heard them often, especially at feeding-time."

It has been customary to erect monuments for the good and wise, whose memories the living desired should be preserved for ages yet untold. The wicked and the foolish have also their monuments. The greedy and negligent men under whose rule the cruelties of "the factory system," and its worst horrors, were perpetrated, have had, and now

have, *their* monuments, not tall columns, and statues on pedestals, but stunted men and women, twisted spines, distorted limbs, increased crime, and decreased manliness. It was impossible that a system which jested with civilisation, laughed at humanity, and made a mockery of every law of physical and moral health, of the principles of natural and social order, could remain unchecked. It is in the nature of wrong and error to destroy the prey on which they feast, or oblige man to check their force through the operation of preventive laws: overseers, millowners, and statesmen, had failed to fulfil their duties, but disease and death were faithful to their functions. Fever, nourished in the crowded sleeping-rooms, and in the ill-ventilated factories, could not be confined to lonely dells and scattered villages. Fever, and its follower death, are stern messengers, and manifest a wondrous power of locomotion; the first steals along noiselessly and unseen, but in time both are felt. The fevers generated under "the factory system," necessarily caused throughout the districts in which factories were most common very considerable uneasiness, discussions in the newspapers followed, and complaints were made that the hospitals were crowded with factory patients. It is but reasonable to suppose that these discussions led to considerable alarm among the negligent and guilty millowners. Manchester and its district being then, as now, the centre of the cotton manufacture, suffered most from the evils of "the factory system;" there, fever was most common and malignant, not confined to the occupants of the mill, for it had invaded the mansions of the rich; there, consequently, complaints of those not engaged in factories were most frequent, and newspaper controversies most keen. In January 1796, a committee was appointed to superintend the health of the poor in the towns of Manchester and Salford, and commonly designated "The Manchester Board of Health." On the 25th of January, in the same year, Dr

Perceval, an eminent physician of that town, submitted for the consideration of the Board, the following heads of resolutions:—"It has already been stated that the objects of the present institution are to prevent the generation of diseases; to obviate the spreading of them by contagion, and to shorten the duration of those which exist, by affording the necessary aids and comforts to the sick. In the prosecution of this necessary undertaking, the Board have had their attention particularly directed to the large cotton factories established in the town and neighbourhood of Manchester; and they feel it a duty incumbent on them to lay before the public the result of their inquiries:—1st. It appears that the children, and others, who work in the large cotton factories, are peculiarly disposed to be affected by the contagion of fever, and that when the affection is received it is rapidly propagated, not only amongst those who are crowded together in the same apartments, but in the families and neighbourhoods to which they belong. 2nd. The large factories are generally injurious to the constitution of those employed in them, even where no particular diseases prevail, from the close confinement which is enjoined, from the debilitating effects of hot or impure air, and from the want of active exercises, which nature points out as essential in childhood and youth, to invigorate the system, and to fit our species for the duties of mankind. 3rd. The untimely labour of the night, and the protracted labour of the day, with respect to children, not only tends to diminish future expectations as to the general sum of life and industry, by impairing the strength and destroying the vital stamina of the rising generation, but it too often gives encouragement to idleness, extravagance, and profligacy of the parents, who, contrary to the order of nature, subsist by the oppression of their offspring. 4th. It appears that the children employed in factories are generally debarred from all opportunities of education, and from moral or religious instruction.

5th. From the excellent regulations which subsist in several cotton factories, it appears that many of these evils may, in a considerable degree, be obviated; and we are therefore warranted by experience, and are assured that we shall have the support of the liberal proprietors of these factories, in proposing an application for Parliamentary aid (if other methods appear not likely to effect the purpose) to establish a general system of laws for the wise, humane, and equal government of all such works."

These heads of resolutions are important, they are in themselves a condensation of the evils of "the factory system." The natural repugnance of the labouring population to factory labour, had in the cotton districts been partly overcome, and some of the more depraved among parents had begun to live on the wages of the labour of their offspring, an inversion of the order of family economy, which in time was followed by a fearful retribution. The question of factory regulation was thus fairly raised in the heart of Manchester; the conditions, too, under which factory regulation by Act of Parliament was rendered necessary, were in the resolutions of Dr Perceval clearly laid down. These facts scatter to the winds the hacknied, false, and silly charges of the opponents of factory regulation, that it had its origin in the sentimentality of "pseudo-philanthropy, sham humanity, and Samaritanism." They establish the fact that factory legislation had its origin in self-preservation; the enormities of the unregulated factory system having burst their boundaries were already spreading disease and death broadcast, their threatened victims were thereby forced to apply for a power stronger than the will of the factory occupiers. The evils of "the factory system" having become subjects of popular discussion, were from that time destined to command the attention of the Imperial Parliament. Mr Wilbraham Bootle was the first to moot the question in the House of Commons; his efforts, though

they did not result in any practical measure, must have in some degree contributed to prepare the mind of the country and of Parliament for practical legislation. In 1802, the first Sir Robert Peel brought the questions of factory labour and factory legislation under the notice of the House of Commons. The first Sir Robert has left on record the circumstances which induced him to plead the cause of the factory child.

He found the mind of parliament fully prepared for the adoption of the provisions of his bill for "*the preservation of the health and morals of apprentices and others employed in cotton and other mills, and in cotton and other factories*;" his difficulty was not in want of support, but in the urgency of those who supported his efforts. "I remember very well," said he (in 1816) "that in passing that bill (the Act of 1802) I had a great deal of care upon my hands to prevent the manufacturer suffering as well as the apprentice; many gentlemen would have urged me in the most earnest manner to shorten the hours of labour, much below what I thought it proper to shorten them." "I was desired to let that bill operate through every cottage in the country; I deemed that so unreasonable, that I was determined to give up all management of the measure if it was not left to me; in consequence of that, the opposition which arose more from humanity than anything else was withdrawn, and I brought in the bill in the state in which it now appears, without any opposition of any consequence being stated."

There was, notwithstanding, some opposition to the proposed measure. On the third reading of the bill in the House of Commons, which took place on June the 2nd, 1802, some of the opponents of factory legislation having spoken against the measure, the first Sir Robert Peel replied:—"I am sorry to have to address the House again on this late stage of the bill, after so great a majority of

the House and the country had declared in its favour. I confess it does not go to the extent that might be wished, but it is advisable to do as much as can be done in the present instance without venturing on anything like hazardous innovation. The great and first object I had in view in bringing in this bill was to promote the religious and moral education of the children; and in my endeavours to accomplish this end, the measure I hope will prove free from harm, and productive of much real advantage. Without a measure like the present, no gentlemen of weight in the country could visit these mills, even though fevered in them, or other kinds of misery and distress; so that there was no hope without it of introducing any system of wholesome regulations." It was in this spirit and for these objects that the power of parliament was first successfully invoked to protect the young and helpless in the mills. The exposure of the wrongs endured by factory children did much towards immediate improvement.

The bill passed into a law in 1802, and from that period was known as "*an Act for the preservation of the health and morals of apprentices and others employed in cotton and other mills, and in cotton and other factories.*" It enacted, that from and after the 2nd day of December, 1802, all such mills and factories within *Great Britain and Ireland*, wherein three or more apprentices, or twenty or more other persons shall at any time be employed, shall be subject to the several rules and regulations contained in the Act. The principal of these were as follow :—The hours of actual work were limited to twelve per day, reckoning from six o'clock in the morning to nine at night, as the portion of each day during which twelve hours actual labour might be lawfully taken; the Act also provided for the gradual abolition of night work, and that night work in all mills should finally cease in June 1804.

U It provided for the instruction of all apprentices in reading,

writing, and arithmetic, and that one complete suit of clothing shall be supplied to each apprentice once a year. That factories shall be whitewashed twice a year, and at all times properly ventilated; also for the separation of the sexes as regarded sleeping apartments. ⁵At the Midsummer session of each year, in districts in which factories were situated, the Justices of the Peace of these districts were enjoined to appoint two Factory Inspectors, one a Justice of the Peace, the other a Clergyman of the Established Church, the mills and factories under the Act were to be registered annually with the Clerk of the Peace; ⁷the penalty following on the known violation of the Act was a fine not exceeding five pounds nor under forty shillings, at the discretion of the Justices before whom the offender shall be convicted. This Act of Parliament judged by the intention of its promoters deserved the title it assumed, and was designed to "preserve the health and morals" of factory workers.

The thought naturally suggests itself,—What was the cardinal principle which actuated the majority of the Members of the House of Commons, and made them so pressing in their desires to reduce humanity to practice? The answer is important. It was then ruled by the judges that "Christianity is part and parcel of the Laws of England." It was then the current belief of our legislators that all their Acts should be based on Christianity, and consequently that all the arrangements of the internal industry of the country should be subjected to Christianity. Fixedness of purpose and resoluteness of will were then, more than now, the characteristics of British statesmen; the theory was then prevalent that circumstances must be made subservient to principle, it was left to later times to reduce to practice the opposite theory, namely, that principle must yield to circumstances.

The facts of the factories once made known to the

Legislature by an influential Member of Parliament, filled many minds with grief and shame for the past, and made them alive to their duties and responsibilities. They believed that according to the theory of the British constitution the state ought to be Christian; that the increase of knowledge, of science, of art could alone be truly beneficial for all, by being made subservient to the spirit of Christianity. The over-working and cruel treatment of children were opposed to the command "Love thy neighbour as thyself," and were felt to be antagonistic to Christian civilisation, and the majority of the Legislature desired the immediate removal of so grave a reproach. These statesmen did not hope for the regeneration of society by any new discovery of principles or plans; they were contented to travel in "the old paths," and to contemplate the probable future of their country while standing on the landmarks of the past. These convictions may by some among modern political economists be considered erroneous, and find a place in their list of "obsolete prejudices;" these convictions were conscientiously entertained, the efforts made to reduce them to practice were creditable to the actors, and deserve from all the respect due to practical sincerity.

CHAPTER III.

THE NEW LANARK MILLS. — MEETING OF SCOTTISH MANUFACTURERS IN GLASGOW. — REPEAL OF THE IMPORT DUTY ON COTTON. — BEGINNING OF THE TEN HOURS' BILL MOVEMENT.

IN tracing the history of a nation's civilization, it is interesting to observe the struggles between the acknowledgement of sound maxims in theory and their violation in practice. English literature is replete with the acknowledgement that man considered physically, mentally, and morally, deserves the constant watchfulness of philosophers and statesmen, and that there is no surer or speedier road to national ruin than the sacrifice of the physical strength and moral worth of a population. This universal acknowledgement, notwithstanding, there has been in all ages a desire manifested for an opposing practice, and on the balance existing between the forces of truth and error depends the strength or weakness of a State. This view of a nation's interests commanded the attention of the supporters of factory regulation, and was prominently set forth by the leaders of the question in and out of Parliament.

Mr Dale, of Glasgow, sold the New Lanark Mills; Mr Robert Owen and partners, of Chorlton Mills, Manchester, were the buyers. Mr Owen, subsequently well-known as "Owen of Lanark," entered in 1799 on his official duties as Resident-Manager of the New Lanark Mills. Mr Owen had not then in public denounced what he afterwards de-

clared to be "the errors of all the religions in the world." Mr Owen was then known as an efficient and practical Manager of Factories. He had not been long resident at New Lanark when he introduced important changes, intended to improve, physically and morally, the condition of those under his control. Mr Owen's experiments at the New Lanark Mills were introduced and conducted with the most scrupulous regard for the religious opinions of all concerned; their success, together with Mr Owen's writings in the Press, earned for him the sympathy and approbation of many able and influential men without distinction of creed, rank, or party.

The kind of religious instruction imparted to the children at the New Lanark Mills will be understood by the reading of the following extract, from the evidence given by Mr Owen before a Committee of the House of Commons, in 1816:—

"What religious instruction do you give the children?—They have the same religious instruction in the Schools of New Lanark as in all the other schools in Scotland.

"Do they regularly attend Church on Sundays?—Those that are old enough and have accommodation in the parish or other churches, which are all a mile distant, very generally attend.

"What age do you think them old enough at?—That depends very much upon the opinion of the parents and the inclination of the children; but there is a Sunday-school also open three times a day; the young children under ten years of age, who are considered too young to go to church, and particularly to walk through snow and bad weather in winter, attend the Sunday-schools for two hours in the forenoon and two hours in the afternoon; the young persons who are more advanced in life, and who may not have accommodation in the parish church or in

the public chapels, have an opportunity of meeting on the Sundays.

“Are they examined as to their improvement in religious knowledge?—They are.

“By whom?—By the parish minister.”

In 1813, Mr Owen addressed a letter to the owners and superintendents of manufactories, in which he with confidence and satisfaction referred to his own efforts to improve the workpeople of the New Lanark Mills. The spirit which pervaded and the objects contemplated by the publication of this remarkable letter may be understood by the reading of the following extracts :—“Shall, then,” said Mr Owen, “large sums of money continue to be expended to procure the last devised mechanism of wood, brass, or iron; to retain it in perfect repair; to provide the best substance for the prevention of necessary friction, and to save it from falling into premature decay? Shall years of intense application be devoted to understand the connection of the various parts of these lifeless machines, to improve their effective powers, and to calculate with mathematical precision all their minute and combined movements? And (when in these transactions time is estimated by minutes, and the money expended for the chance of increased gain by fractions), shall not some attention be afforded to consider whether a portion of time and capital could not be more advantageously employed to improve the living machines?”

. “Since the general introduction of inanimate mechanism into British manufactories, man, with few exceptions, has been treated as a secondary and inferior machine; and far more attention has been given to perfect the raw materials of wood and metals than those of body and mind. Give but due reflection to the subject, and you will find that man, even as an instrument for the creation of wealth, may still be greatly improved.” At a meeting of

the Scottish cotton-spinners, held in Glasgow in 1815, Mr Owen proposed that the cotton-spinners and manufacturers of Scotland should solicit the Government to repeal the import duty on cotton of fourpence and a fraction per pound, and, as a *contemporaneous measure*, enact a law limiting the ages at which children should be employed in factory labour, to reduce the working hours to ten per day, and to render instruction in reading, writing, and arithmetic compulsory; in fact, to establish an educational test as a condition to precede employment in factories. The resolution for the abolition of the import duty on raw cotton was unanimously adopted; that in favour of the limitation of the ages at which it should be lawful to employ children in factory labour, the limitation of the hours of labour, and the application of an educational test to those seeking employment in factories, was rejected. Mr Owen subsequently published a letter in the newspapers, addressed to the chairman of the meeting of the Scottish cotton-spinners and manufacturers, setting forth his reasons for both resolutions. The Government repealed the fourpence per pound import duty on cotton, and retained the fraction. Mr Owen resolved to persevere in his efforts to obtain, through the medium of parliament, a Ten Hours' Act. In pursuance of this object, he had interviews with the leading members of both houses of parliament. Through Mr Owen's exertions several meetings of the most active members of the House of Commons were held in London. The objects of these meetings were to consider the condition of factory workers, and the propriety of factory regulation by Act of Parliament. At one of these meetings the draft of a bill, prepared by Mr Owen, was adopted as the basis of future action. At the request of Mr Owen and others, the first Sir Robert Peel agreed to re-introduce the questions of factory labour and factory regulation to the notice of the Legislature. It was not remarkable that

the first Sir Robert Peel should have been chosen to lead in parliament on the factory question. He was the most prosperous and experienced cotton-spinner distinguished by a seat in the House of Commons, a practical and clear-headed speaker. His decided success as a cotton-spinner gave to his words additional weight on all that related to cotton manufacture; the ease and satisfaction with which he carried his Bill of 1802 through parliament warranted the hope of speedy success. Between 1802 and 1815 a very decided change had taken place as regarded the cotton manufacture and those employed in mills. This change has been very distinctly stated in the first Sir Robert Peel's paper, "*the substance*" of his "*five-and-forty years'*" experience. "Large buildings," said the first Sir Robert, "are now erected, not only as formerly on the banks of streams, but in the midst of populous towns, and instead of parish apprentices being sought after, the children of the surrounding poor are preferred, whose masters being free from the operation of the former Act of Parliament are subjected to no limitation of time in the prosecution of their business, though children are frequently admitted there to work thirteen or fourteen hours per day at the tender age of seven years, and even in some cases still younger. I need not ask the Committee to give an opinion of the consequence of such a baneful practice upon the health and well-being of these little creatures." . . . "I most anxiously press upon the Committee that unless some parliamentary interference takes place, the benefits of the Apprentice Bill will soon be entirely lost, the practice of employing parish apprentices will cease, their places will be wholly supplied by other children, between whom and their master no permanent contract is likely to exist, and for whose good treatment there will not be the slightest security. Such indiscriminate and unlimited employment of the poor, consisting of a great proportion of the inhabitants of trading districts,

will be attended with effects to the rising generation so serious and alarming, that I cannot contemplate them without dismay, and thus that great effort of British ingenuity, whereby the machinery of our manufactures has been brought to such perfection, instead of being a blessing to the nation will be converted into the bitterest curse." The deteriorated condition of the population of the factory districts was a fact within the experience of the first Sir Robert Peel, and, naturally, filled his mind with serious apprehensions. He had watched the downward progress; had witnessed the aversion of the working classes to send their children to the factories; had marked that aversion yield, of necessity, to a forced compliance; had observed the progress of a system which in practice supplanted the labour of parents by that of children; his keen perception enabled him to apprehend that, eventually, the places of the factory apprentices would be taken by the children of the neighbouring working population; to such children he was anxious to extend the legal protection which had proved beneficial to the factory apprentices. The lesson is instructive, and deserves the attention of those statesmen who pretend to have discovered that unchecked and acknowledged evils contain within themselves their own remedies.

The actual change in the circumstances of the cotton manufacture, so simply and graphically stated in the expressive words of the first Sir Robert Peel, fully warranted the proposed change in the regulation of factories. The first Sir Robert Peel, and Mr Owen, were agreed on the desirableness of factory regulation, and the attention of both, though unknown each to the other, had been directed to the great fact that a new and great power had been introduced into the national economy, for whose entrance and development not any provision had been made. Both were conscious of the nature of the evils likely to flow from the unregulated introduction and development of

mechanical power. The first Sir Robert Peel was as ardent an admirer of genius as any modern political economist, but his vision was not darkened by the mechanical ingenuity he observed and admired; and he rightly apprehended that that which might under some circumstances be a great and positive blessing, might under others be converted into "the bitterest curse."

Under the force of these convictions, preparations were entered into for bringing one of the most important and most disputed questions of the past and present ages under parliamentary discussion. It is not unreasonable to suggest that neither the first Sir Robert Peel, nor any of his supporters, foresaw the long and arduous struggle that awaited their followers in and out of parliament. The actual evils, as witnessed by themselves, the first Sir Robert Peel and Mr Owen knew, and they hoped for the speedy success of their remedial efforts. The extent and full force of the evils of the factory system, in all their varied ramifications, as subsequently made known by searching inquiry, certainly few men could have conceived.

The recorded experience of the first Sir Robert Peel on all that related to the past is invaluable; although even in the past that experience was by himself declared to be limited within a comparatively narrow range. If under the benevolent rule of Mr Dale evils did exist, sufficient in enormity and magnitude to quicken into active life the naturally mechanical mind of Mr Owen, and force it to search for a remedy, if that remedy readily recommended itself to the wary and ripened judgment of the first Sir Robert Peel, the mind accustomed to contemplate the proneness of the human heart to become hardened by the constant practice of cruelty and continuous association with misery, may, by imagination and reasoning, be enabled to approach the possibility of the horrors to which helpless children enclosed within the walls of cotton factories were sometimes

subjected; but even these reasoners would fail fully to comprehend the reality, until made plain to the understanding by the penetrating force of untiring investigation. It will for ever remain creditable to the judgments of the first Sir Robert Peel and of Mr Owen, that they boldly raised the question,—Whether a system which sacrificed man to aggregated productive power, health and morals to mammon, ought, unimpeded, to establish its iron sway over hundreds of thousands of human beings? It is to the honour of the better qualities of the human heart, and may be, perhaps, profitably remembered in this age, when “the separation of classes” has, because of its prominence, become to the bench, the pulpit, and the press, subject of exposition, lamentation, and reproach, that a millowner and a capitalist was the projector of the Ten Hours’ Act, and one of the same class its first leader in the House of Commons. These were followed by others, not less remarkable for their desires practically to benefit the whole factory population, consistently with the interests of their country. The good services of all such ought assuredly to be placed on record.

Concurrently with the arrangements entered into with the leading members of the House of Commons, the first Sir Robert Peel, on June 6th, 1815, reintroduced the questions of factory labour and factory regulation to the notice of parliament. The following report of the speeches then delivered cannot now fail to be of interest to all whose duties or studies have led them to consider the past and present condition of the labouring population of this country.

“APPRENTICES IN COTTON MILLS.

“Sir Robert Peel called the attention of the house to the expediency of some legislative regulation, for the purpose of restricting the employment of young children in manufacturing labour. It was well known that a bad practice

had prevailed, of condemning children, whose years and strength did not admit of it, to the drudgery of occupations often severe, and sometimes unhealthy. What he was disposed to recommend was, that no children should be so employed under the age of ten years, either as apprentices or otherwise, and the duration of their labour should be limited to twelve hours and a half per diem, including the time for education and meals, which would leave ten hours for laborious employment. The accounts he had recently seen, showed that it was not so much the hardship as the duration of the labour, which had produced mischievous effects on the health of the rising generation. It was to be lamented, however, that the inspectors, appointed under a late Act, had been very remiss in the performance of their duties. He should, in consequence of this misfortune, propose that proper persons be appointed at quarter sessions, and that they should be paid in due proportion for their trouble. It was gratifying, however, to learn, that the loss of life had been exceedingly small, not exceeding one per cent. per annum; a loss falling short of the average loss sustained in every other class of manufacturing industry. As he was desirous that the measure he was now suggesting should be put into the most perfect state that was attainable, he should submit that the bill for which he intended to move should be read a first time, and then printed. During the recess it might be circulated through the country, and receive the proper amendments. It could, if it should be found necessary to guard against the arts of designing men, be afterwards made a part of this bill,—that no engagement contracted after this period, in violation of the provisions of the bill, should be lawful. Under these considerations, he moved for leave to bring in a bill, ‘to amend and extend an Act, made in the 42nd year of his present Majesty [George the Third], for the preservation of the health and morals of apprentices, and others em-

ployed in cotton and other mills, and cotton and other factories.'

"Mr W. Smith expressed his cordial approval of the bill, &c.

"Mr Horner observed, that the former measure, and even the present bill, as far as he could understand its object, fell far short of what parliament should do on the subject. The practice which was so prevalent of apprenticing parish children in distant manufactories, was as repugnant to humanity as any practice which had ever been suffered to exist by the negligence of the Legislature. These children were sent often one, two, or three hundred miles from the place of their birth, separated for life from all their relations, and deprived of the aid and instruction which in their humble and almost destitute situation they might derive from their friends. The practice was altogether objectionable on this ground, but even more so from the enormous abuses which had existed in it. It has been known that with a Bankrupt's effects, a gang, if he might use the word, of these children, had been put up to sale and were advertised publicly as part of the property. A most atrocious instance had been brought before the Court of King's Bench two years ago, in which a number of these boys, apprenticed by a parish in London to one manufacturer, had been transferred to another, and had been found by some benevolent persons in a state of absolute famine. Another case more horrible had come to his knowledge while on a Committee up-stairs; that not many years ago an agreement had been made between a London parish and a Lancashire manufacturer, by which it was stipulated that with every twenty sound children one idiot should be taken! A practice in which there was a possibility that abuses of this kind might arise should not be suffered to exist, and now, or in the next

session when the bill should be discussed, should meet with the most serious consideration.

“Leave was given, and the bill was afterwards brought in and read a first time.”

The renewed exertions of the first Sir Robert Peel, in 1815, called into existence the germs of what subsequently became an active opposition. Those among the millowners who were opposed to factory regulation, used their energies to delay the passing of the Ten Hours' Bill, as introduced to the House of Commons; their supporters in parliament were successful in persuading the first Sir Robert to abandon his design of immediate legislation, and to move for a Committee of Inquiry. He was ever anxious to conciliate his opponents, a desire very creditable to his heart, but in the then existing state of parties by no means favourable to the speedy success of the measure of which he was the exponent. To the anxiety of the first Sir Robert Peel to conciliate opposition, then comparatively powerless in numbers and influence, may be attributed in a great degree the protracted struggle for factory regulation. He was conscious of the justness and practical utility of the cause he advocated, and like many other men of good intentions, gave to opponents credit for openness to conviction and conscientious candour not always well placed. Boldness and rashness in legislation have been the prolific parents of many evils; some evils have been prolonged from the want of steadfast energy in those who desired their suppression. It is a misfortune greatly to be regretted, that men of enlarged experience and known integrity, who have introduced to the notice of Parliament necessary remedial measures for positive social evils, have frequently increased their own labours and the labours of others, from the fear of giving offence. This was the case with the first Sir Robert Peel: he made concessions to

opponents who sought for and used those concessions, not to discover the truth, but as a means of delay necessary to enable them to organise and direct a previously-conceived scheme of opposition. The first Sir Robert Peel, having listened to the counsels of timid friends and the solicitations of known opponents, abandoned the thought of immediate legislation, and resolved on a motion for inquiry. On April the 3rd, 1816, he consequently moved for the appointment of a Committee to consider the state of the children employed in manufactories. The perusal of the debate that followed the motion in the House of Commons will unfold the growing importance of the question. Factory legislation, principally because of the rapid expansion of the interests thereby affected, had become a subject of national moment.

“STATE OF CHILDREN IN MANUFACTORIES.

“Sir Robert Peel rose, in pursuance of a previous notice, to submit a motion to the House respecting the state of children employed in cotton manufactories. The object of his motion was altogether national, as it affected the health and morals of the rising generation, and went to determine whether the introduction of machinery into our manufactories was really a benefit. The principal business in our cotton manufactories was now performed by machinery, and of course interrupted the division of work suitable to the respective ages, which formerly was practised in private houses. The consequence was that little children of very tender age were employed with grown persons at the machinery, and those poor little creatures, torn from their beds, were compelled to work, even at the age of six years, from early morn to late at night, a period of perhaps fifteen or sixteen hours ! He allowed that many masters had humanely turned their attention to the regulation of this practice ; but too

frequently the love of gain predominated, inducing them to employ all their hands to the greatest possible advantage. Some time ago he had introduced a bill into the House for regulating the work of apprentices, which was attended with the happiest results, and their time was limited; but children were still subjected to all the hardships to which carelessness or cupidity might expose them. The House were well aware of the many evils that resulted from the want of education in the lowest classes. One object of the present bill was to enable manufacturing children to devote some of their time to the acquirement of a little useful simple knowledge, such as plain reading and writing. He hoped those poor children would experience the protection of the House, for if it were not extended to them all our excellent machinery would be productive of injury. It might, perhaps, be said that free labour should not be subjected to any control; but surely it could not be inconsistent with our constitution to protect the interests of those helpless children. The honourable Baronet concluded with moving that a Committee be appointed to take into consideration the state of the children employed in the different manufactories of the United Kingdom, and to report the same, together with their observations thereupon, to the House.

“Mr Finlay defended the character of the cotton manufacturers as a body. He would venture to affirm that the cotton mills of Glasgow were not only situated most advantageously for health, but were conducted on the most liberal plan.

“Lord Lyttleton said, he was persuaded it would be found impossible, when the committee went into the business, to apply such a bill as was brought forward last session to all the manufactories in the kingdom.

“Mr Curwen took that opportunity of protesting against the principle of legislation for the regulation of the authority

of parents over their children, who must be best aware of the quantity of work those children were able to bear, and who must undoubtedly feel most for their distresses. Such a proceeding was a libel on the humanity of parents. He had, however, no objections to a committee.

“Mr Gordon earnestly supported the motion.

“The motion was agreed to, and a committee appointed.”

It is a law of nature that parents should love their own children, but the perversion of that law is of frequent occurrence, and confined to no race or country. Mr Curwen indicated what parents ought to do, which was not a satisfactory answer to the first Sir Robert Peel, he having rested his efforts for compulsory regulation on an acknowledgement of duty, and *his own knowledge of its non-fulfilment*: in some cases the parents themselves were not free agents, they having had the value of their own labour reduced by the introduction of machinery, not a few having been forced into unwilling idleness, sought for, and found a defence for the cruel injustice done to their children, in the sense of their own undeserved poverty. Mr Curwen, in common with many others, failed to perceive that factory legislation was necessary because of the palpable violation of the laws of nature—a truth, the want of the perception of which was a stumbling-block in the path of improvement.

CHAPTER IV.

NATURE OF THE EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE
OF 1816.—CONDITION OF CHILDREN EMPLOYED IN FACTORIES.—
STATE OF THE QUESTION.

REASONABLE men habitually accept the judgment of those who, from their special studies and experience, understand special subjects. This is the homage which common sense pays to scientific knowledge, and it may be ranked amongst the "signs of the times" that this kind of homage is not on the increase; Mammon-worship has usurped the place of the respect due to solid acquirements and scientific research. Unverified theory is frequently preferred to the decided convictions of the ablest professional authorities, and subjects of the most vital moment are viewed through the lens of self-interest. The results are in keeping with the process; the mystifications, incongruities, and contradictions consequent are appalling. It is not any longer considered to be the duty of a statesman to understand principles, or to endeavour to be guided by the voice of experience; society pays heavy penalties for the empiricism and inconsistencies of its chosen guides. The propounders of factory legislation were not of this class; they knew that safe action could only follow from sound judgment, and they were guided by that knowledge:—"The wisdom of the prudent is to understand his way;" the result of extended experience; "but the folly of fools is deceit."

The principal members of the medical profession have rightly earned for themselves a distinguished post among the leaders of every social improvement. Quackery, it must be owned, is everywhere too common; it is an old disease, having its origin in audacity and ignorance, and is not by any means easily eradicated. The most intense study, the widest experience, and the closest observation of all that relates to life, health, and disease, are the requisites of an efficient physician. In proportion as the union of these requisites in the same person is rare, and when existing, important, so is the worth of his testimony. This being so, it was but reasonable that among the witnesses examined before the Select Committee of the House of Commons, appointed in 1816, to take evidence on the state of the children employed in the manufactories of the United Kingdom, should have been the most eminent medical men of the time. The importance of such evidence it is almost impossible to over-rate; from knowledge or experience, the witnesses were eminently qualified to give sound opinions on the subjects brought under their consideration by the members of the committee. These subjects having been life, health, disease, and their principal coincident conditions, have not, with the lapse of time, lost any portion of their value. We feel that it is due to the memories of medical authorities so distinguished, to give portions of their evidence in their own words.

“ASHLEY COOPER, Esq., called in and examined:

“You are by profession a surgeon?—Yes.

“You have had very great experience in your profession?
—Yes.

“Has your attention been directed to children in the course of your practice?—Yes, certainly.

“At what age may children, without endangering their

health, be admitted to close labour for thirteen hours per day?—I think at no age.

“What is the length of the day that you would recommend?

“Upon a subject of this kind one must answer upon general principles; for the preservation of health three things are certainly necessary, air, exercise, and nourishment; and I conceive that if a child has not a due proportion of exercise, if it is confined for a great number of hours in air of a certain temperature, and if it has not a proper proportion of nourishment, it cannot be in health.

“Do you not think that the labour many children in manufactories undergo is of itself sufficient exercise to answer the purposes of health?—Not if it is in a confined situation.

“Do you think that children, of from seven to ten years of age, can be employed more than ten hours per day without injury to their health?—I think not.

“What do you consider to be the effect upon the development and growth of the bodies of children from six to ten years of age, if so many hours of confinement are imposed upon them?—The result of confinement, commonly, is not only to stunt the growth, but to produce deformity; and to that point I can answer, from a good deal of experience, that deformity is a common consequence of considerable confinement.

“What is your opinion as to the effect of confining children of from six to seven years of age in manufactories, with all the circumstances attendant, where they work, chiefly standing, from fourteen to fifteen, and sixteen hours a-day?—That it must be very injurious to general health.”

“SIR GILBERT BLANE, Baronet, M.D., called in and examined :—

“You are by profession a physician?—I am.

“It is well known you have had much experience in your profession?—I have.

“Supposing that children are employed in close rooms, regularly day by day, for thirteen hours and a half, one hour and a half being occupied in meals, is it your opinion that the children so employed at the early age of from six to twelve would receive no injury in their health?—It is necessary I should premise, I have no experience as to manufactories, and, therefore, my answer must depend on general analogy. From what I have observed in the course of my experience, for the last three and thirty years, in all ranks, and from being twelve years physician to one of the largest hospitals in London, I certainly should say it was greatly too much for the health of children. My grounds of inference are founded on the natural appetency of all young creatures to locomotive exercise, and the open air; from what I have witnessed in the lower orders, and particularly from the bills of mortality in this town, in which I have observed, in the course of the last century the mortality diminished from one in twenty to one in thirty-eight; and upon casting my eyes upon the different periods of life, I find that the great difference has arisen from the diminished mortality of children: and this diminished mortality has, I apprehend, arisen from children being brought up in purer air, with more cleanliness and greater warmth; that cleanliness, warmth, and ventilation, are the great causes of the health of young persons, and to which the diminution of mortality, in this metropolis, has been chiefly owing. The diminution of mortality in grown persons has been owing chiefly to the same causes, preventing the generation and propagation of infectious fevers.” Testimony to the same effect was given by Christopher Pemberton, Esq., M.D., and

George Leman Tuthill, Esq., M.D. The next important portion of the inquiry was, in what degree do the necessary conditions for health and strength exist? In a tabular statement of the hours of labour in forty-three cotton factories in Manchester and neighbourhood, made by the proprietors of the factories referred to, the actual hours of work per day were 12, $12\frac{1}{2}$, 13, and 14,—one $14\frac{1}{2}$, and one $10\frac{1}{2}$. This labour was performed in an atmosphere of from 70 to upwards of 78 degrees, often in ill-ventilated rooms. These conditions were incompatible with health, and there was no lack of circumstantial evidence proving the soundness of the judgment expressed, from a knowledge of natural laws, by the most eminent medical authorities of the age. Mr Kinderwood, a surgeon, whose practice was confined exclusively to Oldham and district, gave the following evidence:—"Have you perceived any effect on the digestive organs from employment in cotton factories?—The digestive organs become debilitated with the other parts of the system: it is a function that is easily injured; a child may eat a sufficient quantity of food, and not turn it into nutrition. If there is not a digestive power in the stomach, no matter what food he takes, the food is not converted to nutrition, he does not get any flesh." Mr Kinderwood also spoke as to the prevalence of scrofula and consumption, to the frequent occurrence of serious and fatal accidents from unfenced machinery and low-roofed mills. The following extract of Mr Kinderwood's evidence is important, in so far as it relates to exercise, rest, and meals:—"As far as you have had opportunities of observing, are the children universally kept to their employment without relaxation; during the hours of work before and after dinner?—The most common thing is to have breakfast sent, during which the machinery is working; but I have stated, I think, there is one mill where there is a recess from the mill for breakfast, and they go out for twenty minutes, the same in the afternoon for bagging (tea-drinking) as it is termed.

“You mean a sort of watering time, or for refreshment?—Yes.

“Is that usual in other mills in that neighbourhood?—I mention it as a singular instance.

“In those mills where the children are kept in to breakfast, and where no time is allowed in the afternoon, do you know whether the children are kept constantly at the employment between the meals?—Certainly, they are kept constantly at the employment, for they eat the breakfast with the machinery employed which they are paid to look after; perhaps one child may look after the machinery of another, and the compliment may be returned, I do not know how that is.”

Mr Bill, a Manchester surgeon, of twenty years experience in the Manchester infirmary, had been long seriously impressed with a sense of the ill effect of spinning-factories, “both as to health and morals.” “These works crowded the Infirmary with patients.”—Mr Boutflower, a surgeon resident in Salford, forwarded a paper which was given in evidence as follows:—“That of seven or eight thousand patients who are annually admitted to the Manchester Infirmary, one half of the surgical complaints are scrofulous. A difference very striking occurs at Liverpool: in a report of 15,000, only 152 are marked as scrofulous.”—Mr Simmons, senior surgeon of the Manchester Infirmary, having had in that capacity an experience of twenty-five years, also gave very decided testimony on the evil effects of factory labour on health.

Of late years Manchester has become celebrated for educational efforts; public schools, rival schemes for educating the young, free libraries, lecture halls, and reading rooms, bear witness to the enterprise of rival sects and parties, and warrant the belief that many have found out “that the soul to be without knowledge it is not good.” One of the effects of the factory system, as stated in

evidence before the committee of 1816, was, to lessen the opportunities of education afforded to the young. Convenient schoolrooms had been erected for the instruction of the children of the labouring population in reading, writing, and arithmetic, but the forms were not half filled, the Lancasterian and National schools of other towns in which factories had not been erected commanded a much better attendance. In Manchester the average time of attendance at the Lancasterian school was about four months, at Newcastle-on-Tyne four years; "the sole reason of which was that the parents of the children in Manchester were tempted to send the children to the works at an early age (for there was no limitation by law), and, on the contrary, there was no inducement at Newcastle for the employment of children under twelve, thirteen, and fourteen, and therefore they remained during that period, upon the average, in the school."—Before the committee much evidence was given on the habits of persons employed in factory labour.—Mr Nathaniel Gould, a Manchester merchant of great respectability, and who for thirty years had attended to the religious, moral, and social condition of his humbler fellow-citizens, made known the results of his careful and lengthened observation. Mr Gould, on being asked his opinion on the causes that prevented children engaged in factory labour from attending Sunday schools, answered :—"There are two causes : the one is, I think, that the parents of the children that do not work in factories, are more attentive to their children, than those whose children do work in factories ; I am speaking generally on this. The other great cause, in my mind, is, that the children having been confined so very much in the factories all the week, have less inclination to go to the Sunday schools, as well as their parents to send them ; I think it is natural for many parents to wish their children to be as much as may be

in the open air on the Sabbath-day, in order that they may get some strength against they begin the work next week, and recruit themselves a little.

“Have the children at Manchester, who work in factories, any means of instruction after they enter the factories, except what they derive from the Sunday schools?—The length of their time of labour in the week-days precludes all chances of any other opportunity than Saturday evenings, when it seems too much to expect or wish them to go to a school, and the only schools I have heard of for the occasion are two in connexion with Sunday schools, the scholars of which amount together only to about 170.” Mr John Moss, who had been from February 1814, to March 1815, master of the apprentices at a cotton-mill—Backbarrow—had on one occasion known children work from eight on Saturday night to six on Sunday morning; the same children had resumed work at twelve o’clock on Sunday night, and worked until five in the morning. Every Sunday children were employed in cleaning the machinery; their orders were to work from six to twelve—had known children work for three weeks together, from five in the morning until nine or ten at night, with the exception of an hour for meals—had frequently found the children asleep upon the mill floors after the time they should have been in bed. Injuries from machinery often occurred—several of the children were deformed. The same causes which operated to prevent the attendance of children at Sunday schools contributed to prevent their attendance at churches and chapels.” On the authority of Mr Nathaniel Gould, and other witnesses, a considerable proportion of the whole rising population of Manchester, and district, received but a very limited secular education, and were shut out from the force of religious influences conveyed through the means of Sunday school and pulpit. The witnesses stating these facts, reasonably therewith, con-

cluded that there were among the factory population with whose circumstances they were familiar, an increased, and increasing, depravity of character and morals.

Not any stronger proof could be given of an utter want of common sense and self-reliance on the part of a nation, of the power of money over the mind and morals, than the fact that it was found necessary to examine medical witnesses to prove that cleanliness, and exercise in the open air, were necessary for the health of children. Any cottager's wife could have settled the question. Who that ever nursed a child could doubt that close confinement, excessive labour, and a tainted atmosphere, were injurious to health? Selfishness and obstinacy could alone require so uncalled-for an exhibition of physiological knowledge—instinct itself had, from the birth of the first living animal, proved all that reason, humanity, and science, had contended for. These circumstances notwithstanding, so darkened and perverse were the minds of the opposing millowners, that they hoped to shake the confidence of intelligent men in the laws of nature, and to over-rule the force of the highest authorities by an array of testimony opposed to nature, facts, and reason. The evidence hitherto stated on the evils of "the factory system" could, to a just and comprehensive mind, lead to only one conclusion, namely, the desirableness of improvement. Numerous sections of the owners of factories had become alarmed, they conceived that "their craft was in danger," had prepared for the production of witnesses, intended to prove very different results from those in the preceding pages. Mr William Taylor, manager "of a considerable part of the spinning concerns of Horrocks, Miller, and Co., of Preston," and who represented before the committee twenty-four cotton-factories (being, in fact, the deputy of the cotton-spinners of Preston and neighbourhood, with two exceptions), was opposed to all parliamentary interference, he thought it

would "create great misunderstandings and unhappiness in families." The firm with which Mr Taylor was connected at Preston, had factories in various towns of the county of Lancaster, and employed 7,000 persons, and his evidence had been prepared with much care, intended to prove that employment in cotton factories was not, more than other employments, injurious to health or morals, but on the contrary, individually and nationally advantageous.

Mr William Sandford, a Manchester cotton-spinner, produced before the Committee a tabular statement intended to prove the superiority of the health of children employed in factories over those employed in other trades. From the *data* on which Mr Sandford based his calculations, "the balance of health in favour of factories in money appeared to be as three shillings are to two shillings; the balance of health in favour of factories in number of persons, as five to four." Mr Sandford produced a document signed by the head master and principal visitor of a Sunday school in Manchester, showing that the children that work in factories were "equally *regular* (or more so) in their *attendance*, more clean in their *persons*, more *orderly* in their *conduct*, and better *clothed* than those who did not." Mr Hollis, a Nottinghamshire manufacturer, was of opinion "that the children employed in his own manufactory were in a trifling degree inferior in point of appearance to those children in the neighbourhood belonging to farmers and agriculturists, but they were equally healthy." Mr Hollis handed in documents signed by clergymen, magistrates, and others, setting forth the excellent condition of all employed in cotton factories in various parts of the counties of Nottingham and Derby.

Mr Augustus Lee, of the firm of Phillips and Lee, Manchester, was of opinion that the reduction of the hours of labour would be injurious to the morals of the factory workers of Manchester, and "perhaps injurious to the

tranquillity of the town." Mr Augustus Lee, from "long experience and observation in cotton mills," was of opinion "that an attempt to regulate free labour by legislation would in its consequences inflict the severest injury upon the class of persons it was designed to serve; that the alleged evils principally arising from the difference of skill, care, and management, would have their best remedy in the direct interests of the parties concerned, which has been exemplified in the progressive and humane improvements of the most successful manufacturers; the circumstances of trade are so complicated and different, that no general rule can be devised without great unequal pressure; that restrictive regulations were no more applicable to the cotton, flax, or woollen manufacturers than to many others; therefore they appeared to him partial and unjust. The reasons for them were chiefly derived from speculative opinions in opposition to experience; and many of the reasons might be directed equally against manufactures altogether. The restrictive regulations must increase the enormous poor-rates, by lessening the quantity of industry from the same population and subsistence, as well as diminish the demand for its labour, by enhancing its price. They would give foreign countries in which there were no restrictions an advantage over our own, and at a crisis when we were still struggling for the existence of our manufactures under an enormous load of taxes; they would probably produce an emigration of workmen and a transfer of capital to foreign countries; by their operation an immense revenue is at stake; the safety of three manufactures, equal to more than sixty millions sterling per annum, may be hazarded, of which more than one-half, according to the official reports, is dependent upon foreign demand, and, of course, upon foreign competition."

Mr George Augustus Lee "had travelled on the continent and personally examined into the state of manufacture in France; at Rouen he had visited two cotton manu-

factories, each employing 1,000 people; the proprietor had been protected from conscription, encouraged, and decorated with the Legion of Honour by the first Napoleon. Mr Lee assured the committee that the progress of the cotton manufacture in France gave him great alarm." Mr Lee was evidently convinced that the only road open for the improvement of the health and morals of the population was through the increase of accumulated riches, and the extension of foreign trade. He stated facts, enunciated principles, and foretold results with that air of confidence which alone belongs to men who fancy that they know the whole truth.

The disagreement of the witnesses examined was distinct and irreconcilable. Men of the highest respectability gave evidence on the same subject, leading to opposite conclusions. The evidence was not, to many minds, conclusive for or against legislative interference. This perplexity was itself a result, evidence of an important change in the minds of legislators. One-tenth part of the medical testimony against over-work given in 1816, would, in 1802, have been considered irrefragable proof. The subject was still open for investigation and controversy, and the first Sir Robert Peel and his supporters could, at this time, only have anticipated that any renewed appeal to parliament for factory regulation would be met by an organised and energetic opposition.

CHAPTER V.

RENEWED EFFORTS OF THE SUPPORTERS OF FACTORY REGULATION.—
POWER, POSITION, AND ARGUMENTS OF OPPONENTS.—DEBATE IN
THE HOUSE OF COMMONS IN 1818.

WHEN a truth has once gained possession of the mind of an earnest man who measures the fulfilment of his duties by the sense he feels of his responsibilities, it will not be allowed to slumber in indolent and fruitless inactivity. Important truths take stronger root in the minds of sincere men than with the majority of mankind. Such men cannot be dismayed. Obstacles will arise, delays ensue, and sometimes doubts intervene to check the realisation of thoughts in practice; good thoughts, seriously entertained, will live on, and cannot possibly be neutralised by the existence of difficulties. A strong sense of duty is proof against obloquy and slander, and steadfast amidst the novelties and exigencies of current times. The frivolous and the weak are easily thwarted in their designs: in the understanding of the frivolous, life has but few serious duties; in the case of the weak, timidity renders them impotent:—"A double-minded man is unstable in all his ways."

The opponents of factory legislation were not slow to profit from the contradictory nature of the evidence given before the committee of the House of Commons in 1816. The combined cotton-spinners opposed to factory regulation were rich and well-organised, advantages which their

energy and business habits enabled them to turn to account. They secured a widely-extended circulation to such portions of evidence as were favourable to their opinions, they omitted the portions opposed thereto. They were not sparing in their insinuations against the supporters of the Ten Hours' Bill. Slander is a very powerful weapon, and, like the assassin's dagger, wounds most fatally when the hand that strikes is hidden from the eye of the victim. This treacherous and dangerous weapon was often and powerfully used by some among the opponents of factory regulation. The motives of the first Sir Robert Peel were misrepresented, the character of a truly good man—Mr Nathaniel Gould, traduced; others suffered in their degree.

Here we must pause: it has been the habit of the opponents of factory legislation, for want of better arguments, to represent its original supporters as men of little worth, of mediocre talent, as mere visionaries — speculative dreamers devoid of every quality calculated to give weight and force to their opinions. We have already spoken of the first Sir Robert Peel, and have given judgment on his talent and character as a parliamentary leader. We cannot, in justice to the memory of Nathaniel Gould, proceed without recording our testimony to his worth. Nathaniel Gould was a prosperous and universally respected Manchester merchant, faithful in the discharge of every duty; his time, his talents, and his wealth were used in the service of his fellow-creatures; his active benevolence called forth the admiration of his neighbours and the gratitude of the poor, his sympathies for their children led him to constant and active exertions in their schools, every measure calculated to improve their condition, religiously, mentally, and physically, found in him a willing supporter. In Manchester there was not a more respectable, there was not a more respected citizen than

Nathaniel Gould; he became the out-of doors leader in the great question which now engages our attention. With the self-sacrifice of a Christian indeed, he threw himself into the gap between the oppressor and the oppressed, his days and nights, his physical and mental energies, his great influence and wealth, were all willingly devoted to the cause he had resolved conscientiously to maintain. Until then his name had been without reproach, all admired his benevolence, his perseverance, his self-sacrifice, but now the anger of the oppressors of the factory children was kindled against him, their malice dared to impugn his motives; slander was their weapon, tales, malicious as they were false, were spread to his disparagement, one of the best men in Manchester was represented to have been one of the worst; even then, he was true to the cause he had espoused, and he defended it as a duty he owed to God and man.

Conscious of the frail tenure of human life, but firm and sincere in purpose, before the passing of Peel's Bill in 1819, Nathaniel Gould allotted in his will the sum of 5,000*l.* for the realisation of the good work in which he had engaged. He lived to see that work accomplished, and spent not less than twenty thousand pounds in the expenses attendant on the passing of what is called "Peel's Bill," but which, in its labour and expense, was eminently "Gould's Bill." During one of Nathaniel Gould's visits to London, he took lodgings in Dover street, Piccadilly, purposely to be "in the track of members of both Houses." One evening, when busily engaged writing notes to members of parliament, on the necessity of supporting the first Sir Robert Peel in the House of Commons, his bill for factory regulation then being before parliament, there entered a neatly-dressed, sedate, pleasant-looking young man:—"Well, Mr Gould, how are you getting on, do you see much ground for hope yet?"—"Aye, Robert," said Mr Gould, "it is hard work, but

we shall succeed, depend upon it.”—“Well, Mr Gould, I have told you that you have much to contend with in the House, and many that won’t offend you, you will find voting against the bill in the House.”—“No doubt, Robert, but our cause is good, and must succeed; a matter of time and a matter of money, but, Robert, it is a *righteous cause*, and must succeed.” After a few more words, this gentlemanly-looking young man walked up to Mr Gould; a slight interruption followed. Mr Gould said, “Aye, Robert, thou art a good fellow—good night,” and familiarly patted his youthful friend on the shoulder as he retired. Nathaniel Gould’s assistant, whom he loved and trusted, now a most reputable London merchant, said,—“Well, Sir, what was all that about?”—“We’ll see,” said Nathaniel Gould, stepping near to a candle, and opening his hand, which contained a fifty-pounds bank note; he then observed—“Robert is a good fellow, he little knows what I am spending in this business, but he means well, and I will not offend him.” That young man was the second Sir Robert Peel; his donation was a proof of his desire to serve the cause which his father and he had in parliament supported. While living (apart from personal exertions, which were incessant), Nathaniel Gould contributed munificently to the principal public charities in Manchester; in justice to the memory of this truly pious and christian man, we append a list of some of the sums set apart in his will for public purposes; it is not for the world’s benefit that the good which men have done should be forgotten in the grave.

Legacies for charitable purposes bequeathed by the late Nathaniel Gould, of Manchester.

At the meeting called to establish “the Town Wards and Infirmary,” since called, “The House of Recovery,” Mr Gould contributed 300*l.*; the subscription not equalling on the whole his expectation, he contributed anonymously an additional 200*l.*, making with the legacy named above 1,000*l.* It was his desire that “the Gospel should be preached to the poor;” as a means to this end he bought the galleries of St Stephen’s Church, Manchester, intending these to be free sittings. This purchase, notwithstanding, he was compelled to pay an assessment on the value. When the property came into the hands of the Reverend Joseph Gould, nephew of the late Nathaniel Gould, he too was charged the assessment; by legal advice, he let the front seats, and eventually conveyed the whole to the poor for ever,—thus realising the intention of his uncle, of whom it may be truly said:—“He loved his God, and served his kind.”

Much has been said and written about the power of the feudal barons over their dependants, in ages long past; the theme has been a favourite one with those who prefer the palliation of the crimes of their own age by a comparison with extreme cases in other ages. The power of punishment, reduced to practice, by barons in feudal times, was

unequal to the searching and direct despotism frequently manifested by the unscrupulous owners of some cotton manufactories over their infant labourers. True, the unscrupulous factory-owner could not with impunity hang a refractory servant by the neck until life was extinct, a power which the ancient barons possessed, but then the baron's means of knowing those among his vassals who dared to think differently from himself were few, in comparison with those at the command of the factory-owner; the serfs of the soil, spread over a wide domain, except in times of war, the toils and excitement of which they courted rather than feared, were seldom interfered with; it was in the very nature of feudalism to depend more upon attachment than terror, the love of the chief and the honour of the clan were more potent influences in securing servitude than the dread of personal punishment. A few hundreds of individuals, cooped up within the walls of a cotton manufactory, were well known to the owner, under the immediate inspection of himself, any one of whom was easily singled out for punishment. This was frequently done; an operative who dared to give evidence on the factory system, to tell others what he had himself endured, or known others endure, was a marked man, and his name once in the "black book," he and his were objects of relentless persecution. What persecution? The persecution of being refused to "earn his bread by the sweat of his face:"—think of it, for there is none greater.

The opponents of factory legislation were unceasing in their efforts to make popular the doctrine that it was not consonant with the duties of an "enlightened government," in any way to interfere with the relations of capitalists and labourers. In the estimation of these millowners, the beginning and the end of the duties of a government consisted in protecting their property, and allowing them to treat all those under their control as to themselves seemed

best. "Let all things alone," is the approved maxim of indolent statesmen and satisfied capitalists, but though supported by much plausible reasoning, did not meet with the approval of the factory operatives, or the more humane among their employers. It is deserving of remark, that the popular doctrine of "letting all things alone," has grown up in this country at the very period of her history when the old moorings of society have been sundered. In any country which, like England, had risen to influence through the slow growth and gradual evolutions of many ages, a country in which security of person and property had from habit and law been firmly established, so long as agriculture and manufacture remained nearly in their relative proportion, one to another, "letting all things alone" would, in all that related to industry, have been, if not a safe, at least not a suddenly dangerous course. A people wedded to the soil, attached to family, property, and country, required but little attention from statesmen; their industry, thrift, and patriotism, were the sources of national strength, and bonds of health, comfort, and order. To such a people, the modern maxim of "do nothing" would have had the negative merit of saving their interests from the blight of official incapacity, and its result—ill-judged intermeddling. When numerous sections of the population forsake the parishes of their forefathers, and all the associations which connect the cordings of society (binding men and women to home and duty), and are concentrated in indiscriminate masses, subject to conditions which they every day feel to be injurious to health and virtue, but which, by their own confession, they are unable to change, to preach to such a population, "Let all things alone," is to hand them over defenceless to the cruelties attendant on graduated death, to prepare for future generations an incalculable increase of misery and crime. The primary distinction

between a wisely adjusted system of national economy, and "letting all things alone," is, that in the former, all known, serious, and dangerous evils are restricted in their operation by law; in the latter, they are left to the full force of their unrestrained action, to become in time deeply seated organic diseases; in the one case social despotism is bridled, in the other, it may kill its victims by tens of thousands, none daring to make it afraid. Of all kinds of absolutism, no matter by what name known, the most destructive and relentless is the absolutism of Mammon over human sinews. Such was the conscientious conviction of the most active among the principal supporters of factory regulation, and although they, because of circumstances already named, were delayed in the labour in which they had engaged, they were far from being disheartened or doubtful of ultimate success. These untoward circumstances, united with the failing health of their parliamentary leader in the House of Commons, prevented for a season the re-introduction of the Factories' Regulation Bill as originally intended.

Early in 1818, the supporters of factory regulation were active in their operations, resolved that not any further delay should take place on their part. In the hope of disarming opposition, they, chiefly through the solicitation of the first Sir Robert Peel, had agreed in their bill to lengthen the restricted hours from ten to eleven per day. The opponents of the measure were equally active, and took the lead in parliament. On February the 18th, 1818, Lord Stanley presented a petition from the owners and occupiers of cotton mills in Manchester and vicinity. The petitioners condemned the evidence given before the committee of 1816, and prayed, "that if the House required further information upon the subject, they would be pleased to appoint a special commission of its own members for the purpose of examining upon the spot into the actual

condition of persons employed in the various cotton and other manufactories." The question was now fairly before the House of Commons; on February the 19th, the first Sir Robert Peel introduced to the notice of the House his promised motion; "the importance of which increased more and more on every consideration of it." "In Manchester alone, about 20,000 persons were employed in the cotton manufactories, and in the whole of England about three times that number." "It was notorious that children of a very tender age were dragged from their beds some hours before daylight, and confined in the factories not less than fifteen hours; and it was also notoriously the opinion of the faculty that no children of eight or nine years of age could bear that degree of hardship with impunity to their health and constitution." "Those who were employers of the children, seeing them from day to day, were not so sensible of the injury that they sustained from this practice as strangers who were strongly impressed by it. In fact, they were prevented from growing to their full size. In consequence, Manchester, which used to furnish numerous recruits for the army, was now wholly unproductive in that respect." The honourable baronet concluded, by moving "that leave be given to bring in a bill to amend and extend an Act made in the forty-second year of his present Majesty, for the preservation of the health and morals of apprentices and others employed in cotton and other mills, and cotton and other factories." A debate ensued, Mr Peel (the second Sir Robert) spoke with much point and force in favour of the motion. The principal opponent was Mr Finlay; he said, "that excepting in one instance, in the county of Lancaster, there was no proof of the existence of any evils which could justify legislative interference."

The bill was brought in and read a first time.

The second reading of the bill took place on February

23rd, 1818; Sir Robert Peel said, "In the bill brought in in 1815, the age at which the children might be employed was fixed at ten. He now proposed the age of nine years, and that the powers of the Act should terminate when the child reached the age of sixteen, and could be considered a free agent. He, therefore, now recommended that children employed in cotton factories should from nine to sixteen be under the protection of parliament, and before nine that they should not be admitted; that they should be employed in working eleven hours, which with one hour and a half for meals made in the whole twelve hours and a half. It was his intention, if possible, to prevent the recurrence of such a misfortune as that which had lately taken place—he alluded to the fourteen poor children who were lately burnt in the night in a cotton factory. [At Colne bridge, near Huddersfield.] He knew that the iniquitous practice of working children at a time when their masters were in bed, too often took place. He was ashamed to own that he had himself been concerned where that proceeding had been suffered; but he hoped the house would interfere and prevent it for the future. It was his wish to have no night work at all in the factories." The honourable baronet concluded by moving "that the bill be read a second time." The debate which followed, though conducted with earnestness on both sides, elicited not any new facts or views on the subject. The principal speakers for the bill were the first Sir Robert Peel and Mr Peel (the second Sir Robert); against the bill, Mr Philips and Mr Finlay. The bill was read a second time and committed, the report received and ordered to be taken into consideration on the 6th of April. On April the 10th, the first Sir Robert Peel presented a petition from all the cotton-spinning factories in Stockport, in favour of the Cotton Factories' Bill. To this petition Sir Robert attached the greatest importance. Sir James Graham, on the contrary, assured

the house "that these petitioners were no other than a set of idle, discontented, discarded, and good-for-nothing workmen, who conceived that they did too much when in employment for the wages which they received. He knew them to be of the description which he had stated, and he had no doubt, if the bill before the house were carried in the present session, these men would endeavour next year to have a bill carried to limit their hours of employment to a much smaller number than those which were fixed by the bill."

The first Sir Robert Peel defended the character of the petitioners against the charges of Sir James Graham. The petition was ordered to lie on the table.

Between the second reading and the time appointed for the third reading, petitions for and against the bill were presented from various towns and villages in the factory districts of the United Kingdom.

The discussion on the Factories' Regulation Bill in the House of Commons on April 27th, 1818, was, in all important respects, a repetition of leading portions of the evidence given before the Committee of the House of Commons in 1816. The first Sir Robert Peel stated at length his motives for introducing the bill, and explained its provisions. The principal speakers in opposition were Lord Stanley, Mr Philips, and Mr Finlay. The ablest speech in support of the bill was that of Mr Peel (the second Sir Robert). He denied that either parents or children were free agents. Referring to the nature of the evidence against the bill, he said, — "Indeed, if all that the honourable members had said of the healthiness of cotton mills were true, application ought to be made to the Legislature for the erection of cotton mills, for the purpose of further and more effectually providing for the health of his Majesty's liege subjects. The instances produced from the evidence were certainly strong enough to support the most unqualified of the asser-

tions which had been made as to the healthiness of cotton mills. One of the instances was that of a mill at Glasgow, in which he believed an honourable gentleman opposite was concerned. It was given in evidence that in this mill 873 children were employed in 1811, 871 in 1812, and 891 in 1813. Among the 873 there were only three deaths; among the 871 two deaths; among the 891 two deaths; being in the proportion of one death in 445 persons. So very extraordinary a small proportion had naturally excited the astonishment of the Committee [1816], and therefore, as was to be expected, they questioned medical gentlemen as to the proportion of deaths in different parts of the kingdom. When this statement was shown to Sir Gilbert Blane, he expressed his surprise, and observed, if the fact was not asserted by respectable persons he should not believe it; and being asked 'why he distrusted it?' he said that 'the average number of deaths in England and Wales was 1 in 50 (in 1801 there had been 1 in 44). There were favoured spots, certainly — Cardigan, in which the deaths were as 1 in 74; Monmouth, in which there was 1 in 68; Cornwall, 1 in 62; and Gloucester, 1 in 61;' yet in the cotton factories they were stated to be as one in 445! In one of Warton's beautiful poems which begun with these lines—

' Within what mountain's craggy cell
Delights the Goddess, Health, to dwell.'

After asking where the abode of this coy goddess was to be found, whether on 'the tufted rocks,' and 'fringed declivities' of Matlock, near the springs of Bath or Buxton, among woods and streams, or on the sea-shore, it would certainly have been an extraordinary solution of the perplexity of the poet, if, when he inquired—

' In what dim and dark retreat
The coy nymph fixed her fav'rite seat?'—

it had been answered, that it was in the cotton mills of

Messrs Finlay and Co., at Glasgow ; yet such was the evidence respecting this mill, that its salubrity appeared six times as great as that of the most healthy part of the kingdom. This was the sort of evidence which had been brought to disprove the evidence of disinterested persons, of medical men, and even of persons who had an interest opposed to the measure before the house." The house divided—Ayes, 91; noes, 26.

The opponents of factory laws have ever been ready with their demand for renewed investigation, and each fresh inquiry has closed by strengthening the cause of factory legislation. "The reason why" is obvious ; the evils of the factory system were real, deeply rooted, and widely spread ; as light was reflected on the system, its hideousness became the more apparent. Yet there were method and policy in the cry for "more light." Those from whose lips the cry issued did not desire "more light," but more opportunities for delay ; they cherished the hope that they would weary their opponents and force them to capitulate or compromise. Nor were these hopes always without foundation. The policy was, to a limited extent, successful ; the first Sir Robert Peel did make concessions ; he departed from the original proposition of ten hours per day as the working hours in factories, and he reduced the age of admission from ten to nine years, but he did not thereby conciliate his opponents. On the contrary, he increased their determination and increased their hopes of success. After so memorable an illustration of the undesirable results of concession and compromise, only ignorance and weakness could at any future time be urged in excuse for the repetition of so dangerous a lesson. The experience thus gained was not lost on the active leaders of the factory regulation movement, who, at a subsequent period, nailed their banner aloft, and on that banner inscribed their motto, "The Ten Hours' Bill, and no surrender."

CHAPTER VI.

PROCEEDINGS IN THE HOUSE OF LORDS.—APPOINTMENT OF A COMMITTEE.—NATURE OF THE EVIDENCE. — ARGUMENTS FOR AND AGAINST STATED.

WHENEVER one portion of society, either from an ignorance of the conditions necessary for healthful, physical, mental, and moral action, or from self-interest, have resolved to perpetuate an existing order of things injurious to the interest of their fellow-men, the supporters of the predominant conditions find many plausible reasons of defence; among these is frequently an appeal to some popular sentiment. One of the chief sources of delusion in all ages has been the use of the words freedom and liberty: these words are responded to by a deeply seated hatred to restraint implanted in the heart of man, and their studied and crafty application has oftentimes done more to continue positive slavery, and to prevent the formation of requisite conditions for rational freedom, than the united action of all other agencies. It was, therefore, not surprising that the opponents of factory regulation should have claimed for themselves the proud, and, when justly used, honourable distinction of being “the advocates of liberty and freedom,” arrayed in opposition to men whom they by inference, and sometimes openly, condemned as the enemies of both. It had probably occurred to but few among the influential opponents of all legislative interference between capitalists and labourers, that the limits of

justifiable interference depended at all times upon the reasonable control manifested by man over his desires and in his conduct towards his fellow-man, and that he cannot be called free whose wants oblige him unwillingly to submit to conditions of existence positively injurious to his own health and morals, nay, even, if man, from ignorance and long habits of subjection, should without murmur or complaint toil for his daily bread to the certain injury of body and mind, and against the interests of those dependant on him, such a one is not a free man, but a being sunk even beneath the meanest conditions of ordinary serfdom, and any interference by law to check the operation of the power that forces man into such degrading and undesirable submission, whether willing or unwilling, is an interference on the side of true freedom, and a preliminary step towards the establishment of rational liberty. The force of these truths, with their practical operations in his father's mills, no doubt, led the second Sir Robert Peel to deny "that either parents or children were free agents." It has been one of the misfortunes of the present century to hear too much about capitalists and labourers and too little about man and his duties, a misfortune that repeated discussions on factory regulation were destined in some degree to modify. It sounds exceedingly well to say to a working man—"You are sixteen years of age, you are an adult, you are a free agent, at perfect liberty to work on the conditions offered, or, to refuse those conditions, as you please;" but if the working man has not any other property than his labour, and the capitalist offering these conditions has means of support greater than the working man, the choice open to the latter, no matter of what age, in ninety-nine cases out of a hundred is between submission and starvation. Shakespeare most expressively puts into the mouth of Shylock the words—

"You take my life
When you do take the means whereby I live."

The working man's "means" of living are the wages of his labour; the moment he ceases to labour his "means" are at an end; a circumstance which to him makes almost constant daily employment an indispensable condition of honest and honourable existence.

These conditions being so with the adult factory operative, he felt that all appeals made to him by the owners of factories against shortening the hours of the labour of his children, when employed in factory labour, though conveyed to him in honeyed words about "freedom and liberty," were unfitted to his wants, and, with few exceptions, fell barren to the ground. All that gold and energy could do to enlist the working men of the factory districts on the side of the opponents of regulation was done between the sitting of the first Sir Robert Peel's committee, in 1816, and the committee of the Lords, presided over by Lord Kenyon, in 1819. The agencies, however, which were comparatively fruitless when applied to working men, were more successful among a few whose opinions oscillated on the pendulum of personal interest, and on others whose judgments were fashioned by abstract theories of political economy, apart from the consideration of the actual facts of life.

The Cotton Factories' Bill was formally introduced to the House of Lords on May 7th, 1818, by Lord Kenyon, and read a second time on the 8th. On the first and second readings the Earl of Liverpool expressed strong and decided opinions in favour of the bill, declaring that "it was part of the common law of the land that children should not be over-worked, and that if all the medical staff of Manchester were brought to the bar of the house to prove that children worked more than fifteen hours a day without being thereby injured, he would not believe them." Lord Kenyon was equally decided. The Earl of Lauderdale and the Lord Chancellor were strenuously opposed to the bill, complained of the want of evidence, and condemned the evidence given

before the committee of the House of Commons in 1816. The debate on the second reading closed with an understanding that counsel and evidence should be heard against the bill before a committee of the whole House. On May the 19th the subject was again brought before the House of Lords; an animated debate followed, in which the Bishop of Chester [George Henry Law, D.D.] declared that "parliament was the natural guardian of the unprotected." He "felt it due to the situation he held, to his acquaintance with the situation of the children employed in factories throughout his diocese, to state these sentiments to their lordships, and to call upon them to assert the cause of defenceless and suffering youth, more especially since, by doing so, their lordships would support the interests of society at large." In the committee Messrs Warren, Scarlett, Harrison, and Evans were counsel for the petitioners against the bill. It was at the close of the debate, which followed on the speech of Mr Warren, agreed that counsel should be further heard before a committee to-morrow. On the 5th of June it was, by the consent of the supporters and opponents of the bill, agreed to postpone the further consideration of the question for the session. Lord Kenyon pledged himself to bring the subject before their lordships on an early day of the ensuing session. The subject was consequently brought under the consideration of the House of Lords on February 4th and 8th, 1819. On February 25th Lord Kenyon moved "That a committee be appointed to inquire into the state and condition of the children employed in cotton factories, and to report thereon to the House," which motion was, after a debate, carried by a majority. The Lord Chancellor (Lord Eldon), in the course of the debate in the Lords, stated his opinion "that the offence of over-working children was one indictable at common law." He "saw no reason why the master cotton-spinners, manufacturers, and master chimney-sweepers, should have dif-

ferent principles applied to them than were applied to other trades." "A general law ought to be passed, if necessary, for the regulation of manufacturers of all kinds ; but it might happen that a particular law, applicable only to children in one trade, might expose them to greater evils than those from which it was intended to protect them." These observations prove that the Earl of Eldon was not opposed in principle to regulation, but to its partial application.

All the leading features of the evidence given before the committee of the Commons in 1816, were repeated before the committee of the Lords in 1819 ; these, however, were brought out in bolder relief, of which we will supply a few examples, on the examination by counsel before the Lords in 1818. Mr Thomas Wilson, a surgeon and apothecary, of Bingley, in Yorkshire, on being asked the question, "Is it not, in your judgment as a medical man, necessary that young persons should have a little recreation or amusement during the day ? is it not contributory to their health ?" answered, "I do not see it is necessary." The same witness "was of opinion that the employment in cotton factories was as healthful as employment in agriculture ; an opinion fortified by twelve and a half years experience as a surgeon and apothecary."

"Mr Edward Holmes, M.D., of Manchester, had been in practice in Manchester twenty-four years, and had during that period been connected with the Manchester Infirmary, Dispensary and Lunatic Asylum, and from 1796 with the House of Recovery," was examined by the committee.—"As you doubted," said the committee to Mr Holmes, "whether a child could work for twenty-three hours without suffering, would you extend your doubt to twenty-four hours ?"—answered, "that was put as an extreme case, my answer only went to this effect, that it was not in my power to assign any limit."—"Not even twenty-four hours ?"—"I should think that extremely improbable : I have no doubt

at all. All I wished to say was, I could not, if your lordships were to assign to me any portion below twenty-four, say whether it was above or under the line, for so extraordinary have the facts appeared that have come out on the investigation of these factories, that I begin to doubt many of the common-place opinions that have been entertained upon that subject."

The reader may be astonished at such extraordinary medical evidence; it is, however, a specimen of a large stock, and the only key we can supply to understanding why some medical men discovered that "recreation" was not necessary to the health of young persons, and their possible ability to work incessantly any number of hours below twenty-four, even "twenty-three," without physical injury, is afforded in the course of the evidence itself:—Mr Edward Carbutt informed the committee of the Lords that "a committee of Master Cotton-spinners in Manchester, opposed to factory legislation, employed himself and other members of the medical profession to examine the health of children employed in factories." We adduce the facts as stated in evidence:—*The Committee*: "You were applied to professionally?" *Mr Carbutt*: "Yes, I was." *Committee*: "And paid professionally as any other gentleman would be." *Mr Carbutt*: "At the time I examined the Ancoats-twist mill, I had no expectation of payment, I have not yet received any; but it is *probable I shall*, when examining the others; *I perceived there was an intention of paying me professionally.*"

Before the committee of 1819, evidence of an entirely opposite nature, and corroborative of the opinions of Ashley Cooper, Esq., Sir Gilbert Blane, Christopher Pemberton, Esq., and Sir George Leman Tuthill, was given by Mr William Simmons, M.D., Mr Michael Ward, M.D., Mr Wistanely, M.D., gentlemen whose experience in factory districts, and high professional reputation gave their evidence increased importance.

“Mr George Paxton, a Manchester factory operative employed in the Albion Mills, examined :—

“What are your hours of working?—From six to half-past nine in the evening, and half an hour for dinner.

“Are all the hands allowed that half hour to quit the mill?—They cannot do their duty; they can scarcely clean what they have to clean in the time, and oil it.

“How often are they kept to clean and oil?—Every day.

“The children?—Yes.

“Are their present hours of work longer than they used to be?—Yes.

“Since when?—Since this day fortnight: we had a report that the Time Bill was thrown out of the House, and on the Tuesday following the hours were lengthened from six to half-past nine, and half an hour for dinner: and before that it was from six to half-past seven, and an hour for dinner.

“Do the work people complain of the hours being lengthened?—Yes: we opposed it, and gave over that evening: when the master came the next morning he went to the manager, and I believe he swore, at least he told me so, that those men who did not choose to work the hours might go about their business. We told him the children could not stand the hours.

“What is the name of the manager?—James Stanfield.

“Has he been long manager?—Yes, ever since I have been there.

“Were you afterwards required to work those lengthened hours?—Yes, and we have done it ever since.

“Is the meat liable to be covered with dust from the cotton in the mill?—Yes, it cannot avoid it.

“Do children often leave their meat?—Often: my children have left it: when they get home at night

they cannot eat: I got a strap to awaken my own children, my feelings got the better of my passion, and I did not beat them: and what was the more impeaching to my feelings was, they could not eat their supper when they got home: I reflected upon it, and in vexation of spirit I could not eat my own supper: we all went to bed crying."

"Mr John Farebrother, thirty-one years of age, a working spinner from Bolton, in Lancashire, examined:

"Were the children as ill-used while you were overlooker, as when you worked as a boy?—We were worse used; the mill was worked by steam, and my master had another to join him, and the hours were lengthened; they were more ill-used than they were before.

"Were they ill-used besides the number of hours being lengthened?—They have been very much beaten for not being there in time of a morning: they began at five o'clock.

"Who used to beat them?—When I was an overlooker I used to beat them myself, and sometimes the master.

"Was it your duty to beat them, if you could not get them to do their work?—Yes.

"Did your master tell you to do so?—Yes, and he used bad language to me for not doing it.

"Were you forced to see a certain quantity of work produced?—Yes, I was.

"Which master was this?—Mr Luke Taylor: I have seen him, with a horsewhip under his coat, waiting at the top of the place, and when the children have come up, he has lashed them all the way into the mill if they were too late; and the children had half a mile to come, and be at the mill at five o'clock."

"Mr Jeremiah Turner, of Portwood, in Cheshire, stated that "accidents of a serious and fatal nature were of frequent occurrence."

James Watkins, Esq., a magistrate for the district of Bolton-le-Moors, Lancaster, "had devoted much attention to the condition of factories," and gave most important evidence, a portion of which was as follows:—"It is an unquestionable truth that children employed in cotton factories that have fallen under my observation are generally puny and squalid, especially those who work at mills where steam-engines are used: but in establishments where the machinery is worked by water-wheels, the climate of the rooms is more wholesome, and the appearance of the children better; still, a great inconvenience presents itself where power is drawn from a source which occasionally fails. It happens that in dry, as well as in rainy seasons, the power is suspended by a want, as by an excess, of rain; and to bring up the time so lost, children are unmercifully kept at their work sixteen hours in twenty-four. The pernicious custom, too, which generally prevails, of these little workers being constrained to eat their breakfasts in the mill, and no relaxation out of it, except half an hour to three-quarters of an hour (seldom longer) will truly account for the peculiar sickness which seems to fasten upon the whole race. It was not known scarcely by any one proprietor or occupier of factories, where apprentices are not employed, that they were subject to any legislative restrictions, and this explains why the Act of Parliament was not provided in any one of them. In several instances it was found very difficult to arrive at genuine information as to the general treatment of children, and the ordinary discipline in mills; and it is to be regretted that deception in some cases was practised by wealthy proprietors of large establishments. It might be deemed invidious to mention names. Children working in woollen mills are universally healthier and more robust, though those buildings are filthy; it is, however, represented as an impossibility to keep them clean, from the quantity of animal oil that escapes from the wool

in the various processes it undergoes. Hours of work are shorter than in cotton factories, and the climate of these mills is comparatively salubrious. The smaller cotton establishments (and they are numerous) which do not contain 'three or more apprentices, or twenty or more other persons,' but which contain 'an average of fifteen persons,' were also visited by me, and, admitting of no exception, they were thought to be *worst of all*, in the fullest meaning of the words; similar to these are some large mills, whose respective stories are let off to different occupiers; it is thence hoped that any future enactment will extend to *all factories whatever*. An invincible jealousy regarding the hours of work pervades the whole race of cotton spinners (Messrs Calrow's and Messrs Grant's are certainly exceptions), each competing with the other as to the greatest quantity of yarn to be turned off, pending the protracted hours of labour, and yet, collectively and individually, a strong wish is expressed for such legislative restrictions as will apportion the hours of confinement, labour, and refreshment, to the age and strength of the juvenile class of our fellow-creatures. Mistaken, too, on the score of individual interest is this excessive confinement; because, by correct calculations, it is ascertained, that where establishments are conducted upon the humane principle that they ought to be, that where the health and comfort are primary duties, as much yarn is spun, and *better* spun, in twelve hours than in fifteen; in the one instance human life is happily prolonged; in the other, misery, disease, and sorrow are identified with a short existence."

A full review of the evidence, as given before the committee presided over by Lord Kenyon, and also the "out-of-doors" proceedings of the opponents and supporters of the bill, will show that the separate parties entertained and advocated opinions decidedly opposed, each to the other. The opponents of all factory legislation contended that

the necessity for regulation by law had not been made out; that the proposed factory bill struck at the very root of family order by interfering with parental authority; that it indirectly opposed the free labour of adults, and was opposed to individual liberty; that the adoption of the bill as law would ruin the manufactures to which its operation was to be applied; that a restriction on the hours of labour would, in effect, be equivalent to a bounty paid to rival manufacturers on the continent; that if parliament passed a bill to restrict the hours of labour in factories, parliament could not refuse to pass bills to regulate the hours of labour in all other trades; that under the operation of such a law the employment of children would decrease, that adults would be preferred, that this result would be injurious to the interests of all concerned; that the existing system of labour promoted industry and good order among the work-people, both children and adults; that, on the other hand, shortening the hours of labour, as proposed in the factory-workers' bill, would promote indolence and profligacy in affording time to go to public-houses at night, and to be otherwise disorderly; that very desirable and necessary improvement would result from the free action of the mill-owners themselves; that they were the best judges of their own interests, and that whatever was to them most advantageous, must necessarily be most advantageous to all employed by them; that all interference by government with capitalists, in the use of their capital, was wrong in principle, and must ever prove injurious in practice.

The supporters of factory legislation maintained that the necessity for interference by law had been fully made out; that one effect of the proposed bill would be to strengthen family order; that parents who sacrificed the health of their offspring to their own sensuality were not fit guardians of their own children; that such cases of parental cruelty were comparatively few; that the vast

majority of the parents of children employed in factories desired a reduction of the hours of labour; in the absence of the authority of law, parents were unable to enforce their own desires; that a reduction of the hours of labour in factories would contribute towards the improvement of the health and morals of all persons employed in factory labour; that the enactment of the proposed bill would not prove ruinous, or even injurious, to the success of British manufacture; that man, not money, was the primary consideration; that the limit of interference by law with labour and capital must at all times depend upon the ability of men to control their own habits and desires; that the very existence of the evils complained of was evidence that "the factory system" did not contain within itself the means of correcting those evils; that every seeming profit to individuals or the nation was more than counterbalanced by its consequent loss; that as the laws of England were avowedly founded on the laws of nature and the laws of God, not any practices should be allowed in the social condition of England opposed to Christianity and the Constitution; that "the factory system," as then conducted, with few exceptions, outraged nature and violated Christianity.

The parliamentary struggle was drawing to a close. It is due to the contending parties to say, that each was energetic in the advocacy of its own views, and that the subject caused the liveliest interest throughout the country. On June the 14th, 1819, Lord Kenyon introduced to the House of Lords the bill, as it had been finally agreed to in the House of Commons. He "rested his support of the bill upon the facts proved in evidence, contended that this was not in any manner a speculative question, but a question of practical humanity, arising out of the actual sufferings of the children employed in the cotton factories, for which no relief was to be found in any of the provisions of the common

law, and therefore it became necessary to resort to a special legislative measure." The opposition in the Lords, though influential, was ineffective ; the bill passed through the various stages, and became law. This result was satisfactory to the country, and was accepted throughout as "a triumph of the Christian feeling of the Legislature over the selfishness of a limited section of factory owners." The substance of the Act was as follows:—A.D. 1819. 59 George III: An Act to make further provisions for the regulation of cotton mills and factories, and for the better preservation of the health of young persons employed therein. It enacted that, from and after the first day of January 1820, no child shall be employed in cotton-spinning under nine years of age. No person under sixteen years of age to be employed more than twelve hours per day. To every such person in the course of the day not less than half an hour shall be allowed to breakfast and not less than one full hour for dinner ; such hour for dinner to be between the hours of eleven o'clock in the forenoon and two o'clock in the afternoon. Time lost by accidental intermission to be made up after the rate of an additional hour per day. Ceilings and interior walls to be washed with quicklime and water twice a year. The Act, or a faithful abstract, to be hung up in a conspicuous part of the factory. Penalties for violation of the Act to be not less than 10*l.*, nor more than 20*l.* for each offence. "That this Act shall be deemed and taken to be a public Act, and shall be judicially taken notice of as such by all judges, justices, and others, without specially pleading the same."

The Factories' Regulation Act, when obeyed, was most salutary and beneficial, disproving in practice every argument which had been urged in opposition. The bill, as originally introduced, was intended to be applied to *all mills* ; the operation of the Act was limited to *cotton manufactories*, a circumstance to be regretted ; the result also of an inju-

ditions concession to opponents. Though the Act was in practice beneficial to the operatives engaged in factory labour, yet, the spirit and letter of the law were frequently evaded. The law was by some influential owners of cotton factories viewed as a standing grievance and "a stain on their humanity." The weakness of such an objection is self-evident. Laws are "the application of man's wisdom to his wants," and have their origin not in his perfection, but imperfection; obedience to a necessary law is the primary requisite of good citizenship. "Knowing this, that the law is not made for a righteous man, but for the lawless and disobedient." Man's independent free will is a very good topic for clap-trap declamation, but it is, in society, practically impossible. The Factories' Regulation Act, though in practice satisfactory, met with the opposition and condemnation of that tribe of self-sufficient theorists to whose abstract dogmas it was in principle opposed. The opponents of factory legislation, whose minds were wedded to a theory opposed to all interference by law, continued their opposition unabated and uninfluenced by experience, and pointed out the violations of the law as proofs of its failure. The Factories' Regulation Act remained on the statute-book in defiance of such opposition; although very inadequate to the accomplishment of all it was designed to realise in practice, it was decidedly an important step in what future years proved to be the right direction.

The two fundamental propositions on which opposition to parliamentary interference was based were the following:—"Whatever is most profitable for the individual is most profitable for all those with whom he is connected"—a rule the universal application of which was manifestly absurd. "Whatever is advantageous to an individual in practice, is advantageous to a nation considered as an individual state in the society of nations." It appears never to

have occurred to the minds of modern writers on political economy that the wealth of an individual and the wealth of a nation are, in some important respects, different in their sources and effects; the wealth of a nation is intrinsic and internal, that of an individual extrinsic and external; the wealth of an individual does not spring, alone, from within himself, it is purchased and owned as property existing apart from himself, and may be wholly lost so as never to be recovered. The wealth of a nation is not necessarily in all respects of this character, it is not purchased by an operation of exchanges, but, in its origin, flows from the earth and the labour of the people; it is perennial, and if from any cause its operations are suspended, there is a fundamental law in nature which, unless the community itself be destroyed, insures the renewal of those operations, and, as an inevitable result, the return of national wealth. There is no such law invariably applicable to individual wealth. Assuredly the application of principles profitable for individuals may be advantageously applied to nations, but not necessarily so; there cannot be proved to exist any invariable law of this kind: as Locke has very judiciously observed, "the merchant may grow rich by that which makes the nation poor," and on the contrary, a nation may be rich while its merchants, individually considered, are not wealthy. The *doctrinaires* of the modern schools of political economists have been useful in directing the attention of mankind to a more systematic study of the origin of national wealth than was formerly practised, but they have been, like most "schools," too fond of generalities, and have overlooked many important particulars necessary to be remembered by statesmen, and the neglect of which has led to undesirable results.

CHAPTER VII.

ANTI-SLAVERY FEELING IN YORKSHIRE.—RICHARD OASTLER'S PRINCIPLES DEFINED—HIS LETTER ON "YORKSHIRE SLAVERY."—DISCUSSION IN THE PRESS.—MEETING OF BRADFORD MILLOWNERS, FAVOURABLE TO FACTORY REGULATION.—OPPOSITION MEETING AT HALIFAX.

It is a weakness of human nature, not admitting of a valid defence, that at times the majority of men are prone to forget their immediate social duties, those duties which concern most closely their own neighbours, to content themselves with a retrospective patriotism, related to past ages, or a geographical humanity, remote in its main results from their own interests, and not requiring any immediate change in their own practices. This weakness is confined to no age or country, its theory and practice correspond, both are eminently latitudinarian. It is, therefore, not remarkable, that in the years 1829 and 1830, this delusive failing should have been prominently manifested in the West Riding of the County of York. When England was moved, from centre to circumference, with appeals on behalf of the liberation of West Indian slaves, when the West Riding of the County of York was aroused to action by the eloquence of Henry Brougham, when, without exception, in Yorkshire, church, chapel, and newspaper, were organs of appeal for "liberty and right," when charity

children were singing in the streets the winning words of the Christian poet, Cowper:—

“ Still in thought as free as ever,
 Where are England's rights, I ask,
 Me from my delight to sever,
 Me to torture, me to task ?
 Fleecy locks and black complexion,
 Cannot forfeit nature's claim,
 Skins may differ, but affection
 Dwells in black and white the same.
 * * * *

Slaves of gold, whose sordid feelings
 Tarnish all your boasted powers,
 Prove that you have human feelings,
 Ere you proudly question ours !”

When sentiments akin to these words, strengthened by the oft-repeated cry of “Britons never shall be slaves,” were ringing in the ears of every one, and the highly nervous had their nightly sleep disturbed by hideous visions of kidnapping, murder, the crack of the lash, the clanking of chains, the writhings and groans of victims,—some among the most prominent of these sympathizers were rapidly growing rich on the profits of the labour of the little children, worked excessive and unnatural hours in the woollen and worsted factories of the West Riding, that same West Riding, whose voice, like “the sound of many waters,” cried aloud “*Slaves, be free;*” but in the multitude of whose voices not one had been raised for the helpless factory child, who was “tortured” and “tasked” with impunity at the thresholds of the doors of women and men, filled with what they themselves declared to be “a sublime enthusiasm” for the wrongs of injured negroes. Though this neglect of home duties, and habit of building up a reputation, and satisfying conscience by a distant philanthropy, is common to a proverb, there have been some notable and noble exceptions. Fortunately there have existed, in all ages, fearless

and bold men, who have observed the evils of their own times, who have dared to denounce wrong and error, to bring the professions and practices of their own neighbours into striking contrast; these men have been the salt of the earth, without whose savour the world would have become a barren waste. The actions of such men are not the results of convenience; a faithful conscience is their constant monitor, the impulse of their deeds has its origin in their keen sense of duty, there is a wholeness and simplicity in their moral nature, which impart to all their acts consistency and force; when checked by opposition, they rise with their necessities, feel themselves strengthened by the consciousness of their own rectitude; they, to a considerable extent, direct and control circumstances, leave the print of their footmarks on the habits of their fellow men, and, when successful, register their existence in the laws of their country. Among this class of the world's benefactors must be ranked Richard Oastler.

The prominent part which Mr Oastler has taken in the internal politics of this country, and more especially in the factory question, renders it necessary, at this time, to state the leading principles which moved and guided him in action:—This course will enable the reader to comprehend his proceedings. The foundation of Mr Oastler's social and political system is Christianity. He maintains that as Christianity is the avowed theory of the British Constitution, Christianity ought also to be the rule for the practice of British society; that the acts of avowedly Christian men are to be measured by their professed duty to and reverence for GOD, and their obligation to obey his Laws: that professions and forms, unsupported by corresponding acts, are evidences of hypocrisy deserving direct condemnation; that the poor and the oppressed have special claims on the consideration of Christian men and Christian governments; that cruelty, oppression, and tyranny,

by whatever names veiled, are unchristian, and in an avowedly Christian state, unconstitutional; that reason and all the fruits of genius should be subjected to the Laws of GOD; that the great error committed by modern British statesmen has been their adoption of the theories of men, in preference to the Christian groundwork of the ancient common law of England; that the important problem for British statesmen to solve was, How to reconcile the principles of the ancient constitution of the country to the changed wants and phases of society; that as the Christian faith is derived from the living God, and is itself His own revelation, every doctrine issuing from this source must in practice be for the positive advantage of men, temporal as well as spiritual; that Christianity is the only vital principle of all permanent good to men and nations; that it is the incumbent duty of every sincere Christian to sacrifice his own physical comfort, personal riches, and if needful, his own existence, in the cause of religious duty, social order, and justice. Mr Oastler, consistently with these convictions, has taken for his motto—"The Altar, the Throne, and the Cottage," and through good and evil report has maintained the reasonableness of, and the advantages to be derived from, a social system, in which the temporal and moral condition of society is made subservient, so far as may be possible, to the Law of GOD. These fundamental propositions were not preserved in the mind of Mr Oastler,—for purposes of occasional show,—to be paraded by way of holiday amusement; in his understanding and practice they constituted the every-day rule of practical utility; thus having taken his stand on the Bible as the acknowledged standard of truth in the Church and the State; to the people of England, he spoke in the words of Holy Writ:—"If ye will fear the Lord, and serve Him, and obey His voice, and not rebel against the commandment of the Lord, then shall both ye, and also

the King that reigneth over you, continue following the Lord your God. But if ye will not obey the voice of the Lord, but rebel against the commandment of the Lord, then shall the hand of the Lord be against you, as it was against your fathers." "Counsel is Mine and sound wisdom. I am understanding; I have strength. By Me kings reign, and princes decree justice. By Me princes rule and nobles, even all the judges of the earth."

Mr Oastler entertains peculiar views on the question of machinery. He maintains "that the true friend of science and of inventions is he—and he only—who would limit their exercise to the improvement and benefit of the condition of the thinking, consuming, sentient being, created in the image of God—man. Hitherto we have been drunk with the worship of our own inventions; we have laid ourselves down and let them ride over us. It is high time that we raised ourselves from the dust—turned ourselves round, not in revenge, but in the thoughtfulness of manhood, resolved that henceforward the creatures of our own imagination should be regulated by the law of God; that they should 'work ill' to no man, curbed by the law of the land, rendering compensation for the labour withdrawn." He maintains, that not any invention should be introduced and applied, without a compensation having been awarded to those workmen the value of whose labour would in consequence be reduced; and he asks, in one of his letters addressed to *the working men*, from which the extracts quoted are taken, "Ought any improvement to be adopted in a rational society which cannot provide for the wants of those whose labour it supersedes? Is it indeed a law of necessity that hundreds of thousands of human beings should be subjected, year after year, age after age, to penury and destitution, because one of their fellow-men has been more cunning than themselves—that they, their wives, and their children, should be robbed of every domestic and social comfort, and be

doomed by 'science,' from childhood to old age, to agonise in 'hopeless competition' against a power invented by man and wielded by wealth." On the "evils" which have followed from the unregulated introduction and use of machinery he has often expressed decided opinions.

Mr Oastler's political opponents have always admitted him to be a man of eminent ability and undoubted benevolence. Among his personal friends and political opponents was the late Mr Edward Baines, of Leeds. In 1831, at a public meeting in Leeds, at a time when political controversy was keen, and Mr Oastler and Mr Baines in opposition, each to the other, the latter frankly acknowledged Mr Oastler's claims to attention. Mr Baines observed "that whatever might have been said about Mr Oastler's brimstone speeches, he (Mr Baines) must say that there had been no brimstone that night. A speech which was in its nature so impressive, and uttered with such a seeming intention to produce conviction, rather by the force of argument than declamation, he thought he had seldom heard; and he was glad to be able to express to Mr Oastler his very warm satisfaction at the tone and manner he had adopted. * * * Mr Oastler had said, very truly, that they were old acquaintances; he believed their acquaintance was of thirty years' standing, and therefore they ought not to discuss any subject in bad feeling. He (Mr Baines) had the honour of knowing Mr Oastler's father; a more benevolent and excellent man he believed this country had not produced; and if the great pains taken by that deceased, and he might then say his much lamented, friend to stem the horrors of war, and prevent the shameful expenditure of public money, which led to the imposition of the burden under which they now laboured, had been successful, they might have obviated the necessity for that discussion. He (Mr Baines) was an humble instrument in the late Mr Oastler's hands on that

occasion, but they were not supported as they ought to have been by the manufacturers. If their efforts had been successful, he believed that a great deal of the calamity and distress under which the country was labouring, and the wretchedly long hours would have been prevented. So that Mr Oastler was a kind of hereditary supporter of benevolence, because he inherited it from his father." Mr Oastler thus had, from his father, a reputation for generous sympathies and an active interest in public affairs. Mr Oastler is well known as an apt, ready, and powerful political writer, having in a remarkable degree the faculty of expressing his opinions, with clearness and force, on any subject to which he has directed his attention; his experience of English society has been varied and extensive; his public letters and essays are more remarkable for keen observation and prescience of mind, than for book learning and scholarly polish. He is a bold, correct, and eloquent speaker, and was by the late Sir Francis Burdett justly designated "a natural and gifted orator." His appearance is manly and commanding, his voice powerful, his enunciation distinct, his matter and manner English throughout. Mr Oastler's success as an orator has not been effected by startling contrasts or exciting novelties; it is his rule to speak right on the things which his hearers themselves do know; few have equalled him in a statement of facts in plain words, appealing directly to the understanding, or, in giving home thrusts by the daring use of an opponent's admissions in argument. Mr Oastler has oftentimes made thousands of men, women, and children to glow, tremble, and weep, because of the force of homely words, expressed with feeling and earnestness. When assailed by formidable opposition, he rises to the highest pitch of kindled energy, there is then in his manner a "touch-me-not" air, which has often proved appalling to men not deficient in moral courage. He is a man of keen sensibilities, generous sympathies, strong

attachments, and untiring perseverance. When he entered the field of religious, social, and political controversy, as the advocate of the claims of the factory workers to legislative protection, he was in the prime of manhood, a respected, honoured, and influential citizen of the West Riding of his own native Yorkshire. He is remarkable for simple habits, and his fondness of little children whose society he cultivates and enjoys. His pleasures are those of the fireside and the garden, and in the home-circle of every house he visits, his name is a household word.

Though Mr Oastler had lived for many years in the heart of the manufacturing district of Yorkshire, had often visited the poor, had in their own cottages and in the Leeds Infirmary seen many sickly factory children and factory cripples,—the causes of their sickness, deformity, and lameness were unknown to him. Mr Oastler had often expressed his opinion that the working men of the manufacturing districts suffered, physically, from various causes; that it would be consistent with the professions of those who advocated negro emancipation (with whom he in principle cordially agreed, and actively co-operated), to endeavour to discover those causes, and to apply remedial measures; in his own words—"to apply their avowed principles to the wants of their own neighbours." Of the actual facts of the factories he was then ignorant. When he returned from the various towns of the West Riding to his home, and saw the factories lighted up at night, he accepted of "these sights as signs of prosperity."

In 1830 Mr Oastler was on a visit to his friend, Mr John Wood, of Horton Hall (now of Thedden Grange, Hampshire), a very kind-hearted man, and, at the time referred to, an extensive manufacturer in the town of Bradford, Yorkshire. Mr Wood was wealthy and generous; moved by a sense of duty, he had in vain endeavoured by his own private influence to reform the factory system. Mr Wood knew Mr Oastler well; in the course of conversation one

evening Mr Wood said: "Mr Oastler, I wonder you have never turned your attention to the factory system." "Why should I? I have nothing to do with factories," was Mr Oastler's reply. "That may be," rejoined Mr Wood, "you are, however, very enthusiastic against slavery in the West Indies; and, I assure you, there are cruelties daily practised in our mills on little children, which, if you knew, I am sure you would strive to prevent." "Cruelties in mills?" exclaimed Mr Oastler, "I do not understand you; tell me." Mr Wood then informed Mr Oastler of much that Mr Wood knew; among other things, that in "his own mill, little children were worked from six o'clock in the morning to seven o'clock in the evening, and that the only break off they had was forty minutes at noon; which break was ten minutes more than any other millowner allowed. While in some mills in the neighbourhood the poor children were worked all that time without one minute of rest." Mr Oastler was astonished, and to his horror discovered "that little children were worked 14, 15, 16, and even 18 hours a day, in some mills, without a single minute having been set apart for meals, and that implements of cruelty were used to goad them on to this excessive labour. Besides all this, in many mills they were cheated out of portions of their scanty wages by fines and other means of fraud. Worse still, they were often subjected to shocking indecencies, and they were brought up in total ignorance of their duties to God and to man." Mr Oastler was deeply impressed with all he had heard. Mr Wood was fully sensible of the horrors and vices of the factory system, and solicited from Mr Oastler a pledge that he would use all his influence in an endeavour to remove from the factory system the cruelties which were regularly practised in the mills. Mr Oastler has, in *The Home* (1851), a periodical of which he was the editor, narrated a circumstance which very clearly indicates the state of his own mind and that

of Mr Wood :—"You will, Edwin, remember," wrote Mr Oastler, "that I was on a visit at the house of a dear friend, a millowner, and that he, to my great surprise, had informed me that I lived not far from a town where human beings—little children, boys and girls—were daily sacrificed for gold. I told you how much I was horrified at his recital. With feelings which I will not attempt to describe, I went to bed. I had requested the servant to call me at four in the morning, having occasion to ride some miles to an early appointment. When my friend's valet aroused me, he said,—‘My master wishes to see you, Sir, before you leave ;’ he afterwards showed me into his master's bedroom. My friend was in bed, but he was not asleep; he was leaning upon a table beside his bed. On that table were placed two candles, between them was the Holy Bible. On my advancing towards the side of his bed, he turned towards me, reached out his hand, and, in the most impressive and affectionate manner, pressing my hand in his, he said, ‘I have had no sleep to-night. I have been reading this book, and in every page I have read my own condemnation. I cannot allow you to leave me without a pledge, that you will use all your influence in endeavouring to remove, from our factory system, the cruelties which are regularly practised in our mills. . . . I promised my friend that I would do what I could. I felt, Edwin, that we were, each of us, in the presence of the Highest. I knew that that vow was recorded in Heaven. I have kept it, Edwin, the grace of God having upholden me; I have been faithful. Trusting in the same power, old and feeble as I am, I hope to be faithful even unto death.’"

In the morning of the next day after the conversation with Mr Wood, Mr Oastler adopted the first step towards the fulfilment of his promise; he wrote a letter narrating the results of his experience at Bradford, and addressed

the same to the Editors of the *Leeds Mercury*, then, as now, one of the most influential journals in Yorkshire. This letter was after publication subjected to severe and protracted criticism. In a historical sense, this letter is valuable, as being the foundation of what might not improperly be called, "the active Ten Hours' Bill movement;" the first Sir Robert Peel, as has been shown, had, in the vain hope of conciliating opposition, abandoned the Ten Hours' limit as the rule for factory labour, no legal regulation was then applicable to other than cotton factories. When Mr Oastler addressed the Editors of the *Leeds Mercury*, on the condition of children employed in woollen and worsted factories, he was unacquainted with the labours of Gould, Peel, and their coadjutors; he had resolved to light a flame which should be seen throughout England, and the burning of which was subsequently watched with interest throughout Europe and the American Union. Mr Oastler's first letter on the factory question deserves attention for the facts it contains, and the key which it affords to the state of the mind of the writer, when he entered on what has proved, to him and to his country, a momentous labour:—

"YORKSHIRE SLAVERY.

"To the Editors of the Leeds Mercury.

" 'It is the pride of Britain that a slave cannot exist on her soil; and if I read the genius of her constitution aright, I find that slavery is most abhorrent to it—that the air which Britons breathe is free—the ground on which they tread is sacred to liberty.'—*Rev. R. W. Hamilton's Speech at the Meeting held in the Cloth-hall Yard, Sept. 22nd, 1830.*

" Gentlemen,—No heart responded with truer accents to the sounds of liberty which were heard in the Leeds Cloth-hall yard, on the 22nd instant, than did mine, and from none could more sincere and earnest prayers arise to the throne of Heaven, that hereafter slavery might

only be known to Britain in the pages of her history. One shade alone obscured my pleasure, arising not from any difference in principle, but from the want of application of the general principle *to the whole empire*. The pious and able champions of *negro* liberty and *colonial* rights should, if I mistake not, have gone farther than they did; or perhaps, to speak more correctly, before they had travelled so far as the West Indies, should, at least for a few moments, have sojourned in our own immediate neighbourhood, and have directed the attention of the meeting to scenes of misery, acts of oppression, and victims of slavery, even on the threshold of our homes.

“Let truth speak out, appalling as the statement may appear. The fact is true. Thousands of our fellow-creatures and fellow-subjects, both male and female, the miserable inhabitants of a *Yorkshire town*, (Yorkshire now represented in parliament by the giant of anti-slavery principles,) are this very moment existing in a state of slavery, *more horrid* than are the victims of that hellish system—‘*colonial slavery*.’ These innocent creatures drawl out, unpitied, their short but miserable existence, in a place famed for its profession of religious zeal, whose inhabitants are ever foremost in *professing* ‘temperance’ and ‘reformation,’ and are striving to outrun their neighbours in missionary exertions, and would fain send the Bible to the farthest corner of the globe—ay, in the very place where the anti-slavery fever rages most furiously, her *apparent charity*, is not more admired on earth, than her *real cruelty* is abhorred in heaven. The very streets which receive the droppings of an ‘Anti-slavery Society’ are every morning wet by the tears of innocent victims at the accursed shrine of avarice, who are *compelled* (not by the cart-whip of the negro slave-driver) but by the dread of the equally-appalling thong or strap of the overlooker, to hasten, half-

dressed, *but not half-fed*, to those magazines of British infantile slavery—the *worsted mills in the town and neighbourhood of Bradford!!!*

“Would that I had Brougham’s eloquence, that I might rouse the hearts of the nation, and make every Briton swear, ‘These innocents shall be free!’

“Thousands of little children, both male and female, *but principally female*, from seven to fourteen years of age, are daily *compelled to labour* from six o’clock in the morning to seven in the evening, with only—Britons, blush while you read it!—*with only thirty minutes allowed for eating and recreation*. Poor infants! ye are indeed sacrificed at the shrine of avarice, *without even the solace of the negro slave*; ye are no more than he is, *free agents*; ye are compelled to work as long as the *necessity* of your needy parents may require, or the cold-blooded avarice of your worse than barbarian masters *may demand!* Ye live in the boasted land of freedom, and *feel* and mourn that *ye are slaves*, and slaves without the only comfort which the negro has. He knows it is his sordid, mercenary master’s interest that he should *live*, be *strong* and *healthy*. *Not so with you*. Ye are doomed to labour from morning to night for one who cares not how soon your weak and tender frames are stretched to breaking! You are not mercifully valued at so much per head; this would assure you at least (even with the worst and most cruel masters) of the mercy shown to their own labouring beasts. No, no! your soft and delicate limbs are tired and fagged, and jaded, at only *so much per week*, and when your joints can act no longer, your emaciated frames are cast aside, the boards on which you lately toiled and wasted life away, are instantly supplied with other victims, who in this boasted land of liberty are HIRED—not sold—as slaves, and daily forced to *hear* that they are free. Oh! Duncombe! Thou hatest slavery—I know thou dost resolve that ‘Yorkshire children shall no

more be slaves.' And Morpeth! who justly gloriest in the Christian faith—Oh, Morpeth! listen to the cries and count the tears of these poor babes, and let St Stephen's hear thee swear 'they shall no longer groan in slavery!' And Bethell, too! who swears eternal hatred to the name of slave, when-e'er thy manly voice is heard in Britain's senate, assert the rights and liberty of Yorkshire youths. And Brougham! thou who art the chosen champion of liberty in every clime! oh bend thy giant's mind, and listen to the sorrowing accents of these poor Yorkshire little ones, and note their tears; then let thy voice rehearse their woes, and touch the chord thou only holdest—the chord that sounds above the silvery notes in praise of heavenly liberty, and down descending at thy will, groans in the horrid caverns of the deep in muttering sounds of misery accursed to hellish bondage; and as thou sound'st these notes, let Yorkshire hear thee swear, 'Her *children* shall be free!' Yes, all ye four protectors of our rights, chosen by freemen to destroy oppression's rod,

'Vow one by one, vow altogether, vow
With heart and voice, eternal enmity
Against oppression by your brethren's hands;
Till man nor woman under Britain's laws,
Nor son nor daughter born within her empire,
Shall buy, or sell, or HIRE, or BE A SLAVE!'

"The nation is now most resolutely determined that negroes shall be free. Let them, however, not forget that Britons have common rights with Afric's sons.

"The blacks may be fairly compared to beasts of burden, *kept for their master's use*; the whites, to those *which others keep and let for hire*. If I have succeeded in calling the attention of your readers to the horrid and abominable system on which the worsted mills in and near Bradford is conducted, I have done some good. Why should not children working in them be protected by legislative enact-

ments, as well as those who work in cotton mills? Christians should feel and act for those whom Christ so eminently loved, and declared that ‘of such is the kingdom of Heaven.’—I remain, yours, &c.,

“RICHARD OASTLER.

“Fixby Hall, near Huddersfield, Sept. 29, 1830.”

The reading of Mr Oastler’s letter caused much excitement. As originally written, it was signed “A Briton,” Mr Oastler was wishful not to be known as the author, but the senior editor of the *Mercury* insisted on having a real name attached, Mr Oastler consequently appended his signature. Many there were filled with astonishment, some denied the existence of the evils complained of, others affirmed that if Mr Oastler’s signature had not been appended to the letter in the *Leeds Mercury*, they could not have believed that such things were, the late Mr Baines (senior editor of the *Leeds Mercury*) admitted that the evils stated therein, if true, constituted a real grievance. A keen controversy followed in the Leeds press, chiefly in the columns of the *Leeds Mercury* and *Leeds Intelligencer*. In this warfare, Mr Oastler was completely triumphant; like a strong and practised wrestler, he closed upon his opponents, and cast them from his arms on the ground. Every fact relating to the labour of children in factories, stated in Mr Oastler’s first letter, was proved to be correct; the complaints of his opponents were ultimately confined to the tone and manner of the writer; the intense and protracted interest caused by the letter being a very satisfactory reply to such objections. The cruelties in the mills were proved not to be confined to Bradford, they extended throughout the woollen, flax, and worsted districts. A correspondent of the *Leeds Mercury*, Mr R. Webster, in a letter dated “Halifax, 8th November, 1830,” wrote: “There is not a mill in the whole town of Halifax which

allows a single moment either for breakfast or tea,—and the time for dinner is much the same as those in Bradford. But I believe the hours of labour to be longer than those at Bradford. None of the mills in this town stop sooner than half-past seven, and some of them not before half-past eight or nine o'clock,—and the attendance of the children is required at six in the morning.” “Let any one walk through the mills at the time of breakfast, and see the poor children eating their coarse fare, whilst at the same time they must attend to the respective machines at which they are employed—like beasts of burden, they must eat and work,—and I am sure that an individual, after seeing this, if he were a Christian—if he were a man, he would blush to see the degradation to which those children were brought by the avarice of their employers. I do not, however, mean to charge this epithet upon all the manufacturers of this town—quite the reverse, I know there are honourable exceptions; but at the same time there are individuals who would not care to exact labour from them both day and night, consequently, those who are possessed of more humanity are obliged, however reluctantly, to follow the same rule.” On November 11th, 1830, the editor of the *Leeds Intelligencer* wrote:—“It is generally allowed that the *principle* of Mr Oastler’s statement is right and commendable; but that he has somewhat sinned in his manner of laying it down. If we may presume to offer advice, we would recommend an immediate meeting of the Bradford spinners; let them begin by a proper understanding amongst each other, and we are sure that they will end as they ought to do—by a change of plan, by allowing proper hours for refreshment and relaxation; and certain we are that they will not thereby lose in pocket, while they will gain in character and inward satisfaction. If they neglect to do something of this sort, the public will probably take

the matter up, and parliament may be called upon to protect the children by a legislative enactment, similar to that which applies to the cotton manufactories. But we know the Bradford manufacturers too well to suppose that an act of parliament is necessary to induce them to act with common humanity." From the publication of Mr Oastler's original letter, which, though dated September 29th, 1830, was not published in the *Leeds Mercury* until October 16th of the same year,—from this date until November 22nd, a keen newspaper controversy was waged on the condition of children employed in factories, the greatest interest prevailed, the working men were so gratified with Mr Oastler's exertions on their behalf, that though, in most cases, radicals of the Cobbett and Hunt schools, they openly expressed their approval of Mr Oastler's proceedings, knowing him to be a "Church and King tory of the old sort;" at one of their Huddersfield public meetings, they unanimously adopted the following resolution: "That the thanks of this meeting are eminently due, and are hereby given, to Richard Oastler, Esq., for his able and manly letters to expose the conduct of those pretended philanthropists and canting hypocrites who travel to the West Indies in search of slavery, forgetting that there is a more abominable and degrading system of slavery at home." It was evident that the discussion had reached a point at which it could not rest, the public mind had been thoroughly awakened, not a few of the millowners of the West Riding of Yorkshire felt their humanity and consistency at stake: to quote the words of one of themselves, "Mr Oastler's facts were so strong and so often repeated that I felt my honour impugned; to move in the matter was a necessity."

The author of this discussion stated his whole views on the factory question, briefly, but strongly; those views were in advance of the mind of the age. We repeat them in

his own words:—"The factory system, as at present conducted, is, in every sense of the word, the worst that can be; with proper arrangements it might be made the best. The skill and ingenuity of man is now made to destroy the happiness and comfort of many, merely for the gain of a few: it might be made instrumental to every man's increase in comfort and happiness. The factory system is necessary, but it is not necessarily an evil; it is conducive to the misery of many—it might be made advantageous to all. It is a system which drags in the train of the remorseless tyrant the man of benevolent mind; it compels the kind-hearted master either to relinquish business altogether, or in some measure to copy the cruelty of the oppressor. The system which impoverishes, enslaves, and brutalises the labourer can never be advantageous to any country. The nation's strength and stability is built, if built for perpetuity, on the solid basis of a contented and happy population. The constitution of this country and the present [unregulated] factory system cannot long exist together; their principles are as opposite as light and darkness." Those who for thirty years have watched the social condition of England will be enabled to weigh the justness of these observations, published under the signature of Richard Oastler in 1830.

On November the 22nd, in the words of the *Leeds Mercury*, "A numerous and highly respectable meeting of the worsted spinners of Bradford, and of the trade generally, convened by twenty-three of the principal firms in that town, was held at the Talbot Inn, for the purpose of promoting a legislative enactment to diminish and limit the hours of labour in worsted mills, and to effect other regulations connected therewith."

The gentlemen who constituted this most influential meeting were unanimous in their condemnation of long hours in factories—all admitted the evils of the unregulated

factory system; owned that the competition of rival manufacturers had been so great that in self-preservation they were forced to follow the custom of the trade, in order to be enabled to meet their competitors in the market; that it was desirable that the system should be changed; that children employed in factories should not be overworked; that time should be allowed for rest and recreation; that those desirable results could only be secured by a legislative enactment, binding on all. The services of Mr Oastler were duly acknowledged. These proceedings were hailed with satisfaction by the operatives, and approved by the press. The spirit of the principal local journals may be inferred by the perusal of the following paragraph, published in the *Leeds Mercury* of November 27th, 1830:—

“We refer with great satisfaction to what may be called the practical result of the discussions which have taken place in this paper on the hours of labour for children in the worsted manufactories. Without in any degree altering the opinion we expressed at the time of Mr Oastler’s first letter, we feel that it is due to that gentleman to say that the public are indebted to him in a high degree for his humane exertions in favour of those who, by reason of their tender age and dependent situation, could not speak for themselves. The most appropriate reward he can receive will be that meed of gratitude to which he is entitled. The manufacturers of Bradford are also doing themselves great honour, and we trust that their laudable example will be *generally* followed. It will be seen that the Bradford petition is to be presented by Lord Morpeth [now the Earl of Carlisle], who interested himself to complete the regulations in cotton mills, moved by Mr Hobhouse in May 1829, and whose disposition and information so well qualify him for the task.”

The editor of the *Leeds Intelligencer* expressed his satisfaction in terms not less distinct than those we have quoted from the columns of the *Leeds Mercury*.

Simultaneously with the Yorkshire movement for regulating the hours of labour in factories, a movement for a similar purpose was proceeding in Lancashire. The evasions of the Act applicable to cotton factories, and the growing evils of the factory system, had induced some Lancashire millowners to consider the propriety of appealing to parliament for a more efficient measure of regulation than the then existing law. These Lancashire millowners had in their contemplated measure resolved to apply to parliament for a general law applicable to cotton, worsted, linen, silk, flax factories, &c. A correspondence between the Lancashire and Yorkshire millowners, favourable to a restriction of the hours of factory labour, followed, the result of which was the introduction into parliament, by Sir John Hobhouse (now Lord Broughton) and Lord Morpeth, of a bill, the provisions of which, as originally introduced, applied to cotton, woollen, worsted, linen, and silk factories. In it was proposed the restriction of working hours to "not more than eleven and a half on any one day, nor more than eight and a half hours on a Saturday," with an allowance to each person in the course of every day, of "not less than one half hour to breakfast, and not less than one hour to dinner;" that no person under eighteen years of age shall be allowed to work beyond those hours; that no child shall be employed in any description of factory labour under nine years of age,—the provisions of the bill to be in force on and after the first day of August, 1831. Mr Hobhouse's bill, as originally suggested, met with the entire approval of the owners of factories in favour of regulation. The operatives were unanimous and enthusiastic in its support; they believed that their hour for deliverance from bondage was at hand; they held many meetings, and forwarded to parliament many petitions.

In order to convey a sense of the feeling which then

pervaded the minds of the operatives, we extract from the reports of their meetings the following resolutions:—

“That the operatives, as individuals employed in the woollen, flax, linen, worsted, cotton, and silk mills and factories, have long entertained a deep conviction of the necessity of a legislative enactment, to protect from the baneful effects of the present long hours of working the children engaged therein; and have learnt with heartfelt satisfaction of the introduction into the Commons' House of Parliament of a bill for that purpose.

“That it is the opinion of this meeting, that such bill will produce the beneficial results required, and likewise tend to ameliorate the condition of the labouring classes in general.

“That our best and warmest thanks are due to J. C. Hobhouse, Esq., as the mover, and Lord Morpeth as the seconder, of this bill, for the manly, independent, and humane manner in which they have come forward to propose so just, so humane a law.”

A feeling for a public measure so unanimous and powerful bade fair for success; all who desired an improved factory system were hopeful. A dark cloud was gathering, unseen and unexpected. A body of influential mill-owners, chiefly resident in the neighbourhood of Halifax, had resolved to oppose the bill. The first alarming sign of this formidable opposition appeared in the form of a *leader* in the columns of the *Leeds Mercury*, avowedly the condensation of the opinions of “practical men” on the question. A meeting of the millowners opposed to factory legislation was subsequently held at Halifax, at which a series of resolutions were passed, setting forth the views of those present. These resolutions deserve especial attention, containing, as they do, the opinions of their supporters on subjects of social interest beyond the question of factory labour.

They may safely be accepted as the political and economical creed of the majority of the millowners opposed to factory legislation, and as an epitome of their principles and desires. The meeting was convened on the 5th of March, 1831. Mr James Akroyd, of Halifax, in the chair, on which occasion it was unanimously resolved:—

“1st. That this meeting views with alarm the measures proposed in the House of Commons, to curtail the hours of labour in mills and factories, and to limit the ages of children employed in the same.

“2nd. That the condition of those employed in worsted mills does not warrant the conclusion that the present usages of the trade are injurious to the health and comforts of this class of operatives ; and that the present term of labour (*viz.*, twelve hours per day) is not attended with any consequences injurious to those employed, and is not more than adequate and necessary to provide for their livelihood.

“3rd. That an enactment which will abridge the hours of labour, or limit the age of children employed in worsted mills, will produce the following effect:—1st. It will cause a proportionate reduction of the wages of this class. 2nd. It will materially cripple the means of those who have large and young families, who, in many instances, are the main support of their parents. 3rd. It will raise the price of goods to the consumers, which will affect the home trade considerably, and will produce the most serious effects upon the prosperity of this district, by tending to foster the manufactures of foreign nations, our trade with whom depends upon the cheap and advantageous terms on which we now supply them with goods, and whose manufacturers would be enabled by an advance of price successfully to compete with the British merchant. 4th. It will throw out of employment and the means of existence numbers of children now beneficially engaged in worsted mills, and a corresponding proportion of wool-sorters, combers, weavers, and all those other classes necessary to pro-

duce the present supply of goods. 5th. The agriculturists will also feel the effects of the diminished consumption of wool in no slight degree.

“4th. That the manufacture of worsted yarn is a much more healthy and wholesome employment than the preparing and spinning of cotton or flax, both as regards the material employed, and the temperature requisite for its advantageous manufacture, and that experience proves that the health and general comfort of the population employed in worsted mills is equal, if not superior, to that of any other extensive class of operatives.

“5th. That the age to which it is proposed to limit those employed in worsted mills will be inefficient in securing the advantages which are desired, in as much as the period between fourteen and twenty-one is the most critical period in the life of those employed, and that those of the ages between seven and fourteen are more capable of undergoing long continued labour, than those of the ages before named. For confirmation of this opinion, we would appeal to all medical men of the district.

“6th. That the character of the generality of master worsted spinners in respect to humanity, kindness, and considerate attention to those in their employ is unimpeachable, but that though there may be exceptions to this general and well-known fact, which this meeting is unacquainted with, yet that no legislative enactment can effectually protect innocence and poverty from the fraud and tyranny of the unprincipled, and from those evils inseparably connected with, and incidental to, all manufactures in the present state of society.

“7th. That this meeting is impressed with a sense of the numerous hardships to which the labouring classes are subject, and that it declares it to be the bounden duty of all intrusted with the superintendence of mills and manufactories, to adopt every means by which the health and comfort of these classes

may be best secured ; but that so far from being justly chargeable with being the authors of the present protracted hours of labour, this meeting cannot submit to the imputation of avarice and injustice, and tyrannous conduct, whilst the fact is so notorious that it is the *actual necessity* for voluntary and daily labour, to which the operative classes are subjected by the political and domestic circumstances of this country, *which alone* call for and demand the present long hours of application and labour.

“8th. That until the burthens which now press upon the labouring classes are removed, all measures which tend to narrow the resources, obstruct or confine the industry, or reduce the rate of wages of the labouring classes have a positively injurious character, and ought to be deprecated and opposed by every humane and considerate individual.

“9th. That when this meeting consider the present state and future prospects of trade at home and abroad, when it contemplates the rapid steps of foreign competitors in the various markets of the world towards perfection in manufactures—when it considers the condition of the people of this country, whose means to purchase worsted fabrics are most seriously diminished in consequence of the oppressive nature of taxes, monopolies, and restraints upon capital and industry, it cannot but feel convinced that every new impediment to the free exercise of industry and labour will be an additional grievance and hardship on their lot, and will be not less detrimental to the comforts and interests of the poor than to the enterprise and energies of their employers.

“10th. That the British manufacturer is subject to a tax on corn, which operates as a heavy tax on labour, whilst rival manufacturing nations are exempt from this impost on trade ; and that in addition to direct taxes on oil and soap, which are articles essential to the existence of the worsted manufacture, he is subject to the unjust influence of a monopoly, which denies him free access to our possessions in India,

where there are millions of subjects who might rapidly become consumers of worsted fabrics.

“11th. That such being the difficulties with which the manufacturer has to contend, it would be inflicting the most injurious effects upon this branch of industry (effects which are totally unwarrantable on the grounds of humanity and kindness to the labouring classes), to curtail the hours of labour, and limit the ages of children employed in worsted mills, unless the legislature shall at the same time fix the amount and rate of wages. That the impossibility of any legislative enactment to regulate these details is obvious, and that it cannot secure the labouring classes from the inevitable reduction in wages, which will be the consequence of shorter hours of labour, and of fluctuations of trade, whilst it will fetter their hands in times of brisk demand.

“12th. That there are many worsted spinners in this district, whose manufactories are dependent upon a due, and not excessive, supply of water, and that they have considerable interruptions to their trade in seasons of flood and drought, and that any restrictions upon the privilege hitherto enjoyed of working such mills in the wet season of the year, certain extra hours to compensate for the loss of time occasioned by the above casualties, would materially depreciate the value of such factories, and would be very injurious to the working classes, inasmuch as the proprietors would be unable to pay their operatives full wages, when the circumstances enumerated compel them to suspend their labour.

“13th. That this meeting is convinced of the pernicious tendency and effects of all *legislative enactments*, whether protective or restrictive, which propose to regulate the details of trade and manufactures:—1st. Because they cannot equitably proportion the restrictions on industry to the circumstances of every individual case to which they apply, &c. 2nd. Because the consequences which they produce on the general interests of the trades affected by them, are more

detrimental than the evils which they are intended to remedy.

“14th. That a petition to both Houses of Parliament be drawn up, embodying those resolutions, and praying, that if on the balance of evidence tendered before a committee of the House of Commons, and on consideration of all the effects such an enactment will produce, it shall seem necessary to their honourable house to resort to interference with present established custom and usage in the worsted trade, that their honourable house would be pleased to adopt twelve hours per day, or seventy-two hours per week, as most fit, and least injurious term of labour, under present circumstances, to those employed.”

The publication of these resolutions caused, in the minds of the operatives, very considerable alarm, but contributed to increase, rather than to diminish, their exertions. Mr Oastler, in a letter of remarkable energy and acuteness, examined these resolutions in their order. As was customary, he made good his positions on scriptural grounds, and after reviewing the arguments of his opponents, much to their annoyance, he presented to them, the following synopsis of their principles:—

“1st. God’s laws must bend and break at the call of avarice and self-interest!

“2nd. Money is of more value than principle, morality, and religion!

“3rd. Government is no longer of any use, because it is unable to protect the innocent and weak against the rapacity of the guilty and strong!

“4th. The state of the trade of this country is really such, that its very existence depends upon excessive application and overworking on the part of the operatives!

“5th. It is better that the labouring classes should live by the excessive and overpowering toil of their infants, than

that the parents should labour for the support of their offspring!

“6th. The exorbitant taxes which we are obliged to pay, the loss we sustain by the East India monopoly, the corn laws, and every other abuse, as a matter of clear right and justice, must and ought to be paid and borne out of the blood, bones, and sinews of our infantile population!”

Mr Oastler's letter was read with avidity by all classes, its arguments became in the hands of the operatives, weapons of attack on, and defence against, the opposing millowners. The question increased in interest in the mind of the public in the manufacturing districts. Crowded meetings of operatives were often held, speeches were made, petitions signed and forwarded to parliament. Meantime the opposing millowners were also active, their influence united with that of others, principally Scotch millowners, was brought to bear on the minds of the members of the House of Commons. Mr Hobhouse's bill underwent many modifications; he finally consented to a measure applicable to cotton mills only, rendering it unlawful to work any child in a cotton Factory, who should be under eighteen years of age, more than sixty-nine hours per week.

The disappointment and regret at the fate of Mr Hobhouse's bill, throughout the manufacturing districts, particularly the West Riding of Yorkshire, was great. The factory operatives of the West Riding felt that their fondest hopes had been blighted, that the relief of their little ones from excessive toil was still distant, they, however, did not yield to despair, they turned their eyes by common consent to Fixby Hall; they were confident that they had in Mr Oastler a bold and faithful friend. They *trusted* not in vain.

There was evidently awakened in the very heart of England a home war against the unregulated factory system. Its supporters, however, had increased in strength. It was

impossible to defend the cruelties of the Factory system, when and where acknowledged, but the nature of the remedy was a fertile source of discussion. There had arisen in this country a school of political economists, who professedly pointed to *The Wealth of Nations* as the text-book of their practical philosophy, though they, as a rule, omitted to state that that celebrated book contained contradictory doctrines; they preferred popularizing the portions of Adam Smith's great work, which supported what they believed to be their own interests, failing to take any notice of portions of the same book fundamentally opposed to their favourite dogmas. These political economists were "on principle" opposed to all state interference between labourers and capitalists; they assumed that they were in possession of treasures of wisdom unknown to their opponents, that the principles of the ancient policy of England were erroneous, and in practice, ruinous to the interests of a nation; they were powerfully represented in the press, and exercised a very considerable share of influence through the pulpit; they assumed to themselves the distinction of being in favour of "the greatest happiness to the greatest number;" they maintained that each man in all his actions pursued his own pleasure, and that as a rule the happiness of the whole community would be most surely promoted, by allowing each individual member to work out his own ends in his own way, without restraint or control. This body of political economists possessed great talents and wealth, united with untiring industry, and were very ably represented in the legislature by a rising school of statesmen, of which Mr (now Lord) Brougham was the active leader. Circumstances had very materially changed since the first Sir Robert Peel had found it necessary, in defence of the interests of the manufacturers, to check the humanity of the House of Commons. We have noted the discrepancy which existed between Adam Smith and his influential disciples, the inconsistency belonged to the master,

the followers were consistent and faithful to that portion of his doctrines which they had adopted, and therefore, unsparingly condemned Poor Laws, Usury Laws, and Factory Laws as evils not to be tolerated. The intellectual vigour and mental resources of the political economists, backed by the wealth, influence, and business talent of the millowners opposed to regulation, increased the difficulties in the path of Factory Legislation to an incalculable extent.

CHAPTER VIII.

THE PRINCIPLE OF FACTORY REGULATION CONSONANT WITH THE SPIRIT OF THE LAWS OF ENGLAND—MR OASTLER'S APPEAL TO THE WORKING CLASSES—THE FIXBY COMPACT—CHOICE BY THE SUPPORTERS OF FACTORY LEGISLATION OF MICHAEL THOMAS SADLER, ESQ., M.P., AS PARLIAMENTARY LEADER—SUMMARY OF HIS PRINCIPLES.

FACTORY Regulation, considered apart from all extraneous subjects, was simple and easy of comprehension—here was excessive and unnatural labour, confessedly, existing in open defiance of the laws of health; that it was desirable to check such a practice, was a truth which not any reasonable man could doubt. It was not unreasonable, that as the persuasion and endeavours of the benevolent had failed to introduce the required rules favourable to health, those anxious for their establishment should ask for the force of Law. They had by the highest authorities been taught, that all human laws must concord in spirit with the law of nature, and the law of revelation, they knew that it was a part of the common law of England to protect the health of the nation, and if necessary, that it was the duty of the legislature by statute law, to put down all practices injurious to the health of the public. The supporters of Factory regulation were conscious that the unregulated Factory system was opposed to the laws of nature and revelation, injurious to the public health and morals; they were assured that it was the duty of all the individuals in a state, to conform to the rules of propriety and good neigh-

bourhood; that property itself was the creature of society, and could only exist rightfully and permanently on conditions consistent with the welfare of the whole community; that the very existence of society depended upon its right to restrain by human laws, all the practices of individuals opposed to its welfare. Knowing these things, and having had their attention directed to the enormous and growing evils of the unregulated Factory system, Mr Wood and his coadjutors at Bradford were not disposed to sit quietly down under the horrors of Yorkshire slavery, because Sir John Hobhouse had failed to legislate for woollen, worsted, flax, and silk mills.

Mr Oastler's opinion on the course proper to be pursued was soon made known. In the *Leeds Intelligencer*, of October 20th, 1831, he published the following letter; it tells its own tale, and deserves especial attention; it is redolent with facts from the factories, and indicates, on the part of the writer, energy, decision, and foresight:

“ SLAVERY IN YORKSHIRE.

“ TO THE WORKING CLASSES OF THE WEST RIDING OF THE COUNTY OF YORK.

“ My Friends,—Sir J. C. Hobhouse's bill for shortening the hours of labour in ALL factories is lost! Yes, the bill, on which you had fixed your fondest hopes, is vanished! Aye, my friends, that bill which had enlivened the hearts of your poor Factory children, which had for once implanted the gleam of hope in *their* hearts, and taught *them* to chaunt in songs of praise the name of Hobhouse—is abandoned by its author! Your hopes—your infants' hopes, are suddenly blighted! Your fond anticipations of your children's happiness and liberty are for a season blasted. The harps which your little ones had prepared to attune in grateful strains to the songs of liberty, must now be hung upon the willows—for how can they sing the song of freedom in the land of tyranny? Bend not, however, to despair—but trust in God, and in yourselves—

the God of justice, of mercy, and of truth, still reigns—and he will plead your cause, and make the unfeeling iron-hearted masters, erewhile, relent; but if they still resist, and steel themselves against his laws, in anger he will speak, and make the oppressors quake.

* * * * *

“After all, we are told that we live in the land of liberty; and if we attempt to rescue British infants from slavery, we are, forsooth, the friends of the slave trade, and are only raising the hue and cry to turn the attention of the nation from West Indian slavery. Yes, my fellow-countrymen, this has been said a thousand times since the factory system was exposed. The real friends of tyranny have put on the mask of philanthropy, and, with the cry of ‘no slavery,’ would rivet the chains upon *your* children, all the time persuading you they are the only ‘Liberals’ of the day. From such turn away! And be ye assured that no man, be his pretensions what they may, can really wish to emancipate the poor black slave in the West Indies, who refuses you his aid and assistance in emancipating *your* children from a state of slavery more horrid than that by which the infants of the slaves in the West Indies are cursed. Be duped no longer! Willingly lend your assistance to emancipate black slaves; but *imperatively* require from those members of parliament, ministers of religion and its professors, as well as the ‘*factory masters*’ who solicit your aid in favour of the blacks, that they shall prove their sincerity, and that they really do hate slavery, by encouraging and signing petitions in favour of ‘ten hours a day’ as the limit of your children’s work. If they refuse this, you will need no further proof that they are no real friends of liberty, however ‘liberal’ they may profess themselves to be, bring them to this touchstone, and you will then either tear off their ‘liberal’ mask, or compel them to join you in emancipating your little ones. It is your bounden duty, my

countrymen, as it is your interest, no longer to be supine. I do not say you have been deceived by any of those persons who pledged themselves; but I do say you have a right to know why the bill, after having passed in the committee, was altered when it came into the House. For the future your path is plain. Let no promises of support from any quarter sink you to inactivity. *Consider that you must manage this cause yourselves*, nor think a single step is taken so long as any constitutional effort is left untried. Establish, instantly establish, committees in every manufacturing town and village, to collect information *and publish facts*. The public, generally, do not know what it is; then tell them how it has gone on destroying the health and morals of the people; how it operates in families by preventing the growth of those parental and filial affections which nature has implanted in every breast, but which this hateful system habitually eradicates. Show also how the baneful effects of the destruction of these feelings, afterwards, operate on society! Tell, how the factory system beggars the industrious domestic manufacturer! *Count, if you can, the hundreds of respectable families who have been driven from comfort and independence by the all-powerful operation of this monopolising system!* Point to the poor rates, and show how it has filled the ranks of the paupers; and never forget that these 'liberal factory masters' are not quite so 'liberal' as the tyrannical slaveholder! The latter provides for his slaves when they are weak, or maimed, or sick, or aged, and when they can no longer work. But the former, with a 'liberality' unknown in the West Indies, after they have maimed or weakened their work-people, or when they have worked them till they can work no more, turn them out, *for you who can work to support*, thus swelling the poor rates and lessening your earnings. Tell the shopkeeper, the butcher, the farmer, and the artisan, how this destructive system curtails the income of his customers, and increases

the demand upon his funds. Yes, yes! bring all these facts before the public, and show the hideous monster in his native glare. Then ask, shall he go on conquering and to conquer, *until the manufacture of the empire is concentrated under one large roof, and the world is supplied by one gigantic firm?* Till human nature is almost physically and morally destroyed, *and all the inhabitants of this land shall be the slaves of one great manufacturing nabob.* Let your committees call on every Christian, and particularly on every Christian minister, and respectively solicit their aid. Surely no follower of Christ can withhold his assistance. In due time call public meetings, and there plead the cause of the poor infant sufferers, and expose the horrors of the factory system; then prepare petitions to parliament, praying it to interfere in the sacred cause of suffering humanity; and, on every election for members of parliament, use your influence throughout the empire to prevent any man being returned who will not *distinctly and unequivocally pledge himself to support a 'Ten Hours a day and a Time-book Bill.'* If you will instantly begin to work on this plan, and *steadily pursue it*, you are sure of success. It is impossible that a system so cruel, so injurious, so unjust, so unchristian, can stand in a Christian country when once the eyes of the public are open to its horrors. *Your present failure points the road to your certain success!* Ye were lulled to drowsiness, and rested in false security, because ye trusted in the *nerve* of your friends and the *goodness* of your cause. But *now* you have plainly proved that you must win the day yourselves—that the little knot of cruel and oppressive spinners has more *powerful influence* than has that host of kind and tender-hearted masters who are your and your children's friends. Can it be believed that in England, in the nineteenth century, in a 'reforming' House of Commons, a bill limiting the hours of labour for children of nine years of age in ALL factories to twelve per day, should have been

refused, because it was 'too liberal!' Kind Heaven! and do we live in a Christian country? *And will not the ministers of Jesus interfere?* Every man who really and truly hates and abhors slavery must and will 'come over and help us' to destroy this horrid system of slavery in Yorkshire. Oh! be no longer led astray by any foolish cry got up for political purposes, but resolve, until you gain your prayer, your voice shall always be against the man who would perpetuate the present 'factory system.' Let your politics be 'TEN HOURS A DAY, AND A TIME-BOOK;' and whoever offers himself as a candidate at any future election, unless he will *solemnly pledge* himself to these two points, REFUSE HIM YOUR SUPPORT! Don't be deceived: you will hear the cries of—'No slavery'—'Reform'—'Liberal principles'—'No monopoly,' &c. But let your cries be—'No Yorkshire slavery'—'No slavery in any part of the empire'—'No factorymongers'—'No factory monopolists.' If you are determined, rest assured you will succeed. Your children will be liberated from a bondage greater than they would have inherited had they been born of negro slaves. Once more—be not led astray by the perpetual cry of 'liberal principles.' Depend upon it, the man who will refuse to 'liberate' your children is neither 'liberal' nor a 'hater of slavery.' Now then, my friends, for 'a long pull, a strong pull, and a pull altogether!' Victory is yours, if you are true to yourselves! *Let the tyrants know that you have sworn, 'OUR CHILDREN SHALL BE FREE!'*—I am, my friends, a sincere enemy to slavery in every form, in every part of the world, and your sincere well-wisher,

"RICHARD OASTLER.

"Fixby Hall, near Huddersfield, Oct. 10th, 1831"

Not any great object requiring the sanction of the legislature, can be accomplished, except through the concentrated force of public opinion; the first requisite for success is to acquire the confidence of the people. Mr Oastler's letter was

admirably adapted for that end; it stimulated all the sympathies of the human heart favourable to humanity; it aroused in the mind of every Christian a sense of duty; it was bold, and, in politics, boldness is often a source of strength; it was decided in tone, and left nothing to chance, but clearly outlined a plan of operation. The weight of Mr Oastler's letter was increased, because of a compact which had been entered into between himself and the leaders of the working men. A portion of the working men of Huddersfield, who took an active public interest in the politics of their time, appointed a deputation from their body to confer with Mr Oastler on the factory question. Mr Oastler's account of his interview with the working men, as published in the columns of *The Home*, is graphic and interesting. "One Sunday morning," wrote Mr Oastler, "when we were all preparing to go to church, about half-a-dozen working men, from Huddersfield, called upon me. They had read my letters in the newspapers about 'Yorkshire Slavery;' they informed me that they wished to converse with me about those letters of mine, and that they came on behalf of the factory-workers of Huddersfield, to thank me for them, and to offer their best assistance to me. I told them that 'I was going to church, that on any other day I should be glad to see them.' They replied, 'Sunday, Sir, is the only day on which we can come; we are in the mills all the rest of the week, from early in the morning till late at night.' This information brought home most forcibly to my mind, that the factory system and the fourth commandment could not work together. I thought the matter over, consulted with Mrs Oastler, and, seeing that it was clearly a work of charity, remained with them; the rest of the family went to church. Those men being factory-workers, gave me much useful information, invited me to communicate freely with them, and offered, cordially, to co-operate with me, in striving to

obtain a change in the factory system. I heard all they had to say with great interest. I was struck with their intelligence and civility. I had seen much of the poor when in sickness and distress, at their homes, in the workhouse, and the infirmary; but, until that day, I had never entered into communion with working men, on matters relating to themselves as a class, connected with their employers. A new field seemed to be opened unto me; these working men surprised me by the knowledge which they communicated, and the sensible manner in which they conveyed that knowledge to me. Still I thought there were hindrances to our working together, I being a tory and a churchman, they radicals and dissenters; therefore, after thanking them, I said, 'It will be better that we work separately, you taking your course, I taking mine.' They thought differently. After a good deal of conversation, we agreed to work together, with the understanding, that parties in politics, and sects in religion, should not be allowed to interfere between us. That agreement has never been broken."

The compact entered into between the working men and Mr Oastler had a very solid foundation, both were of opinion that labour was property, and entitled to the protection of the law. Every one acquainted with the late Mr Cobbett's *Legacy to Labourers*, a most able production, and with the opinions of the late Earl of Eldon on the Poor Laws, will not have much difficulty in apprehending why radicals and tories could unite on questions of industry. The Yorkshire radicals, at the time referred to by Mr Oastler, were readers of the works of Cobbett, and opposed to Brougham, on all the principal questions connected with the social arrangements of a state. Because of the organised correspondence of the radical committees of Yorkshire, the Huddersfield and Fixby compact was to Mr Oastler a lever of power, which to his honour he has never used for any other

purpose than that for which it was entered into,—“to lift the oppressed out of the mire into which, by those who preferred mammon to righteousness, they had been cast.”

Mr Oastler's letter to the working men of the West Riding was read, approved, and the advice therein contained acted upon in a solid and efficient manner; seed was then sown, destined to bear important fruit, nor was there wanting one able and willing to lead the question in parliament.

In the year 1829, the late Michael Thomas Sadler, published his celebrated work on *Ireland; its evils, and their remedies*. Mr Sadler's book having contained the synopsis of a reply to *Malthus on Population*, and having been written with ability on a subject of pressing interest, commanded considerable attention among those interested in social and economical theories; it contained the following exposition of the author's views on the factory question:—“Most writers and travellers have hitherto held it an unequivocal mark of barbarism, wherever the female sex has been degraded into common drudges; this, however, our present civilised system has long had the gallantry of doing in England, the effects of which, in a moral point of view, are too well-known to need pointing out or proving; and not only so, but even children are, by a solecism of speech, now become workmen, our language not having as yet accommodated us with an appropriate word for the occasion. The morning of life, which GOD and nature intended as a time of mirth and pleasure, is made that of imprisoning, unhealthful, and demoralising labour; and our political philanthropists wished to extend this system, instead of encouraging cultivation, though, no doubt, their feelings would be severely shocked at seeing such treatment transferred to the brute creation; as, for instance, were the farmer providing himself with gearing and implements for the purpose daily to labour a yearling foal at the

plough, aye, and nightly, if it suited his interests. Cruelty like this to animals would excite universal sympathy and abhorrence, and probably travel the nation in ten thousand paragraphs : it is thus our delicate susceptibilities find vent ! It is rather a melancholy task to trace the progress of the new system ; to anticipate the ultimate consequence, if every other interest amongst us must give way to it, is most appalling. In the times of ignorance, ‘man went forth to his work in the morning,’ he was the labourer of the family, and it sufficed ; but now his **INFANT CHILDREN** are demanded to make up his necessary means of subsistence, and too often become, not his assistants, but his rivals in the market of labour, to use the phrase of the times, so that himself is often now found there “all the day idle, because no man hath hired him,” when the fashionable system of policy coolly recommends his desertion. In good times as they are called, he sees his children go forth to their work in the *evening* (to save the capital of the machine owners) when the benevolent law of nature universally obeyed throughout animated life, is reversed as it regards those to whom it is the most essential. To be sure, he has ever been informed, and assured that these things were all for his advantage, especially when he has thought otherwise, and been turbulently disposed ; but he has been the truer prophet and political economist ; his labour has become less and less valuable, till he is at length pronounced, on high authority, to be redundant ; and measures are at this instant being projected to send him out of his country. Inventions which retain the pleasing appellation of ‘machines for shortening human labour,’ are to all intents and purposes, become machines for supplanting it as far as possible ; in one sense, indeed, they are appropriately named, for they have the effect of shortening life. Contrivances to dispense with this labour almost altogether are hailed as public benefits and

eagerly adopted. On this subject I shall not further express myself, but conclude with the language of an able article on political economy in the 'Edinburgh Encyclopædia:':—'All the workmen of England would be turned into the street, if the manufacturers could employ steam engines in their place at a saving of five per cent.' "

Mr Sadler entered parliament, as representative of the Borough of Newark in 1829, and had by word and vote supported Mr Hobhouse in all his parliamentary efforts in support of Factory Regulation. Mr Sadler had been for many years, a resident in the two of Leeds, had taken an active interest in the affairs of the Borough, and had been treasurer of the Board of Management of the Poor, he was practically familiar with the evils of unregulated factory labour. Among Mr Sadler's early and most intimate personal friends in Yorkshire was Mr Oastler, a close correspondence was kept up between these gentlemen on subjects of public interest, a glance at a portion of this correspondence will manifest the interest Mr Sadler felt on the factory question. The following are extracts from the letters of Mr Sadler to Mr Oastler :—

"London, September 1st, 1831.

"I need not inform you, that I not only concur with Mr Hobhouse's factory bill ; but, as I have expressed to him over and over again, I go much beyond it. Had he not taken it up this session, I should have done so, as my views and feelings are very strong upon that subject, and I have made calculations and published them in my book upon Ireland, showing the excessive mortality, &c., that the infamous and unnatural factory system occasions.

"I have been, within these few days past, urging a provision for the poor of Ireland, and was beaten by twelve only—which, even the ministers themselves, acknowledge

to be a defeat. I hope, and indeed feel sure, that you will be with me upon this point. On this day fortnight, I hope to lay before parliament, a long considered plan, for the bettering the condition of the labouring poor of this country : on which I think, also, we should agree. My greatest loss is, that I have no energetic friend like yourself, at my elbow, to prompt and encourage me in these endeavours."

"London, September 20th, 1831.

"I cannot refrain from thanking you most deeply for the kind interest you take in a subject just started in Leeds, relating to so humble an individual as myself. [This refers to Mr Oastler's suggestion, that arrangements should be begun among the factory workmen to forward Mr Sadler's election for Leeds.]

"No man living can be more conscious, how humble are his claims to any distinction of the nature contemplated; indeed, I am distressedly conscious of that fact, and am only cheered by the thought, that my earnest wish is, *to better the condition of the oppressed and degraded part of my fellow creatures, and especially those whose cause you have so generously and painfully advocated.*"

"London, September 22nd, 1831.

"I am entirely with you on all the important topics you mention—and they are the most important to the country, of any that can be mooted; and I take up not one of them from personal considerations,—for the first time, or for electioneering purposes,—a course which I am sure you would despise me, if you thought me capable of adopting. Being in some measure however 'embarked,' I must go forwards; but I do so with the deep (I must say distressing) conviction of my own weakness and unworthiness, which are not words of course with me, but which I feel deeply, and yet know that I do not feel enough.

“Accept my best thanks for your kindness, and for that energetic friendship which you, I know, are exercising in my behalf. I have very few recommendations in my favour, and those are simply, an earnest wish to better the condition of the industrious classes (who, between ourselves, have been *shamefully neglected* and in some cases *cruelly depressed*), joined with a full determination to attempt the task.

“I thank you most deeply for your concluding advice—I need it greatly. May my motives be kept single, and my conduct upright and humble! Indeed, I have more temptations arising from despondency and want of confidence, at this moment, than vanity or pride, which would ill become me; having no pretensions whatever to anything that could make me proud. The happy medium, is, what religion alone can give: I have of this, a little—may God increase it; that is His gift, and the most precious one He bestows.

“The millowners, I am aware, are very powerful in Leeds. I meditate nothing but what I think would be for *their* interest, properly understood, if carried into full effect; nothing that I would not gladly submit to, were I one of them. Adieu.

“Our objects are the same, and I hope I shall live to see some of them realized. In the meantime, allow me, in great haste, to subscribe myself, my dear Sir, your affectionate friend and fellow labourer,

“M. T. SADLER.”

“Leeds, Nov. 2, 1831.

“My dear Sir,—A succession of gentlemen have been with me this day, leaving me, till this moment, no time whatever to draw up the ———; I regret this much, but not so deeply as I should have done, had you not said you intended to be here on Friday evening, when what I shall pen will be submitted to your inspection, and so modified as to meet

your views, which, I am sure, are more enlarged than my own on the point at issue; as you are so well aware what would least alarm the millowners. I have principally attended to what it was right to propose in behalf of those employed: you have attended to both considerations.

“I shall, therefore, be entirely governed by you in this important matter. In the course of conversation with those who have been with me to-day, I find that the public are ripe for our attempt in behalf of the poor friendless factory victims. If it conduce to a satisfactory issue, the chief merit is yours—for your zeal in their behalf has not been a hatred of slavery in the abstract, but you have manfully come forward, and have unceasingly advocated the cause of the most degraded and abused class of beings existing.”

“Leeds, Nov. 20th, 1831.

“My dear Friend,—The question of factory labour never has been taken up with sufficient energy in parliament; and the law, as at present carried, is not only nothing, but actually worse than nothing: I will mention why I think that the twelve hours’ labour, assigned to young children, under a bill professedly passed for their protection, is worse than if no bill had passed; as I find, that even in the flax mills here, they NOW work little more than that time, in several instances not any more, not so much: still their health fails, and all the pernicious consequences you so much deplore ensue.

“Perhaps there may be many millowners (if left to themselves), who would NOT work so long as that; several have not, even in more barbarous times, if possible, than these, worked their children more than TEN hours,—DALE OF LANARK, for instance. But if parliament deliberately takes the thing up, and settles twelve hours, or even eleven hours, per day, labour for children, the private individual responsibility of the employers seems done away with in a great

measure: they will argue, and feel, and act under the impression that, if those who seek only to serve the children prescribe those hours, it would be worse than folly not to abide by them; deliberately considered, as they must have been. On the other hand, I am persuaded, and all I hear and read confirms me in my conviction, that TEN hours can never be receded from by those who love children, or who wish to obtain the approbation of Him who was indeed their friend and lover. I am sorry, therefore, to see that Sir John Hobhouse has not only conceded his bill, but his very views and judgment to the political economists, who in this, as in many other things, are the pests of society and the persecutors of the poor—unknowingly I hope—but whether they are so ignorantly or wilfully, makes no difference as regards their miserable victims. Their principles and schemes have led to the degradation, misery, and destruction of the working classes.

“I had rather have no bill, than one that would legalize and warrant their excessive labour.”

Mr Sadler had, during the progress of Sir John Cam Hobhouse's bill, been solicited by the Short-time Committee of Huddersfield to give to that bill his support. Mr Sadler was very energetic, and in his correspondence with the Huddersfield Short-time Committee he pointed out to them the high position they had gained through Mr Oastler's exertions, and strenuously urged them not to be contented with any measure short of a ten hours' limitation, and very freely expressed his dissatisfaction with the result of Sir John Cam Hobhouse's parliamentary exertions on behalf of the factory operatives. Sir John Cam Hobhouse considered any effort for a Ten Hours' Bill in parliament utopian. Mr Sadler ascertained from Sir John what his opinions were on the subject, and it was mutually agreed that if Mr Sadler desired further legislation, and to the extent indicated by the

Huddersfield Short-time Committee, then Mr Sadler must, himself, lead the question in the House of Commons.

The working men, and those of their employers favourable to factory regulation, by common consent selected Mr Sadler as their future leader in parliament; they found in him an able and faithful champion of their cause. He was one of the few who preferred the path of difficulty to the easy roadway of the merely partisan politician. Sadler did not follow the crowd; he exercised his mental faculties on the most abstruse and difficult questions; he strove, by the solitary force of his own intelligence, to illuminate the social and political atmosphere of his age. His genius was luminous; it penetrated the centre of the social system by the fulness of its own light, and balanced the good against the evil of every proposed or realized change. Sadler had a great object in view—the upraising of the whole labouring population; his mind was sufficiently practical to formulate measures, and possessed, in a rare degree, the faculties requisite for the just apprehension of principles. Familiar, through the aid of studious investigation, with the practical tenour of the legislation of centuries—deeply versed in the writings of the earlier English authors, from Alfred the Great to Lord Chancellor Bacon, he approved their leading principles, and was opposed to the monopoly of riches; he desired the distribution, rather than the heaping-up of the products of labour and land, and devoted his energies to that end. Sadler's soul, like that of his friend Oastler, was dead to class or party interests, as understood by the leading political writers and legislators of his time; his sympathies were on the side of the injured and oppressed. He firmly believed it to be an ordination of Providence, that the poor shall never cease out of the land; that religion, justice, and humanity concurred in enforcing the necessity and wisdom of a permanent, legal, and ample provision for their wants. In the estimation of Sadler, to labour was the law of life, and

the business of philosophers, mechanicians, and statesmen, was to discover how life's burthens should be lightened, and its enjoyments increased for *all*, in proportion as man's control over the materials of the earth increased; that the nearest approach to the *Millennium* was to be found in the elevation of the labouring portions of the community. In him a love of the truth was paramount to every other consideration—he never feared to tread wherever his principles might direct. Such a leader in parliament could not fail to give moral weight and dignity to any cause with which his heart was identified. He might not, like Brougham, defy a senate with a sneer; nor, like O'Connell, frown with contempt on an opposition; nor, like Peel, win by strategy what could not be gained by openness. Like many men of genius, Sadler was sensitive to excess, his gentle nature but ill fitted him to withstand the ridicule and buffoonery unhappily associated with political strife (and with which he, more than any other public man, was assailed). He was too candid to be crafty; more a student than a party politician; though called a Tory, he was, properly speaking, of no party—he was of the nation. His courage was the result of a union of head and heart; he was not led from without by the applause of multitudes; was invariably anxious to be true to himself. At all times controlled by conscience, whatever cause he espoused he persevered in to the end. His knowledge was comprehensive, extending from ancient rule to modern experience; he enriched the principles he advocated with a copious learning, hallowed by religious devotion, and strengthened by an undeviating faith in the supreme wisdom of God's laws, as known and practised under the Jewish theocracy. The laws of the Hebrews, relating to the poor, were the constant themes of Mr Sadler's admiration. Under the Mosaic economy, to relieve the distressed, and aid the poor, were acts of justice, not depending on the promptings of humanity, but, as understood by Mr Sadler, these deeds were

commanded by GOD, and were the indispensable conditions on which property could be owned; and that, in any state of society, the abrogation of like practices could not fail to produce the saddest possible results. The factory question was only an important step in the ladder of Sadler's social system; his pleadings were as earnest for the downcast agricultural labourer as for the depressed factory child; a circumstance which strengthened him at every step, for the mind of Sadler concentrated diversities of knowledge, and directed these to the speciality on which his intellectual force was applied. The subserviency of the factory question to Sadler's own views was a valid security for a faithful protection of the interests confided to his care. In the hands of Sadler, the cause of the factory operatives was not, as the exigencies of party required, cast into the scale of time-serving faction. Factory regulation was by him maintained as a national necessity, and sealed with the maxim—"The safety of the people is the highest law."

CHAPTER IX.

MECHANICAL, SOCIAL, AND MORAL PROGRESS.—LETTER OF SIR JOHN CAM HOBHOUSE, BART., M.P., ON THE DIFFICULTY OF FURTHER LEGISLATION.—MR OASTLER'S REPLY.—OPINIONS AND LETTER OF THE RIGHT HON. T. B. MACAULAY ON THE FACTORY QUESTION.—SPEECH OF MR SADLER ON INTRODUCING THE TEN HOURS' BILL TO THE HOUSE OF COMMONS.—APPOINTMENT OF A PARLIAMENTARY COMMITTEE.

THERE cannot be any doubt entertained of the increase of scientific, chemical, and mechanical knowledge ; during the three past ages man's control over inanimate matter has rapidly increased ; mechanics and engineers are capable of producing in a few days, what, a century ago, would have been the work of years. Scientific knowledge, and the division of labour, have multiplied the powers of production with a rapidity beyond the means of calculation. While this great fact of material progress is prominent and undeniable, the social and moral progress of the majority of English society is not by any means an undisputed question. Some among the most thoughtful of our time have doubted if all our scientific, chemical, and mechanical skill, have lightened the day's toil of any human being ; others have declared that at no period of the nation's history has it been more difficult for a labouring man to earn his bread by the sweat of his brow than in these latter days. It cannot be reasonably contended that the bitter fruit of man's first disobedience, as represented in the newly-born infant, weighs more heavily on the present than it did in past generations. "Original sin" is, in its own nature, un-

changed, yet crime increases with frightful celerity, and the statute book is swelled to inordinate size with criminal laws, some of these for crimes of the most odious kinds ; and the question is still asked, with more and more urgency, from bench and pulpit, "What can be done with our criminals ?" The progress of industrial development has increased, manifold, the means of supplying the wants of man ; universal equality may be, only, the benevolent vision of utopian dreamers ; the distribution of the products of industry may be, for the wisest of purposes, unequal ; it may be an eternal law that some shall be rich and others poor. But that state of society has not any just claim to wear the honourable distinction of civilization in name, under the rule of which, in fact, it is for the comforts of the many not to increase in something like a due proportion to the increase of man's control over the raw material of the earth, and whose moral condition is either doubtful or retrograding. There is no lack of men, and clever men too, disposed at all times to eulogise modern industrialism. There never was any want of men, in any age, to chime in with the fashionable chorus of their own time. When Moses came down from the Mount, carrying in his hand the tables of the testimony, the voices he heard were not those who shouted for mastery, or those who cried for being overcome ; they were the voices of those who were making merry, singing and dancing round the golden calf. So far as we apprehend the superiority of the present over past ages, its existence is acknowledged without reserve. To "take stock" of material progress is very desirable ; it is a proper employment for a nation proud of its business talent. The social and moral economist must study social and moral progress ; he who assumes to legislate, and fails to estimate these, is, at best, to borrow a phrase from Adam Smith, "That insidious and crafty animal, vulgarly called a statesman." All political economy that has not for its object, and fails in its practice, to increase the command of the labourers over the necessities,

conveniences, and comforts of life, is, for all the purposes of desirable civilization, a delusion. It would be difficult to conceive a more dangerous heresy than that contained in the maxim :—"A measure may be morally right and politically wrong." Whatever measure is morally right, will in practice be found politically and socially right, so far as the interests of a nation are concerned ; as for the real or supposed interests of party politicians, these are unworthy of a moment's consideration, beyond the knots of crafty tricksters who are mean enough to entertain them.

The principal exponent of the factory question, and the parliamentary leader thereof, had observed, in their own time, a considerable change for the worse in the condition of the agricultural and manufacturing population. The enclosure of commons, and their appropriation by a few landowners (without regard to the immemorial rights and usages of the peasantry, to whom, with very rare exceptions, not any "allotments" were made)—the pulling down of cottages, which followed the cry of "a redundant population," and other acts of social oppression, had, to a great extent, injured the condition and prospects of the agricultural labourers, and forced very many families from their once comfortable rural homes (the homes of their forefathers) into the manufacturing districts. The unregulated introduction and use of machinery had operated injuriously on the value of the labour of 840,000 hand-loom weavers ; small manufacturers had in most cases been reduced from comfort to penury ; the horrors of the factory system had pierced the souls of Oastler and Sadler, and made them earnest, bold, and eloquent in its denunciation. The progress of agitation in Yorkshire had been rapid and successful ; it had crossed the borders of Yorkshire into Lancashire and Cheshire. Men so impressed, and so hopeful, could not entertain doubts as regarded success ; they had resolved to gain their avowed object, and neither feared nor cared for obstacles.

In few assemblies has enthusiasm less influence than in the

British House of Commons ; in its collective capacity it is not disposed, readily, to concede any demand ; it prides itself on a kind of stoical indifference to recently-organised movements, and waits for "the pressure from without." A manifestation of this feeling the supporters of factory regulation were destined to endure. Mr Oastler had opened a correspondence with several members of both Houses of Parliament, necessarily, with various results, the general feeling of the House of Commons was very candidly expressed by a not unfriendly pen. In consequence of a statement made on the authority of Sir John Cam Hobhouse, and published in the *Leeds Mercury*, Mr Oastler wrote to him, and was answered in the following letter ; it contained the convictions of the honourable baronet, on the probable success of Mr Sadler's contemplated bill in the House of Commons. It is the judgment of a mind endowed with keen perceptions, by habit and experience ; accustomed to estimate the legislative action of the House of Commons ; undoubtedly, well versed in the state of the factory question.

"Hastings, November 16, 1831.

"Sir,—I beg to acknowledge the receipt of your letter, and of the *Leeds Intelligencer*, of Thursday, Nov. 10. Of my letter to Mr Baines I have no copy ; otherwise I would, with pleasure, send it to you—at the same time I think it right to inform you, that if the extracts published in the *Mercury* are not satisfactory, neither the whole letter, nor anything I have it in my power to say, would be found more acceptable.

"I regret very much to perceive that the discussion on the factory system is mixed up with the party politics of Yorkshire, and more especially of the town of Leeds—still more do I regret that the good operatives should have been so much deluded, either by very ignorant or designing men, as to promise themselves the accomplishment of what can never be realized. Those acquainted with the real state of

the question, so far as parliament is concerned, know very well that nothing can be more idle than to talk of the possibility of limiting the hours of daily labour to *ten* for five days, and to eight on the Saturday—and I was, and am surprised to find, by Mr Sadler's answer to the Huddersfield deputies, that the worthy member for Aldborough should appear to concur in views so extravagant, and which can only end in disappointment.

“The deputies of the operatives who attended me during the passing of the bill, and who, indeed, framed the Act, have it in their power to lay before their constituents such information as would at once convince them how groundless, and how prejudicial to their own interests, are all such expectations; and I can assure you, Sir, that the sooner the delusion is dispelled, the more likely will the reasonable wishes of the parties concerned be fulfilled. The censures which, it seems, are passed upon those concerned in the recent Act, and more especially on myself, can proceed only from those altogether unacquainted with the circumstances of the case, and from those who know nothing of the difficulty of carrying a controverted measure through parliament. It would doubtless have been very easy to have prepared a plan which would have pleased all the operatives for the moment, and have gained much applause from their inconsiderate friends, and which would have been rejected at the very first mention of the proposal in the House of Commons. But a man who has higher objects than immediate praise, would have been highly culpable in pursuing such a course, and sacrificing an attainable good for a fleeting popularity. Certainly the present Act is far from being so extensive, either in its operation or in its restrictions, as I could wish, but it was the opinion of the deputies of the operatives, that it secured many advantages, and was a decided improvement of the former legislation on the subject. I had therefore no choice left to me, except of two modes of procedure, namely, to attempt to pass my

original bill in the face of all the opposition arrayed against me, and at a time when even the very forms and delays of parliament would have defeated me ; or to secure so much of the Act as I could pass without opposition of any kind. I did so by waiting day after day for a favourable moment, and at last got through the stages of it at *half-past three in the morning!!* I will leave you to judge what would have been the result, if I had attempted to force any controverted clause upon the House, any single antagonist would have objected to the *time* of the discussion, and that obstacle alone would have been quite sufficient to postpone the question from day to day, until the end of the session.

“ My principal opponents are the Scotch flax-factors, and the West of England woollen-factors. The latter I think I might have managed to conciliate. The former gave me no hopes of a compromise, and they sent down so numerous and influential a body of members to the House against me, that resistance was hopeless; at least, as I before said, at that period of the session, and in the then state of public business. If I should be induced to make an attempt to bring back my bill to its original shape, I shall have to encounter the same difficulties, and without appointing a select committee to examine evidence, I fear that even the very introduction of the measure would be opposed with success. Should Mr Sadler make the effort which he seems to contemplate, of limiting the hours of labour to *ten*, you may depend upon it he will not be allowed to proceed a single stage with any such enactment, and, so far from producing any beneficial effects, he will only throw an air of ridicule and extravagance over the whole of this kind of legislation. I trust that, on mature reflection, that very respectable gentleman will adopt a more useful course of conduct, and in that case he may depend upon my exertions, such as they are, to second and encourage his honourable labour. You are welcome to give any publicity which you may think desirable to this communication,

and I cannot conclude without hoping that what I have thought right to impress upon your consideration may alter in some degree the opinions you have hitherto entertained as to the best mode of promoting the object which we have, I believe, mutually at heart.—I have the honour to remain, Sir,

“ Your very obedient and humble servant,

“ JOHN C. HOBHOUSE.

“ Richard Oastler, Esq.”

To this letter Mr Oastler replied as follows:—

“ To Sir John Cam Hobhouse, Bart., M.P.

“ Fixby Hall, near Huddersfield, Nov. 19th, 1831.

“ Sir,—Accept my most respectful thanks for your letter of the 16th inst., and believe me when I assure you I feel grateful to you for the exertions you have made in behalf of poor innocent and defenceless factory children; but allow me also to state, that I exceedingly regret you felt yourself obliged to yield the sacred cause of the poor to the “ cold, calculating, but mistaken Scotch philosophers,” who seem, very unfortunately, to have an overwhelming influence over the government of this country. Yes, Sir, although I cannot feel otherwise than grateful to you for what you have done, I wish you had manfully met those unfeeling misanthropes (whose God is money, and whose policy is the ruin, degradation, and banishment of the poor) by sound, philosophical and Christian argument, on the arena of the House of Commons, rather than have succumbed between the Committee and the House; then I am sure the laws of this country would never more have been disgraced by a statute *legalising* the working of poor little children nine years old, for twelve hours per day! Say what we may, this is disgusting tyranny, practised under the name of freedom, on the weakest, most innocent, and most abject slaves. In this part of the country very great anxiety is felt on the subject, and the friends of the children are exceedingly wishful *to know who are their enemies*. From the general tenour of your letter to Mr Baines (so far as he

thought proper to publish it,) we were led to believe the 'quarter' to which you were 'obliged to listen,' must have been the government; and yet Mr Baines says, 'the government are not to be charged with the defeat of the measure.' Then again Mr Baines says, 'the Board of Trade was inclined to support *you* until embarrassed by the members of the north.' And you say they (*i. e.* the Scotch members) 'were *supported* by the Board of Trade.' Mr Baines afterwards adds, 'It is to the credit of Yorkshire, that none of the opposition given to the bill proceeded from either of its members or manufacturers.' Now if you did not inform him that this was the fact, he ought not to have assumed it, and I fancy you could not have told him so, because I happen to know that petitions were sent against it by *some* of the manufacturers of Huddersfield, Halifax, and Bradford; and I think Mr Baines will not dispute that these places are in Yorkshire. Then, again, I was informed, by a most respectable and humane manufacturer, who *supported* the bill with very great zeal and perseverance, and at considerable expense, that Mr Marshall, of Leeds, opposed the bill. Now I fancy, that Mr Baines himself will admit that Leeds is in Yorkshire, and that Mr Marshall is a Yorkshire manufacturer. It was in consequence of these positive contradictions in Mr Baines's report, that I was induced to trouble you, finding that many persons were puzzled, and did not know whether Mr Baines or yourself might have made these irreconcilable statements, which you must agree with me, no rational person could comprehend. I regret exceedingly you have no copy of the letter, but I feel satisfied you could not have authorised Mr Baines to print such nonsense. I have asked Mr Baines for an explanation; he has not favoured me with one. It appears to the friends of the measure essentially necessary, that they should actually *know* their opponents, otherwise they should never know where to direct their energies. If these *men did* oppose the operatives, they have a right to be informed of it;

they would then be able to assist in sending *up* to parliament *interest* and *argument* as strong as theirs.

“That the Factories’ Bill should now be made a political electioneering question cannot be matter of *surprise*, and, I think, is not one of *regret*. We have witnessed a friend of emancipation (yourself) defeated by a certain kind of *influence*, exercised over the feelings and judgment of the representatives of the people—‘the Scotch flax-spinners’ for instance, who ‘sent *down* so numerous and influential a body of members’ to the House *against* you. It is very plain that, if the friends of the measure are not determined, when an election takes place, to send up ‘as numerous and influential a body of members’ in favour of the measure, there can be no hopes of any relief. I am not aware that the question is intended to be mixed up with *general* politics, but merely so far as to *secure* votes in its favour from the new members; and I sincerely hope that no members will be returned (where the operatives have any influence, or where the hateful factory system is known) but those who are *known* to be friendly to a TEN Hours’ Bill. I hope the workmen will have the wisdom not to be gulled by the terms whig, tory, or radical, but be *determined to support men who will support this bill*. I really think the ‘good operatives’ are quite as able to exercise a correct judgment on this question as they are on the very complicated one of ‘parliamentary reform;’ and you know the King himself and the government made that an ‘*electioneering question*.’ We are exhorted, I see, by Mr Baines, to ‘petition parliament.’ This may be very right *when we have secured good members*; but if we are to have our petitions presented to a body of representatives, governed by ‘the cold, calculating, but mistaken *Scotch* philosophers,’ then I fancy we might as well save ourselves the trouble and expense; and I think it is very plain, from the concluding part of your letter to Mr Baines (if he quotes correctly), that we have no chance of ‘conciliating’ the Scotch members with-

out a 'numerous and influential body of members,' who will be resolved to do an act of justice to our cruelly insulted and degraded infants. I hope also the landowner, the farmer, the *little* millowner, the domestic manufacturer, the little tradesman, the shopkeeper, the mechanic, and the artisan, will ALL join us in this struggle against 'Scotch philosophy;' or they may be assured, EVERY ONE OF THEM, that the system of infantile slavery is a system of UNIVERSAL PAUPERISM; nay, thousands of them have already proved this awful truth.

"I am truly sorry you despair of ever carrying a bill for 'ten hours for five days, and *eight* on the Saturday.' You have certainly had much experience how the '*influence*' is got up 'so far as parliament is concerned;' but we know that hitherto the operatives have *neglected* to use *their* influence, and *we think we are their friends when we advise them to use it*. The 'Scotch philosophers' have hitherto had ALL the influence, and the poor children have only had the support of disinterested philanthropists like yourself; and besides, *we are told* that, in a reformed parliament, the people will have a more direct influence. I think, then, the friends of the measure should rejoice that the people are *determined* to make this a political (electioneering) question.

"I hope the limits sought for by the operatives may in the end be realised; nay, in such a case I cannot doubt, till I am informed upon what principle of religion, nature, law, or policy, a child ought to be subject to two hours' *longer* work per day than a full-grown man. When I am made wise on this point, I may perhaps doubt. But *all* the 'Scotch philosophy' can never make me *fear* the success of this measure until that question be answered, and even when that point is solved, two others will arise—*viz.*, If it be beneficial? If it be magnanimous and worthy of the bravest nation in the world?

"I am not altogether ignorant of the kind of parliamentary influence which makes you doubt the *possibility* of carrying

even your original measure; and I know something of the difficulties you have to encounter, yet, I have no doubt that a *much more extensive* measure will be adopted before many years are passed; and although, at present, the idea of working infants **ONLY** ten hours a day may appear ignorant, ridiculous, extravagant, idle, delusive, and impossible to the legislators of this country, I cannot doubt that, in a very short time, our legislators will hardly believe it was *ever* possible for a Christian parliament to *refuse* such an act. I anticipate with gladness the day when yourself, Mr Sadler, and Mr Strickland (for he is *now*, I am happy to say, a **TEN** hours' man), will be exerting your mighty powers of eloquence for the liberation of the most oppressed beings under the sun. The alteration would at once prevent the *unnatural* effect of *increasing* human labour with the *increase* of machinery; it is this circumstance, proceeding not from the *nature* of machinery, but *from the avarice of man*, which makes machinery often *appear* to be a curse. The *natural* effect of machinery must be to lessen human labour; the *actual* effect, *under the present system*, is to increase it.

"I rejoice that Mr Sadler has declared himself a legislator on this subject, *in accordance with the principles of his whole life*; the declaration is founded on justice, the principles are those of truth, and *must* ultimately prevail. I am at a loss to conceive how a 'Ten Hours' a Day Bill can be 'prejudicial to the operatives,' or how such a desire can be called 'extravagant and unreasonable.' If this measure is 'rejected at the very mention of the proposition in the House of Commons,' none will regret it more than myself; but that unfortunate circumstance would not dishearten its friends. It would only spur them on to greater exertions, *and would undoubtedly lead to certain success*. 'Immediate praise' and 'fleeting popularity' are, indeed, unworthy motives, and particularly in a legislator. So far as I have experienced, they are the *last things* a man will be troubled

with, *if he pursue a straightforward course, and act upon principle.*

“Your ‘Cotton Act’ is, I believe, an improvement, and I thank you for it; but I do wish you had debated the question in the House. I think, with Mr Strickland, that it would have been better ‘that the abandonment of the bill should have been caused by an open division.’

“I must apologise for the freedom and length of this epistle, and cannot conclude without thanking you most sincerely for your kind attention to my letter, and assuring you that I feel unfeignedly grateful for the exertions you have already made, and still hope that you will, on full consideration, support the principle of limiting the labour of your children to *ten hours* a day, that being as much as they can or ought to endure. As you say that I may give any publicity I may think advisable to your communication, I shall give it, along with mine, to the editors of the newspapers. I feel there ought to be no secrets on the subject.

“I have the honour to remain, Sir,

“Your most obedient, humble servant,

“RICHARD OASTLER.”

Mr Sadler, encouraged by the favourable and enthusiastic feeling in Yorkshire, and neighbouring counties of Lancashire and Cheshire, introduced his projected Ten Hours’ Bill to the House of Commons early in 1831. He was energetically supported by his friends not in parliament, and strengthened by numerous petitions. Notwithstanding the efforts of a very powerful opposition, the feeling in favour of factory interference was decidedly on the increase. The readers of *Reviews* will recal the “Let all things alone” doctrine which pervaded the essays in the *Edinburgh*, among these the brilliant critical productions from the pen of Mr T. B. Macaulay. By way of example, take Macaulay’s review of *Southey’s Colloquies on Society*; it contains the following

paragraph:—"As to the effect of the manufacturing system on the bodily health, we must beg leave to estimate it by a standard far too low and vulgar for a mind so imaginative as that of Mr Southey, the proportion of births and deaths. We know that, during the growth of this atrocious system, this new misery, to use the phrases of Mr Southey, this new enormity, this birth of a portentous age, this pest which no man can approve whose heart is not scared or whose understanding has not been darkened, there has been a great diminution of mortality, and that this diminution has been greater in the manufacturing towns than anywhere else. The mortality still is, as it always was, greater in towns than in the country. But the difference has diminished in an extraordinary degree. There is the best reason to believe that the annual mortality of Manchester, about the middle of the last century, was one in twenty-eight. It is now reckoned at one in forty-five. In Glasgow and Leeds, a similar improvement has taken place. Nay, the rate of mortality in those three great capitals of the manufacturing districts, is now considerably less than it was fifty years ago, over England and Wales, taken together, open country and all. We might, with some plausibility, maintain that the people live longer because they are better fed, better lodged, better clothed, and better attended in sickness, and that these improvements are owing to that increase of national wealth which the manufacturing system has produced." In the same essay, Mr Macaulay condemned the "intermeddling" of government, and expressed his opinions on the duties of rulers in very decided words:—"It is not," wrote the *Edinburgh Reviewer*, in 1830, "by the intermeddling of Mr Southey's idol, the omniscient and omnipotent state, but by the prudence and energy of the people, that England has hitherto been carried forward in civilization ; and it is to the same prudence and the same energy that we now look with comfort and good hope. Our rulers will best promote the

improvement of the nation by strictly confining themselves to their own legitimate duties, by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment, by maintaining peace, by defending property, by diminishing the price of law, and by observing strict economy in every department of the state. Let the government do this ; the people will assuredly do the rest." It would be irrational to suppose that any man of Mr Macaulay's standing, as a gentleman and an author, so thoroughly convinced of the advantages associated with our modern manufacturing system, so decided and emphatic against "intermeddling," and so assured of the advantages arising "by leaving capital to find its most lucrative course," could have conceived the necessity for interference by law in the regulation of factories. The proposition requires no defence, for had Mr Macaulay been correct in his statements, not any interference could have been advantageous. The mind of Mr Macaulay had evidently undergone a considerable change between the years 1830 and 1832, as the subjoined letter, addressed to Mr Ralph Taylor, Secretary of the Leeds Short-time Committee, will prove:—

" London, March 16th, 1832.

" Sir,—I am decidedly favourable to the principle of Mr Sadler's bill. That is to say, I think that the hours of labour of children ought to be regulated. But I see, I confess, some strong objections to the machinery by which Mr Sadler proposes to effect this object ; and I know that some of the most zealous and intelligent friends of the working classes, both in and out of parliament, agree with me in thinking, that if the bill now before us should pass into a law without great modifications, its effect would be most seriously to injure the labourers of our manufacturing districts. There is a strong and general feeling in the House of Commons, that something ought to be speedily done for the protection of the children.

There is also, I think, a general feeling that the details of Mr Sadler's bill have not been well considered. The government will, I believe, take the question up: and I hope and trust, that before the end of this session, we shall have a law which will accomplish your object in an unexceptionable manner. Permit me to add one word on the subject of the Order in Council, which has been sent to St Lucie. That Order, as you justly say, has provided that a slave shall be forced to work only nine hours a day, and only five days a week. But you forget, I think, that the slave has to find his own subsistence besides. The time which is secured to him is not holiday time. He must cultivate his own provision-ground during the hours when he is absent from his master's sugar plantation. The labour of the slave which the Order in Council limits, is a forced labour, and an unpaid labour. He may work eighteen hours a day voluntarily, and for hire if he pleases. The Order does not in the least restrict him from performing any quantity of work which it may be his own pleasure to perform. There is, therefore, not the slightest analogy between the case of a freeman of mature years. The law ought to limit the hours of forced labour of the slave:—and why? Because he is a slave. Because he has no power to help himself. But the freeman cannot be forced to work to the ruin of his health. If he works over hours, it is because it is his own choice to do so. The law ought not to protect him; for he can protect himself.

“The case of a child bears a nearer analogy to the case of a slave. The child may have cruel parents, or may be in the power of those who are not his parents. It is therefore just and reasonable, that the law should extend to the child a protection similar to that which it extends to the slave. But the reason for this protection ceases as soon as the child becomes his own master, and is capable of contracting on his own behalf. The Order in Council to which you refer, limits the hours during which free negroes are to work. And in the

same manner I would limit the hours of labour for a child of thirteen or fourteen. But why the hours of labour of a youth in his twentieth year should be limited, as proposed by Mr Sadler's bill, I cannot understand.

"I earnestly hope that we may be able to come to a speedy and satisfactory adjustment of this question.

"I have the honour to be, Sir,

"Your most obedient servant,

"T. B. MACAULAY."

Mr Macaulay's letter is evidence of a change in his mind; though distinctions are carefully made between slaves and freemen, adults and children; yet the question presses for an answer, What was the physical and moral condition of those, designated adult free men and women, resident in the factory districts, who habitually allowed their children to work under conditions which called for interference by the state? The answer is necessarily the converse of Mr Macaulay's eulogium of the manufacturing system, as expressed in 1830. The judgment of the statesman of 1832, was ripened by increased knowledge, beyond that of the *Reviewer* of 1830. While standing fast by the rule of 1830, the force of evidence, and a growing public opinion, had caused a recognition of an opposing principle, as regarded children employed in factory labour.

Mr Macaulay's letter of March, 1832, was, to the supporters of factory legislation, more encouraging and hopeful than the letter of Sir John Cam Hobhouse, to Mr Oastler, on the same subject, in November, 1831. Mr Macaulay's sources of information were excellent; the progress of the question, among those in high quarters, in and out of office, was owing to increased knowledge, and the untiring and energetic labours of its supporters in the country, and in London.

On December the 15th, 1831, Mr Sadler obtained leave to bring into parliament a bill "for regulating the labour of

children and young persons in the mills and factories of this country." Mr Sadler consequently framed his bill, had it printed and circulated among the members of the House of Commons, and moved its second reading, on the 16th of March, 1832. As a valuable contribution to the historical and social literature of the country, Mr Sadler's speech on that occasion deserves to take high rank; as an exposition of the wrongs endured by the operatives engaged in factory labour, and an answer to the opponents of his measure, it has not been surpassed; its worth is permanent, its contents eminently deserve the close study of those who feel an interest in the improvement of the labouring portions of the commonwealth. Mr Sadler said:—

"Sir,—In rising to move the second reading of the bill, which I have had the honour of introducing into parliament, for regulating the labour of children and young persons, not being free agents, employed in the mills and factories of the country, of whatever description, I shall, as far as is consistent with the high importance of the subject, and the great and general interest which it has excited throughout the entire community, compress the arguments and facts upon which I found the necessity of this measure; and I shall not misapply many moments of the time which I must still occupy by allusions personal to myself, however much I may have been provoked to such a course. I will merely say, that in bringing forward this measure, I make no pretensions to a degree of humanity beyond that which I share with the people at large; still less am I influenced by any views adverse to the prosperity and extension of our manufactures and commerce: least of all can I be governed by feelings otherwise than cordial to those embarked in these great concerns. On the contrary, in pursuing this course, I am acting under the impression, at least, that the measure which I propose will advance the true and permanent interests of the manufacturers, the cordial encouragement and support of many of the most humane and

best-informed of whom I regard as the strongest proof of the necessity of the measure, and the surest presage of its success. As to the imputation cast upon me by others of a different description, who wish to defeat this attempt, as they have hitherto done preceding ones of a like nature, not only by thwarting the designs, but by maligning the motives, of those who make them ; and who, therefore, accuse me of being instigated by a mean desire of popularity, in now undertaking a cause which, nevertheless, some of them know well enough, I advocated as strongly long before I was in parliament, as I can do on the present occasion : I say, as to this imputation, I should have passed it over in silence, only that it affords me an opportunity, which I will not neglect, of proving, even from the mouths of its opponents, that the measure is popular—popular in the fullest and best sense of the term,—and the House, I think, has seen, from the petitions which have already loaded its table, signed by magistrates, clergy, and professional men, as well as by immense numbers of the operative classes, that its popularity is founded upon the principles, the intellect, and the feelings of the British community, and that those who resist it must reckon on contempt and indignation.

“The bill which I now implore the House to sanction with its authority, has for its object the liberation of children and other young persons employed in the mills and factories of the United Kingdom, from that over-exertion and long confinement, which common sense, as well as experience, has shown to be utterly inconsistent with the improvement of their minds, the preservation of their morals, and the maintenance of their health ;—in a word, to rescue them from a state of suffering and degradation, which it is conceived the children of the industrious classes in hardly any other country have ever endured.

“I am aware that some gentlemen profess, upon principle, a great reluctance to legislate upon these matters, holding such

interference to be an evil. So, I reply, is all legislation,—upon whatever subject,—and an evil only to be tolerated for the purpose of preventing some greater one ; I shall therefore content myself with meeting this objection, common as it is, by simply challenging those who urge it to show us a case which has stronger claims for the interposition of the law, whether we regard the nature of the evil to be abated, as affecting the individuals, society at large, and posterity ; or the utter helplessness of those on whose behalf we are called on to interfere ; or, lastly, the fact—which experience has left no longer in doubt, that, if the law does not, there is no other power that can or will adequately protect them.

“ But, I apprehend, the strongest objections that will be offered on this occasion, will be grounded upon the pretence that the very principle of the bill is an improper interference between the employer and the employed, and an attempt to regulate by law the market of labour. Were that market supplied by free agents, properly so denominated, I should fully participate in these objections. Theoretically, indeed, such is the case, but practically I fear the fact is far otherwise, even regarding those who are of mature age ; and the boasted freedom of our labourers in many pursuits will, on a just view of their condition, be found little more than a name. Those who argue the question upon mere abstract principles seem, in my apprehension, too much to forget the condition of society : the unequal division of property, or rather its total monopoly by the few, leaving the many nothing but what they can obtain by their daily labour ; which very labour cannot become available for the purposes of daily subsistence, without the consent of those who own the property of the community,—all the materials, elements, call them what you please, on which labour can be bestowed, being in their possession. Hence it is clear that, excepting in a state of things where the demand for labour fully equals the supply

(which it would be absurdly false to say exists in this country), the employer and the employed do not meet on equal terms in the market of labour; on the contrary, the latter, whatever be his age, and call him as free as you please, is often almost entirely at the mercy of the former;—he would be wholly so were it not for the operation of the poor-laws, which are a palpable interference with the market of labour, and condemned as such by their opponents. Hence is it that labour is so imperfectly distributed, and so inadequately remunerated; that one part of the population is over-worked, while another is wholly without employment; evils which operate reciprocally upon each other, till a community which might afford a sufficiency of moderate employment for all, exhibits at one and the same time part of its members reduced to the condition of slaves by over-exertion, and another part to that of paupers by involuntary idleness. In a word, wealth, still more than knowledge, is power; and power, liable to abuse wherever vested, is least of all free from tyrannical exercise, when it owes its existence to a sordid source. Hence have all laws, human or divine, attempted to protect the labourer from the injustice and cruelty which are too often practised upon him. Our statute-book contains many proofs of this, and especially in its provision for the poor. The Anti-Truck Bill of last year is an instance of this benevolent kind of interposition; and that sacred institution which has been adopted and legally enforced, as far as the limits of civilization extend, and which justifies its claim to divine origin by its humanity and mercy—the institution of the Sabbath—is a constantly-recurring example of interference between the employer and the employed, solely and avowedly in favour of the latter: and I cannot help regretting, that almost every other red-letter day has been long ago blotted out from the dark calendar of labouring poverty, whose holidays are now too ‘few and far between’ to cheer the spirits or recruit the health of our industrious

population. It was promised, indeed, and might have been expected, that the great inventions of recent times would have restored a few of these ;—would have somewhat abridged human labour in its duration, and abated its intensity : and it is only by effecting this that machinery can justify its very definition, as consisting of inventions to shorten human labour. I look forward to the period when machinery will fully vindicate its pretensions, and surpass, in its beneficial effects, all that its most sanguine advocates have anticipated : when those inventions, whether so complicate and minute as almost to supplant the human hand, or so stupendous as to tame the very elements, and yoke them to the triumphal car of human industry, shall outstrip our boldest expectations, not so much, indeed, by still further augmenting the superfluities of the rich, as by increasing the comforts and diminishing the labour of the poor ; thereby restoring to the mass of our fellow-beings those physical enjoyments, that degree of leisure, those means of moral and mental improvement, which alone can advance them to that state of happiness and dignity to which, I trust, it is their destiny to attain. Hitherto, however, I repeat, the effect has been far different. The condition of the operative manufacturers has been rendered more and more dependent and precarious : their labour, when employed, is in many cases so increased as to be utterly irreconcilable with the preservation of health or even life ; infancy itself is forced into the market of labour, where it becomes the unresisting victim of cruelty and oppression ; while, as might be expected from such an unnatural state of things, the remuneration for this increasing and excessive toil is regularly diminishing, till at length multitudes among us are reduced, in their physical condition at least, below the level of the slave or the brute. In proof that this is no singular or overcharged view of the present effect, or at all events of the ultimate consequences, of this dreadful system, I shall appeal to the

language of a benevolent and enlightened individual, formerly a member of this House, and an ornament to it and the country—I mean the late Sir Robert Peel. His deliberate judgment upon this important subject is thus recorded in a document which he delivered to the committee on the bill he introduced in 1816 :—

“ ‘Such indiscriminate and unlimited employment of the poor, consisting of a great proportion of the inhabitants of the trading districts, will be attended with effects to the rising generation so serious and alarming, that I cannot contemplate them without dismay ; and thus that great effort of British ingenuity, whereby the machinery of our manufacturers has been brought to such perfection, instead of being a blessing, will be converted into its bitterest curse.’

“Neither in quoting this passage, nor in making the observations which introduced it, would I be understood to recommend any interference with the efforts of human ingenuity, or with the market of labour, as supplied by free agents. But in showing how far even adults are from being free agents, in the proper meaning of the term, and, on the contrary, how dependent for their employment, and consequently their daily bread, upon the will of others, I have prepared the way for the conclusion, that children, at all events, are not to be regarded as free labourers ; and that it is the duty of this House to protect them from that system of cruelty and oppression to which I shall presently advert. The common-place objection, that the parents are free agents, and that the children therefore ought to be regarded as such, I apprehend has but little force. It is, however, so often and so confidently urged, that I shall be excused for giving it some attention.

“The parents who surrender their children to this infantile slavery may be separated into two classes. The first, and I trust by far the most numerous one, consists of those who are obliged, by extreme indigence, so to act, but who do it

with great reluctance and bitter regret; themselves perhaps out of employment, or working at very low wages, and their families in a state of great destitution. What can they do? The overseer, as is in evidence, refuses relief if they have children capable of working in factories whom they object to send thither. They choose, therefore, what they probably deem the lesser evil, and reluctantly resign their offspring to the captivity and pollution of the mill: they rouse them in the winter morning, which, as a poor father says before the Lords' Committee, they 'feel very sorry' to do;—they receive them fatigued and exhausted, many a weary hour after the day has closed;—they see them droop and sicken, and in many cases become cripples and die, before they reach their prime: and they do all this because they must otherwise suffer unrelieved, and starve, like Ugolino, amidst their starving children. It is mockery to contend that these parents have a choice; that they can dictate to, or even parley with, the employer as to the number of hours their child shall be worked, or the treatment it shall be subject to in his mill; and it is an insult to the parental heart to say that they resign it voluntary;—no, 'Their poverty, and not their will, consents.'—Consents, indeed! but often with tears, as Dr Ashton, a physician familiar with the whole system, informed the committee, a noble member of which, indeed, observed to one of the poor parents then examined, who was speaking of the successive fate of several of his children, whom he had been obliged to send to the factory—'You can hardly speak of them without crying?' The answer was 'No!' and few, I should suppose, refrain from sympathising with him, who heard his simple but melancholy story. Free agents! To suppose that parents are free agents while dooming their own flesh and blood to this fate, is to believe them monsters.

"But, Sir, there are such monsters: unknown indeed in the brute creation, they belong to our own kind, and are

found in our own country ; and they are generated by the very system which I am attacking. They have been long known, and often described, as constituting the remaining class of parents to which I have adverted. Dead to the instincts of nature, and reversing the order of society, instead of providing for their offspring, they make their offspring provide for them : not only for their necessities, but for their intemperance and profligacy. They purchase idleness by the sweat of their infants, the price of whose happiness, health, and existence, they spend in the haunts of dissipation and vice. Thus, at the very same hour of night that the father is at his guilty orgies, the child is panting at the factory. Such wretches count upon their children as upon their cattle ; —nay, to so disgusting a state of degradation does the system lead, that they make the certainty of having offspring the indispensable condition of marriage, that they may breed a generation of slaves. These, then, are some of the free agents, without the *storgè* of the beast, or the feelings of the man, to whom the advocates of the present system assure us we ought to entrust the labouring of little children. One of these ‘free agents,’ a witness against Sir Robert Peel’s bill, confessed that he had pushed his own child down and broken her arm, because she did not do as he thought proper, while in the mill. The Lords’ Committee refused to hear him another word. And shall we listen to those who urge us to commit little children to such guardianship ? We have heard, in a late memorable case, a *dictum*, uncontradicted I believe in any quarter, stating that, by the constitution of England, the first law officer of the crown, representing the sovereign, is the guardian of all children, of whatever rank, improperly treated by their parents ; but that that court is limited in its interference by the circumstance of there being property under its control. Will it be contended, then, that in these extreme cases of cruelty and oppression (for such I shall call them), where protection is

far more imperatively demanded, that poverty should be a bar against the course of British justice? If so, let us boast no longer of the impartiality of our laws! Why, if in a solitary instance a parent were to confine his child, or a master his apprentice, in a heated room, and knowingly keep him at his labour more hours than nature could sustain, and at length the victim were to die under the tyrannous oppression, and a coroner's inquest were to return a true and just verdict upon the occasion, what would be the result? And are the multiplication of such gradual murders, and the effrontery with which they are perpetrated, to become their expiation? If not, it is high time that the legislature should interfere and rescue from the conspiracy of such fathers and such masters, instigated by kindred feelings, these innocent victims of cruelty and oppression.

“There are other descriptions of children, also, whom I should be glad to know how the objectors to whom I am alluding, make out to be free agents. I mean, first, poor orphan children—a class which the system is a very efficient instrument in multiplying: very few adult spinners, as it is often alleged, and as I shall prove, surviving forty; in many instances, therefore, leaving their children fatherless at a very early period of life: indeed, so numerous are these, that a physician, examined on the occasion to which I have so often alluded, was painfully struck with the proportion. Are these orphans free agents?—Again, there is in all manufacturing towns, a great number of illegitimate children, and these also are very much increased by the system in question. I am aware that a celebrated authority has said, these are, ‘comparatively speaking, of no value to society;—others would supply their place,’—yet still I cannot but regard these as objects of the deepest compassion. To this list of free agents I might also add the little children who are still apprenticed out in considerable numbers, often I fear by the too ready sanction of the magistrates—whose hard, and sometimes fatal,

treatment has been the subject of many recent communications which I have received from individuals of the highest credit and respectability. But, as the objectors to legislative protection for the factory children can make it out to be unnecessary, because their parents are 'free agents' for them, when they have any surviving, so also it is quite as clear, probably, in their apprehension, that the parish officer is as good a free agent for the poor orphan, the illegitimate, or the friendless little apprentice, who may be under his special protection.

"But I will proceed no further with these objections. The idea of treating children, and especially the children of the poor—and, above all, the children of the poor imprisoned in factories—as free agents, is too absurd to justify the attention I have already paid to it. The protection of poor children and young persons from those hardships and cruelties to which their age and condition have always rendered them peculiarly liable, has ever been held one of the first and most important duties of every Christian legislature. Our own has not been unmindful in this respect; and it is mainly owing to the change of circumstances that many of its humane provisions have been rendered inoperative, and that the present measure has become the more necessary. I had meant to take a short review of these various efforts down to the time of the benevolent Hanway; but, interesting as the subject is, and applicable to the present discussion, I must forbear, in respect to the time it would occupy, to do so. It was the introduction of Sir Richard Arkwright's invention that revolutionised the entire system of our national industry. Previously to that period, the incipient manufactures of the country were carried on in the villages and around the domestic hearth: that invention transferred them principally to the great towns, and almost confined them to what are now called factories. Thus, children became the principal operatives; and they no longer performed their tasks, as before,

under the parental eye, and had them affectionately and considerably apportioned, according to their health and capacities, but one universal rule of labour was prescribed to all ages, to both sexes, and to every state and constitution. Such a regulation, therefore, it might have been expected, would have been adapted to the different degrees of physical strength in the young, the delicate, and especially the female sex. But no!—I speak it with shame, with horror—it was stretched, in many cases—I had almost said in nearly all—beyond what the most athletic and robust of our own sex, in the prime and vigour of life, can with impunity sustain;—to the ultimate destruction, in a vast majority of instances, of the health, the happiness, and the very life, of the miserable victims. Our ancestors could not have supposed it possible—posterity will not believe it true—it will be placed among the historic doubts of some future antiquary—that a generation of Englishmen could exist, or had existed, that would labour lisping infancy, of a few summers old, regardless alike of its smiles or tears, and unmoved by its unresisting weakness, eleven, twelve, thirteen, fourteen, sixteen hours a day, and through the weary night also, till, in the dewy morn of existence, the bud of youth faded, and fell ere it was unfolded. ‘Oh, cursed lust of gold!’ Oh, the guilt which England was contracting in the kindling eye of Heaven, when nothing but exultations were heard about the perfection of her machinery, the march of her manufactures, and the rapid increase of her wealth and prosperity!

“Early, however, in this century, the late Sir Robert Peel, knowing well the enormities of the factory system, and finding, from his own experience, that nothing but a legislative enactment could remove them, obtained the first Act for the protection of poor children employed in cotton factories. About fifteen or sixteen years afterwards, he carried another measure, of a similar, but more comprehensive nature. Lastly, the right honourable member for Westminster obtained

another Act, last session, having the same benevolent object in view. But, on all these occasions, the attempt, by whomsoever made, or whatever was its character, was met with the same strenuous, or, as I might well call it, vehement opposition. Whether it was proposed to limit the labour of infants and young persons, beside the time necessary for their meals and refreshment, to ten, eleven, or even twelve hours a-day, it was all one; the proposal was scouted and resisted. The motives and conduct of those engaged in attempting to obtain this protection, were maligned. The universal humanity of all those in every pursuit, whose power over these children was unrestrained, was boldly asserted; the superior health, happiness, and even longevity, of those employed were always maintained. Whatever was the nature or duration of the employment which these young persons, whether daily or nightly, pursued, it was contended that no injury, but abundance of good, was done to them. On every occasion this opposition has virtually succeeded, so as to defeat the original intentions of those who have successively proposed these measures. It has succeeded in lengthening the term of infantile labour, in limiting every act to one particular branch of business, in introducing provisions which have rendered them liable to constant evasions, and it is well known that the whole of them are evaded, and rendered little better than a dead letter.

“The very same opposition that has so long and so often triumphed over justice and humanity, is again organized, and actively at work, and will proceed as before. Every branch of manufacture proposed to be regulated claims in turn to be excepted; a committee of inquiry is again demanded, and, I fear, in order to postpone, if not finally to defeat, the present measure. The nature of the evidence that will be brought forward is perfectly familiar to those acquainted at all with the subject. Certificates and declarations will be obtained in abundance, from divines and doctors, as to the morality and

health which the present system promotes and secures. I cannot refrain from giving a sample of what may be expected in this line, and I think it will prepare us for, and arm us against, whatever may be advanced in favour of so unnatural and oppressive a system. I mean not to impeach the intentional veracity or the learning of the witnesses who appeared in its favour, and whose evidence cuts a very conspicuous figure in these ponderous reports; it furnishes, however, another proof of the strange things that may be, perhaps conscientiously believed and asserted when the mind or conduct is under a particular bias. They have said that the children who were worked without any regulation, and consequently according to their employers' sole will and pleasure, were not only equally, but more healthy, and better instructed than those not so occupied; that night-labour was in no way prejudicial, but actually preferred; that the artificial heat of the rooms was really advantageous, and quite pleasant; and that nothing could equal the reluctance of the children to have it abated. That so far from being fatigued with, for example, twelve hours' labour, the children performed even the last hour's work with greater interest and spirit than any of the rest. What a pity the term was not lengthened! in a few more hours they would have been worked into a perfect ecstasy of delight. We had been indeed informed that the women and children often cried with fatigue, but their tears were doubtless tears of rapture. A doctor is produced, who will not pronounce, without examination, to what extent this luxury of excessive labour might be carried without being prejudicial. I must quote a few of his answers to certain queries. 'Should you not think (he is asked) that, generally speaking, a child eight years old standing twelve hours in the day would be injurious?' The doctor reverses, perhaps by mistake, the figures, but his answer concludes,—'I believe it is not.' 'Supposing (it was again demanded) I were to ask you

whether you thought it injurious to a child to be kept standing three-and-twenty hours out of the four-and-twenty, should you not think it must be necessarily injurious to the health ; without any fact to rest upon, as a simple proposition put to a gentleman of the medical profession ?' ' Before I answer that question,' the doctor replies, ' I should wish to have an examination, to see how the case stood ; and if there were such an extravagant thing to take place, and it should appear that the person was not injured by having stood three-and-twenty hours, I should then say it was not inconsistent with the health of the person so employed.' ' As you doubted,' said a noble Lord, ' whether a child could work for twenty-three hours, without suffering, would you extend your doubts to twenty-four hours ?'—' That was put to me as an extreme case,' says the doctor : ' my answer only went to this effect, that it was not in my power to assign any limits.' This same authority will not take upon himself to say whether it would be injurious to a child to be kept working during the time it gets its meals. Another medical gentleman is ' totally unable to give an answer' whether ' children from six to twelve years of age, being employed from thirteen to fifteen hours in a cotton factory, in an erect position, and in a temperature of about eighty degrees, is consistent with safety to their constitution.' Another boldly asserts that he does not see it necessary that young persons should have any recreation or amusement ; nor that the constant inspiration of particles of cotton is at all injurious to the lungs. Reports of the state of particular mills are also given on medical authority, but the reporters seem to have totally forgotten that they had examined a body of persons constantly recruited, from which the severely sick, and those ' who had retired to die,' were necessarily absent ; and not to have suspected that many of these mills were also previously and carefully prepared for such inspection. Still, I observe, it is allowed that ' many of them (the children)

were pale, and apparently of a delicate complexion;’ but ‘without any decided symptoms of disease.’ What did that paleness and delicacy, in the rosy morning of life, indicate? Why, that disease, though not decided as to its symptoms, was fastening, with mortal grasp, upon its victims; that already early labour and confinement had, ‘like a worm i’ the bud, fed on their damask cheek;’ that the murderous system was then about its secret, but certain and deadly, work. In corroboration, however, of all that these learned persons have advanced, and in full proof of the excellency of the entire system, bills of mortality of certain places and works were adduced, in some of which it was made to appear that, in a mean number of 888 persons employed, the annual mortality had, during eight years, averaged $3\frac{87.5}{1000}$, or 1 in 229 only! This sort of evidence suggests many ludicrous ideas, which, however, I shall suppress as unsuitable to the subject: it will, doubtless, be again adduced in great abundance before another select committee. Physicians, divines, and others, will be still found to testify to the same effect. But I will take the liberty of showing, before I sit down, the true value of all such certificates. The Parliament, indeed, did not much regard these champions of the factory-system on a former occasion; and, after what I shall advance, I hope the House will not trouble them again.

“I shall now proceed to show the necessity of a general measure for regulating the labour of children and young persons employed in mills and factories, of whatever description, the protective acts already obtained having been confined in their operation to one branch of manufacture only, and in that almost entirely defeated as to their original intention and design.

“I need not inform the House that the great invention of Sir Richard Arkwright, originally used for the spinning of cotton, has at length been applied, with the necessary adaptations, to a similar process in almost all our manufactures.

Now the fact that parliament has several times, notwithstanding the severest opposition, seen it necessary to regulate the labour of children in the former pursuit, proves the same necessity to exist regarding those other factories, now so numerous, which have been hitherto entirely exempted from all such control. It would be the grossest injustice, as well as insult, to argue that those engaged in the cotton-trade were one whit less humane and considerate, and consequently required legislative interference one whit more, than those engaged in spinning any other material; and if it be contended that the labour of the latter is, in many cases, either less unhealthy or less immoderate than that of the former, I meet the assertion with a direct negative. Nor, in contending for the necessity of this measure, do I implicate the conduct of the millowners generally, many of whom, I am well convinced, are among the most humane and considerate of employers; on the contrary, the interests of these, as well as the welfare of the children, equally demand legislative protection.

“And, first, in reference to one description of spinners, from some of whom I am now meeting with opposition of every kind,—I mean the spinners of flax,—I would seriously ask any gentleman, who has himself gone through a modern flax-mill, whether he can entertain the slightest doubt that the occupation, as now pursued, must, in too many cases, be injurious to health and destructive of life. In many departments of these mills, the dust is great, and known to be highly injurious. In those in which fine spinning has been introduced, the air has to be heated, as in some of the cotton mills; the flax has also, in one of the processes, to be passed through water heated to a high temperature, into which the children have constantly to plunge their arms, while the steam and the spray from the bobbins wet their clothes, especially about their middle, till the water might be wrung from them, in which condition they have during the winter months, to pass nightly

into the inclement air, and to shiver and freeze on their return home. In the heckling-rooms, in which children are now principally employed, the dust is excessive. The rooms are generally low, lighted by gas, and sometimes heated by steam; altogether exhibiting a state of human suffering, the effects of which I will not trust myself to describe, but appeal to higher authority.

“I hold in my hand a treatise by a medical gentleman of great intelligence, Mr Thackrah, of Leeds, who, in his work, ‘On the Effects of Arts and Trades on Health and Longevity,’ thus speaks of this pursuit—‘A large proportion of men in this department die young. We find, indeed, comparatively speaking, few old persons in any of the departments of the flax-mills.’—‘On inquiry at one of the largest establishments in this neighbourhood, we found that of 1,079 persons employed, there are only nine who had attained the age of fifty; and besides these, only twenty-two who have reached forty.’

“It may, perhaps, be here remarked, that this factory-census does not indicate the rate of mortality, but merely shows that few adults are required in these establishments. If so, then another enormous abuse comes into view; namely, that this unregulated system over-labours the child, and deserts the adult; thus reversing the natural period of toil, and leaving numbers without employment, or the knowledge how to pursue it, if they could obtain any, just at the period when the active exertions of life ought to commence. Why, this is to realize, in regard of these victims of premature labour, the fate of the poor little chimney-sweeper, whose lot, once commiserated so deeply, is now, I think, too much forgotten, and whose principal hardship is not that he is of a degraded class, but that when he has learnt his business, he has outgrown it, and is turned upon society too late to learn any other occupation, and has, therefore, to seek an employment for which he is unqualified. So far, then, this unre-

stricted factory system perpetrates the deepest injury, not only upon individuals, but upon society at large.

“ But to return to Mr Thackrah. He says, that ‘a visitor cannot remain many minutes in certain rooms without being sensibly affected in his respiration.’ Also, that ‘a suffocating sensation is often produced by the tubes which convey steam for heating the rooms.’ He examined, by the stethoscope, several individuals so employed, and found, in all of them, ‘the lungs or air-tube considerably diseased.’ He adds, that ‘the coughs of the persons waiting to be examined, were so troublesome as continually to interrupt and confuse the exploration by that instrument’ He says, ‘that though the wages for this labour are by no means great, still the time of labour in the flax-mills is excessive. The people are now (November 1830) working from half-past six in the morning till eight at night, and are allowed only an interval of forty minutes in all that time. Thus human beings are kept in an atmosphere of flax-dust nearly thirteen hours in the day, and this not one but six days in the week.’ ‘No man of humanity,’ he observes, ‘can reflect, without distress, on the state of thousands of children,—roused from their beds at an early hour, hurried to the mills, and kept there, with an interval of only forty minutes, till a late hour of night—kept, moreover, in an atmosphere loaded with noxious dust.’ ‘Health,’ he exclaims, ‘cleanliness, mental improvement—how are they regarded? Recreation is out of the question. There is scarcely time for meals. The very period of sleep, so necessary to the young, is too often abridged. Nay, children are sometimes worked even in the night! Human beings thus decay before they arrive at the term of maturity.’ He observes elsewhere, ‘that this system has grown up by a series of encroachments upon the poor children; that the benevolent masters are not able to rectify these abuses. A legislative enactment is, alone, the remedy for this as well as the other great opprobrium of our

manufactures—the improper employment of children.’ Such are the opinions of this medical gentleman upon this subject, written long before the present bill was before the House; and founded upon daily observation and experience.

“I might add the opinion of another very excellent practitioner of the same place, Mr Smith, respecting the cruelty of the present system, and the misery and decrepitude which it inflicts upon its victims; but his opinions, given with great force and ability, have, I think, been already widely disseminated by means of the press. The other surgeons of the Leeds infirmary—all men of great professional eminence—entertain, I believe, precisely similar opinions. One of them, Mr Hey, a name that at once commands the highest respect in every medical society of this country, or indeed of Europe, presided, as mayor of Leeds, at an immensely numerous meeting of the inhabitants of that borough, when a petition from that place, in favour of the bill, was unanimously agreed to; and afterwards received the signatures of between 18,000 and 20,000 persons.

“In silk and worsted mills, and especially in the former, the nature of the employment may be less prejudicial in itself; but then its duration is often more protracted, and it falls in a larger proportion upon females and young children. In many spun-silk mills, in which a different operation from that of silk-throwing—and one conducted upon Arkwright’s principle—is carried on, the practice of working children at a very tender age, and often all night, prevails. In some of these, I am informed, they commence at one o’clock on the Monday morning, and leave off at eleven on Saturday night; thus delicately avoiding the Sabbath, indeed, but rendering its profitable observance, either for improvement, instruction, or worship, an utter impossibility.

“In the worsted mills, the greatest irregularities, as to the hours of working, have existed, and therefore, occasional oppression in these departments has long prevailed. Let the

following extract suffice, from a document drawn up by a gentleman in this branch of business, Mr Wood,—to mention whose name is to kindle at once the most enthusiastic feelings in the bosoms of the honest operatives of the north, and to whom is due the honour of originating and supporting this attempt to regulate the labour of children; and who, while he has conducted his own manufacture with the greatest humanity and kindness, has still earnestly sought to ameliorate the general condition of the labouring poor. This gentleman gives the ages of 475 persons, principally females, employed at a worsted-mill, which, it appears, average about the age of thirteen; and adds—

“ ‘Children of these years are obliged to be at the factories, winter and summer, by six in the morning, and to remain there till seven in the evening, with but one brief interval of thirty minutes, every day except Saturday, ceasing work on that day, in some factories, at half-past five, in others, at six or seven p.m. Not unfrequently this labour is extended till eight or nine at night—fifteen hours—having but the same interval for meals, rest, or recreation : nay, such is the steady growth of this over-working system, that children have been confined in the factory from six in the morning till eight at night—fourteen hours continuously, without any time being allowed for meals, rest, or recreation;—the meals to be taken while attending the machines ; and this the practice of years.’

“ This picture, sufficiently appalling, has also to be darkened by the addition of frequent night-labour. Such is the practice at Bradford and the neighbourhood. But to show that the evils are not confined to any particular neighbourhood, and that they prevail wherever unprotected children are the principal labourers of the community, I shall next advert to their treatment in the flannel manufactories in the Principality of Wales. I quote the following account which I have received from the most respectable quarter :—

“ ‘With certain fluctuations in the degree of labour, re-

sulting from the difference in the demand of manufactured goods, the children here work twenty-four hours every other day, out of which they are allowed three hours only for meals, &c. When trade is particularly brisk, the elder children work from six in the morning till seven in the evening, two hours being allowed for meals, &c., and every other night they work all night, which is a still more severe case; for this additional night labour they receive five-pence. There is another lamentable circumstance attending the employment of these poor children, which is, that they are left the whole of the night alone; the sexes indiscriminately mixed together; consequently you may imagine that the depravity of our work people is indeed very great. The adults are employed in feeding the engines. Independent of moral considerations, the accidents that occur to these poor little creatures are really dreadful; the numbers of persons to be seen with mutilated and amputated limbs are quite distressing, and this will ever be the case till some better regulation is carried into effect. There is not a single place of charitable education for a population of about 8,000 souls beyond a Sunday-school.'

"As to woollen mills, they are not, generally speaking, injurious to health, though such is the case in certain departments of them, especially since the introduction of the rotatory machines. Here I might argue that the lightness of the labour, which is the reason usually urged against an interference with excessive hours, no longer applies, as in woollen mills the labour is, in general, much more strenuous than that in most of the before-mentioned factories. But I disdain to avail myself of an argument, however plausible, which I believe to be fallacious, and I will here observe, once for all, that it is not so much the degree of labour which is injurious to these work-children (how revolting the compound sounds!—it is not yet admitted, I think, into our language; I trust it will never be familiarised to our feelings);

—I say, it is not so much the degree, as the duration of their labour, that is so cruel and destructive to these poor work-children. It is the wearisome uniformity of the employment,—the constrained positions in which it is pursued—and, above all, the constant and close confinement, which are more fatiguing to the body as well as mind, than more varied and voluntary, though far stronger, exertion. I dwell upon this point, because it is the sole possible plea for the long and imprisoning hours of the present laborious system : though when properly considered, it is one of the most powerful arguments against it. Light labour ! Is the labour of holding this pen and of writing with it strenuous ? And yet, ask a clerk in any of the public offices, or in any private counting-house, when he has been at his employment some half-dozen hours in the day less than one of these children, whether he does not think that he has had enough of this light labour—to say nothing of the holidays, of which he has many, and the child none. Ask the recruit recent from the plough, whether an hour of his light exertion is not more fatiguing than any three he ever endured in the fields. Ask his experienced officer how long he can subject even the veteran to this sort of slight but constrained exertion, though in the open air, with impunity. I might appeal to the chair, whether the lingering hours which have to be endured here, though unaccompanied with any bodily exertion whatever, are not ‘weariness to the flesh.’ But what would be the feelings of the youngest and most active individual amongst us, if, for example, he were compelled to pace that table, engaged in some constant and anxious employment, stunned with the noise of revolving wheels, suffocated with the heat and stench of a low, crowded, and gas lighted apartment, bathed in sweat, and stimulated by the scourge of an inexorable task-master ? I say, what would be his ideas of the light labour of twelve or fourteen hours in such a pursuit, and when, once or twice in every week, the night also was added to such a day ? And

how would he feel, if long years of such light labour lay before him? If he be a parent, let him imagine the child of his bosom in that situation, and then judge of the children of thousands who are as dear to the Universal Parent as are his own to him! Let him think of his own childhood, and he will then remember that this light labour is the fatigue of youth, and that strenuous exertion, when the buoyant spirit exercises the entire frame, is its sport. I might quote authorities on this subject; but it is unnecessary. Common sense and common feeling at once decide the point, and confute this disgusting plea of tyranny for the captivity of youth. Hence the late Sir Robert Peel, in bringing forward his last measure, emphatically observed, that ‘it was not so much the hardship as the duration of labour, which had caused the mischievous effects on the rising generation.’ But if, after all, honourable members choose to argue the question on different grounds, and wish to establish a variation in the duration of the labour of children in mills and factories, in reference to the nature of the employment,—be it so. Confident in my own mind that the bill proposes the utmost limit which the youthful constitution can safely bear, in any pursuit, or under any circumstances, I can have no objection to that period being abridged in the more pernicious and strenuous employments of the country.

“I shall not attempt at present to give any precise account of the length of labour generally borne in different mills and factories; it varies according to the humanity of the employer, and the demand for his goods at particular seasons. But let me here remark, that these variations constitute one of the main reasons for a legislative protection; otherwise the humane masters will be driven out of the trade: for these, it is quite clear, cannot control others less feelingly disposed. They are, indeed, in the present state of things, as little free agents as the children whom they employ; and, moreover, the want of a due regulation throws the effects of those fluctuations to

which trade and manufactures are subject, in an undue and distressing degree upon those who are the least able to sustain their effects. Thus, if the demand and profit of the employer increase, the labour of the operatives, most of whom are children, augments, till many of them are literally worked to death; if that demand diminish, the children are thrown partially or wholly out of work, and left to beggary and the parish. So that their labour, averaged throughout the year, as some millowners I perceive have calculated its duration, does not appear so excessive. For, at the very moment that a strenuous opposition is being made against the curtailment of infantile labour, the masters themselves, in certain flax-mills in the North, have curtailed it to some purpose—having, if I am not misinformed, diminished the employment in some mills, and shut up others entirely. And I have no doubt but that, at this particular moment, abundance of evidence might be adduced before a select committee to show that the hours mentioned in the bill are observed, and indeed a much stricter limitation enforced. But then, if it be right that the owners should be allowed to throw out of employment all these children at a few days' notice, is it proper that they should be permitted to work them for an unlimited number of hours, the moment it suits their purpose? If the effect of this bill were, in some measure to equalize the labour of these poor children, and thereby prevent those fluctuations which are so distressing to them in both its extremes, it would so far accomplish a most beneficent object. It might, I think, transfer a little of the fluctuation from the factory to the stock-room, with great advantage to the operatives, and, consequently, to the public at large.

“It is impossible to furnish any uniform account of the hours of labour endured by children in these factories, and I am unwilling to represent extreme cases as general ones, although it is the bounden duty of Parliament to provide against such, as it does, for example, with respect to atrocious

crimes, which are extreme cases in civilized society. I shall therefore only give one or two instances of the extent of oppression to which the system is occasionally carried. The following were the hours of labour imposed upon the children employed in a factory at Leeds last summer :—On Monday morning, work commenced at six o'clock ; at nine, half an hour for breakfast ; from half-past nine till twelve, work. Dinner, one hour ; from one till half-past four, work. Afternoon meal, half an hour ; from five till eight, work : rest for half an hour. From half-past eight till twelve (midnight), work : an hour's rest. From one in the morning till five, work : half an hour's rest. From half-past five till nine, work : breakfast. From half-past nine till twelve, work ; dinner ; from one till half-past four, work. Rest half an hour ; and work again from five till nine o'clock on Tuesday evening, when the labour terminated, and the gang of adult and infant slaves was dismissed for the night, after having toiled thirty-nine hours, with brief intervals (amounting to only six hours in the whole) for refreshment, but none for sleep. On Wednesday and Thursday, day work only. From Friday morning till Saturday night, the same prolonged labour repeated, with intermissions as on Monday, Monday night, and Tuesday ; except that the labour of the last day closed at five.—The ensuing day, Sunday, must, under such circumstances, be a day of stupor ; to rouse the children from which would only be to continue their physical sufferings, without the possibility of compensating them with any moral good. Clergymen, Sunday school-masters, and other benevolent persons, are beginning to feel this to be the case ; physicians, I find, have long observed it ; and parents, wishful as they are that their offspring should have some little instruction, are yet more anxious that they should have rest. Sunday schools have long been rendered appendages to the manufacturing system, which has necessarily emptied the day schools of the poor wherever that system prevails : not content with monopolizing

the whole week with protracted labour, the Sabbath itself is thus rendered a day of languor and exhaustion, in which it is impossible that due instruction can be received, or the solemn duties which religion enjoins duly performed; in fact, it is a mere fallow for the worn-out frame, in order that it may be able to produce another series of exhausting crops of human labour. If some limits, therefore, are not prescribed to these constant and cruel encroachments, our labouring population will become, ere long, imbruted with ignorance, as well as enslaved by excessive toil.

“I now proceed to show the physical and moral consequences of this dreadful system; and on this important part of the subject, as I am aware that I shall be at issue with its supporters and apologists, I shall appeal to authorities which none will be disposed lightly to dispute; and to facts—decisive, as I think, of the whole question—facts which I challenge them to controvert or evade. The authorities to which I allude, are such as the late Dr Baillie, Sir Astley Cooper, Sir Gilbert Blaine, Doctor Pemberton, Sir Anthony Carlisle, Sir George Tuthill, and many other physicians and surgeons of the highest eminence and celebrity throughout the profession, especially for their physiological science. The deliberate opinions of these distinguished persons on the subject under our consideration are contained in these volumes (minutes of evidence before former parliamentary committees). Time would fail were I now to read them, or even to make selections. They ought, however, to have been carefully consulted by certain hon. members before they had cried out for another select committee; ignorant I would fain hope, of the affecting evidence published by preceding ones. Let it suffice that these high authorities are strong and unanimous against the system of early and protracted labour for children and young persons. I appeal to the whole of them in favour of this bill, or rather, indeed, of far more binding limitations than it proposes; for when I

advert to their deliberate declarations, I feel a growing dissatisfaction at its provisions. Other medical authorities of great eminence have since then appeared, whose views, I know, in many instances, to be, if possible, still more marked and decided upon this important point; and can it, I would ask the House, be a question whether we should tolerate a degree of infantile labour, which our highest medical authorities assure us the human frame is utterly incapable of sustaining with impunity?

“If it be objected that these individuals, however great and distinguished, had no practical knowledge of the factory system and its effects, I will turn to another description of evidence—namely, to that of professional gentlemen practically acquainted with it, and long residing in its very seat and centre—Manchester. The first is a name equally dear to philosophy and philanthropy,—long at the head of the profession in that part of the empire—Dr Perceval. He saw the rise, progress, and effects of the system, and closely connected as he was with many who were making rapid fortunes by it, still he expressed himself upon the subject, as a professional man and a patriot, in terms of the strongest indignation. He says, even of the large factories, which some suppose need little regulation, that they ‘are generally injurious to the constitution of those employed in them, even when no particular diseases prevail, from the close confinement which is enjoined, from the debilitating effects of hot or impure air, and from the want of the active exercises which nature points out as essential to childhood and youth, to invigorate the system, and to fit our species for the employment and the duties of manhood. The untimely labour of the night, and the protracted labour of the day, with respect to children, not only tend to diminish future expectation as to the general sum of life and industry, by impairing the strength and destroying the vital stamina of the rising generation, but it too often gives encouragement to idleness,

extravagance, and profligacy, in the parents, who, contrary to the order of nature, subsist by the oppression of their offspring.' He goes on to deplore the impediments which the system throws in the way of education, and asserts the necessity of establishing '*a general system of laws for the wise, humane, and equal government of all such works.*' I regret that time will not permit me to quote him more at large; but who that is acquainted with general literature or philosophy, can be ignorant of the writings of Perceval of Manchester?

"I will refer the House to another authority, belonging to a different branch of the same profession, and scarcely a less celebrated one,—I mean the late Mr Simmons. After nearly thirty years' experience in the General Infirmary of Manchester, and being also at the head of other charitable institutions in that town connected with his profession, few men, I should conceive, were more competent to speak as to the effects produced by the factory system than himself. I must again deeply regret that I cannot quote his opinions at length. His description of the consequences of this species of over-exertion is most appalling; and he adds these emphatic words:—'I am convinced that the hours of employment are too long to endure at *any age.*' Speaking of the evils of the system, he says, 'I shudder at contemplating them!'

"I might multiply these authentic and affecting testimonies to almost any extent. I will, however, present, in as few words as possible, the effects, as described by medical men, of these long hours of confinement, without sufficient intervals for meals, recreation, and rest, and continued often through the night, in rooms artificially heated, and lit by gas; the atmosphere being otherwise so polluted and offensive as to render respiration painful, even for a few minutes. They describe the consequences to be in many cases, languor and debility, sickness, loss of appetite, pulmonary complaints, such as difficulty of breathing, coughs, asthmas, and consumptions; struma, the endemia of the factory, and other

chronic diseases;—while, if these more distressing effects are not produced, the muscular power is enfeebled, the growth impeded, and life greatly abridged. Deformity is also a common and distressing result of this over-strained and too early labour. The bones, in which the animal, in contradistinction to the earthy, matter is known to prevail in early life, are then pliable, and often cannot sustain the superincumbent weight of the body for so many hours without injury. Hence, those of the leg become bent; the arch of the foot, which is composed of several bones of a wedge-like form, is pressed down and its elasticity destroyed, from which arises that disease in the foot only lately described, but common in factory districts. The spine is often greatly affected, and its processes irregularly protruded, by which great deformity is occasioned. The ligaments also fail by over-pressure and tension. Hence the hinge joints, of which they are the main support, such as those of the knee and the ankle, are over-strained, producing the deformity called knock-knees and lame ankles, so exceedingly common in mills. Thus are numbers of children distorted and crippled in early life, and frequently rendered incapable of any active exertion during the rest of their days. To this catalogue of sufferings must be added, mutilation of limbs or loss of life, by frequent accidents. The overworking of these children occasions a weariness and lethargy which it is impossible always to resist: hence, drowsy and exhausted, the poor creatures fall too often among the machinery, which is not in many instances sufficiently sheathed, when their muscles are lacerated, their bones broken, or their limbs torn off, in which cases they are constantly sent to the infirmaries to be cured, and if crippled for life, they are turned out and maintained at the public cost; or they are sometimes killed upon the spot. I have myself known, in more instances than one, the arm torn off,—in one horrible case, both; and a poor girl now exists upon a charitable subscription who met with that dreadful accident

at one of the flax mills in my neighbourhood. In another factory, and that recently, the mangled limbs of a boy were sent home to his mother, unprepared for the appalling spectacle: I will not describe the result. It is true that a great majority of these accidents are of a less serious nature, but the admission-books of the infirmaries in any manufacturing district will show the number; and their accounts of the expense of buying irons to support the bending legs of the young children who become crippled by long standing in the mills, will also prove the tendency of over-confinement and early labour to produce deformity. Dr Ashton and Surgeon Graham, who examined six mills in Stockport, in which 824 persons were employed, principally children, have reported the result individually, and the list seems rather that of an hospital than a workshop. The particulars are deeply affecting, but I must only give the totals. Of 824 persons, 183 only were pronounced healthy; 240 were stated to be delicate; 258 unhealthy; 43 very much stunted; 100 with enlarged ancles and knees; and among the whole there were 37 cases of distortion. The accidents by machinery are not, I think, noticed; but I find that Dr Winstanley, one of the physicians of the Manchester Infirmary, on examining 106 children in a Sunday school, discovered that no less than 47 of them had suffered accidents from this one cause. I have this morning received, from one of the most eminent surgeons of this metropolis, a letter, in which he informs me, that on making a tour through the manufacturing districts some years ago, he was painfully struck with the numerous cases of mutilation which he observed, and which he attributed to this long and wearying system of labour in mills and factories. Of the mortality which this system occasions, I shall speak hereafter.

“Can anything, then, darken the picture which I have hastily drawn, or, rather, which others, infinitely more competent to the task, have strikingly portrayed? Yes, Sir, and that remains to be added which renders it the most

disgusting as well as distressing system which ever put human feelings to the utmost test of endurance. It has the universally recognised brand and test of barbarism as well as cruelty upon it. It is the feeble sex principally on which this enormous wrong is perpetrated. Female children must be laboured to the utmost extent of their physical powers, and, indeed, frequently far beyond them. Need I state the peculiar hardships, the disgusting cruelty which this involves? I speak not, poor things, of the loss of their beauty,—of the greater physical sufferings to which their sex exposes them. But, again taking with me the highest medical authorities, I refer to the consequences of early and immoderate labour; especially at the period when the system rapidly attains its full development, and is peculiarly susceptible of permanent injury. Still more are the effects felt when they become mothers, for which, I fear, their previous pursuits have little qualified them. It is in evidence, that long standing has a known tendency—how shall I express it?—*contrahere et minuere pelvem*,—and thereby to increase greatly the danger and difficulty of parturition, rendering embryotomy—one of the most distressing operations which a surgeon ever has to perform—occasionally necessary. I have communications upon this subject from persons of great professional experience; but still I prefer to appeal to evidence before the public; and one reference shall suffice. Dr Jones, who had practised in the neighbourhood of certain mills, in favour of which much evidence was adduced, which indeed it is rarely difficult to procure, states, that in the ‘eight or ten years during which he was an accoucheur, he met with more cases requiring the aid of instruments (that circumstance showing them to be bad ones) than a gentleman of great practice in Birmingham, to whom he was previously a pupil, had met with in the whole course of his life.’ Abundance of evidence to the same effect is before me. But I forbear. I confess, therefore, that I feel my indignation roused when I see papers put forth in which

it is stated, as a recommendation forsooth of the present system, and as a reason why it should by no means be regulated, that in certain mills girls are principally employed. This a matter of exultation! I would ask those who so regard it, in the language of the poet, ‘Art thou of woman born, and feel’st no shame?’

“Nor are the mental, any more than the physical, sufferings of these poor young creatures to be overlooked. In the very morning of life, when their little hearts yearn within them for some relaxation and amusement, to be thus taken captive, and debarred the sports of youth, is almost as great, nay, a greater cruelty than to inflict upon them thus early the toil of an advanced life. Their fate, alas! reverses the patriarch’s pathetic exclamation, and their infant days are labour and sorrow. I perceive that I excite the risibility of an honourable gentleman opposite. What there is to smile at in these just representations of infantile sufferings, I am really at a loss to imagine. I will venture, however, to give him and the House a few more of these amusing facts before I have done with the subject.

“It may be thought almost impossible that children should be assembled so early, and dismissed so late, and still kept through the whole period in a state of active exertion. I will attempt to explain this. First, then, their early and punctual attendance is enforced by fines, as are many other regulations of a very severe character; so that a child may lose a considerable part of its wages by being a few minutes too late in the morning. That they should not leave too soon is very sufficiently provided against. Now, this extreme punctuality is no slight aggravation of the sufferings of the child. It is not in one case out of ten, perhaps, that the parent has a clock; and, as nature is not very wakeful in a short night’s rest after a long day’s labour, the child, to ensure punctuality, must be often roused much too early. Whoever has lived in a manufacturing town

must have heard, if he happened to be awake many hours before light on a winter's morning, the patter of little pattens on the pavement, continued, perhaps, for half an hour together, though the time appointed for assembling was the same. Even then the child is not always safe, however punctual, for in some mills two descriptions of clocks are kept, and it is easy to guess how they are occasionally managed. So much for the system of fines, by which, I am told, some millowners have boasted that they have made large sums annually.

“Then, in order to keep the children awake, and to stimulate their exertions, means are made use of, to which I shall now advert, as a last instance of the degradation to which this system has reduced the manufacturing operatives of this country. Sir, children are beaten with thongs, prepared for the purpose. Yes, the females of this country, no matter whether children or grown up—I hardly know which is the more disgusting outrage—are beaten upon the face, arms, and bosom—beaten in your free market of labour, as you term it, like slaves. These are the instruments. [*Here the honourable member exhibited some black, heavy, leathern thongs, one of them fixed in a sort of handle, the smack of which, when struck upon the table, resounded through the House.*] They are quite equal to breaking an arm, but that the bones of the young are, as I have before said, pliant. The marks, however, of the thong are long visible, and the poor wretch is flogged before its companions—flogged, I say, like a dog, by the tyrant overlooker. We speak with execration of the cart-whip of the West Indies, but let us see this night an equal feeling rise against the factory-thong of England. Is it necessary that we should inquire, by means of a select committee, whether this practice is to be put down, and whether females in England shall be still flogged to their labour? Sir, I should wish to propose an additional clause to this

bill, enacting that the overseer who dares to lay the lash on the almost naked body of the child shall be sentenced to the tread-wheel for a month, and it would be but right if the master who knowingly tolerates the infliction of this cruelty on abused infancy, this insult upon parental feeling, this disgrace upon the national character, should bear him company, though he roll to the house of correction in his chariot.

“But the entire system, as now conducted, has not merely its defenders, but its eulogists. Hence, in a celebrated *Review*, in which its rise and progress are discussed, we find this opinion delivered with the utmost confidence:—‘We scruple not to say that the health, morals, and intelligence of the population have all gained by the establishment of the present system’ That this improvement ought to have been the result, I have already said: that it will be so, I confidently hope; but it can only be the case by adopting regulations of the nature now proposed. Health, morals, and mental improvement can never consist with constant confinement and excessive labour imposed upon any class of the community, especially upon its youth. That the general intelligence, however, has increased, I fully believe; so it would have done under any system—so it has in almost every country, whether manufacturing or otherwise: and I claim this increasing intelligence in favour of the regulation which I propose, for it has declared in behalf of this measure with a force and unanimity rarely known on any other subject. But as to public morals, alas! what has been gained by this excessive slavery of the juvenile part of the manufacturing population? It is during the present century, as the article in question shows, that the system has so greatly increased. The number of criminal committals has been furnished since the year 1805; let us, then, advert to those important returns for proof upon this subject. In the metropolitan county, including London, in which, if anywhere, the number is likely to be excessive, and the

increase great, the average of the first three years was 1,192, that of the three last, 3,491, nearly three-fold! But in Lancashire (including its rural hundreds) the average of the same period had increased from 369 to 2,088, nearly six-fold! The mean proportion of the committals of England, exclusive of these two counties, being now about 1 in 1,255—that of Lancashire as 1 in about 550 annually. Where is this to end?

“As to that species of immorality not cognizable by law, there are no means of obtaining equally precise information, otherwise I fear there would be found in this respect as little ground for exultation. Not to mention minor offences, the practice of tippling and drunkenness has astonishingly increased, and has been accompanied by a revolting indecency not formerly known among us: women and children now publicly indulging in this vice; such are the degrading effects of this system. The great increase of debauchery of another kind, it would be absurd to deny; I never did hear it denied, that many of the mills, at least those in which night-working is pursued, are, in this respect, *little better than brothels*. The science of human physiology has been, I may say, disgustingly advanced, having been able to demonstrate how extremely near the confines of actual childhood the human female may become an unhappy mother, from the disgraceful scenes which have occurred in some of these mills and factories. Indeed, it is in evidence, on the authority of medical men conversant with that state of society, that the period of puberty is unnaturally anticipated. But not to dwell upon the effects of this precocity, I will proceed to consider the alleged improvement in health. I shall determine this important point, by referring to the place selected by the strenuous advocates of the system, and its principal seat, Manchester: the surprising longevity of that town having been over and over again asserted in proof of the incalculable advantages of the factory-system, as now conducted.

“Speaking of the general health of that town, I of course refer to that of the operatives, and not to that of the higher and more opulent ranks: and, in determining this, I shall still refer to medical authority and statistical facts, and not to loose and unfounded opinions, by which the public has been too long imposed upon and misled. I take, then, a tract just published, entitled ‘Remarks on the Health of English Manufacturers, and on the Need which Exists for Establishing for them Convalescent Retreats.’ It is written by Mr Robertson, a gentleman well known in the medical world, and author of previous works of deserved celebrity. He rebuts Mr Senior’s assumption, founded on a series of gross mistakes, as to the great improvement which has taken place in our manufacturing population, and says of these so-much-improved operatives, that ‘the nature of their present employment renders existence itself in thousands of instances, in every great town, one long disease.’ He states, regarding Manchester, that ‘during the last year, 1830, the patients admitted at the four great dispensaries amounted to 22,626,’ independently of those assisted by other charitable institutions, such as the infirmary, &c., amounting in all to at least 10,000 more. To this he adds other calculations, which brings him to the conclusion that ‘not fewer, perhaps, than three-fourths of the inhabitants of Manchester annually are, or fancy they are, under the necessity of submitting to medical treatment.’ He describes at some length, and with great force and feeling, the evils of the factory system, and attributes to it, to use his own words, ‘the astounding inebriety’ of the population, many of whom have recourse, after long and exhausting toil, to that means of kindling a temporary sense of vigour and comfort. He states the lamentable effects, in other points of view, which are thus produced, and the want of moral and mental improvement with which they are necessarily accompanied. He says, that the present manufacturing system ‘has not produced a healthy population,—neither one well-

instructed and provident, but one, on the contrary, where there exists always considerable, and sometimes general poverty, and an extraordinary amount of petty crime,—that, in several respects, they are in a less healthy and a worse condition than at any period within the last two centuries.’

“I will give an appalling proof of this general misery and degradation. It appears, that during the last year, there were delivered by the lying-in charity of Manchester, no less than 4,562 poor married women; far more than half, therefore, of the mothers of Manchester are assisted by public charity,—in a word, nearly three-fifths of the children of that town are branded with the stigma of pauperism at their very birth.

“If it be argued that this institution is too indiscriminate in its charity, and consequently that its operations afford no just indication of the extent of the distress actually endured, I will again quote, in reply, the authority of Mr Robertson:— ‘An overwhelming majority of the persons so relieved, are in a state of incredible destitution!’ I proceed to prove his assertions by still stronger facts.

“The main, and, as it has been hitherto held, triumphant defence of the present system of excessive infantile labour, has been placed upon the assumed longevity of Manchester: and had what has been asserted in this respect been true, or at all approaching to the truth, the argument would have been doubtless settled in its favour. Thus we find it stated, over and over again, that the mortality which had kept diminishing for half a century, had, in 1811, fallen as low as one in seventy-four; and that the proportion in 1821 was still smaller. It is asserted, I see, in a petition from the mill-owners of Keighley against this bill, that this proportion is one in fifty-eight, while that of Middlesex is one in twenty-six. I am glad the opponents of the bill have given this sample of their intelligence. But to return. It has been long remarked by statistical writers, that every community to which large numbers of immigrants, principally in the active period of

life, are constantly added, will exhibit a corresponding diminution in the proportion of deaths, without that circumstance at all proving any real increase in the general health and longevity of the place. But the above proportions were, nevertheless, so extravagant, and the argument founded upon them so important, that I determined to give the subject the most careful and impartial examination. I have done so; and these are the results. Taking the whole parish of Manchester,—and so far, therefore, doing great injustice to my argument, as that parish contains I think nearly thirty townships and chapelries, some of which are principally agricultural,—but, taking the whole parish, I find that, in the collegiate church there, and in six other churches,—in the two churches of Salford, in those of Charlton-row, now part of the town, and in the eleven chapelries, including the Roman Catholic and other dissenting burial-grounds, there were interred between the years 1821 and 1830 inclusive, 59,377 individuals. The mean population of the whole parish (*i. e.* the geometric mean, in order to be as exact as possible) was, during the same period, 228,951. Now, the number of burials is defective, one church (that of Peter's) being omitted, and I think other burial-grounds also; but does the number actually returned give a proportion of 1 in 74? or even as the Keighley petitioners reckon, 1 in 58? No, Sir, it gives a proportion of 1 in $37\frac{9}{10}$ ths, as the annual mortality of the extended district included in the entire parish of Manchester! In Salford the number of deaths during the same term was 996, the mean population having been 32,421, or 1 death in every $32\frac{1}{2}$; and this in a population, let me again repeat, increasing immensely by immigration.

“But a further calculation has to be made before the subject under consideration can be properly understood. A vast excess of this mortality, we may be assured, rests upon the poor; for nobody disputes that the longevity of the wealthier classes has, in the meantime, greatly improved.

Thus, in Paris, a large and unhealthy city, where the mortality, however, is, I think, less than 1 in 42, Dr Villermé found, that in the first arrondissement, where the wealthier inhabitants principally reside, only 1 in 50 died annually; while, in the twelfth, principally inhabited by the poor, the proportion was as great as 1 in 24. Apply this to the mortality of Manchester, and then let us hear what can be said respecting the longevity of the poor manufacturers of that place. It proves all that has been advanced concerning the effects of infantile and long-protracted labour, which not only enfeebles, but sweeps to their untimely fate, so vast a proportion of the population.

“But on a point of such paramount importance, and so entirely decisive of the argument, no species of evidence ought to be wanting. I have, therefore, examined the last census of Manchester with great care,—I mean that part of it in which the registered burials are given, together with the ages of the interred; and I have compared the proportion of those buried under the age of forty, and those buried above that age, with the corresponding interments of the immensely larger cities of London and Paris, taking the last ten years in the former instance, and one intermediate year in the two latter, without any selection whatsoever: these are the results:—to every 100,000 interments in each of these places under forty, there would be above that age, in London, 63,666; in Paris, 65,109; in Manchester, 47,291 only; in other words, 16,375 fewer would have survived that period in Manchester than in London, and 17,818 fewer than in Paris. Can anything, then, be more true than the complaint of the operative spinners, that few of them survive forty; and where is the man that dares to oppose the effectual regulation of so murderous a system?

“In the census of 1821, the population of England was generally given according to the different ages of the people. Manchester, however, furnished no such information; other-

wise, I am persuaded another argument might have been adduced demonstrative of the same melancholy fact. But I have examined the census of the hundred of Salford and of Macclesfield, which includes the towns of Macclesfield and Stockport, containing a great number of mills, and I have compared them with other places; and taking the number of children under five, and the numbers which arrived at the different divisions, and especially at the more advanced periods of life, I find that wherever the present system prevails, the most melancholy waste of human existence is clearly demonstrable. I may also observe, that calculating the mean duration of life from mortuary registers, it is, in the metropolis of England, about 32 years; in Paris, 31; in Manchester, $24\frac{7}{10}$ years only! In other towns, where the same system prevails, it is still less: thus, in Stockport it is 22 years only, that town not having increased by immigration quite so rapidly as Manchester. A comparison with Liverpool in this respect would be manifestly inconclusive, so large a number of the adult inhabitants of that great sea-port being constantly absent on maritime pursuits.

“Other calculations I hold in my hand, but I will not weary the House with giving them in detail. I cannot, however, refrain from presenting the results of one of them, as it disposes of the confident assertion of the improvement of the manufacturing community. In 1780, the celebrated Dr Heysham enumerated the population of Carlisle with great care, and separated the individuals into classes according to their ages. In 1821, a similar enumeration took place. In the meantime, the great discovery of vaccination had been made,—of such immense importance in these calculations: but it will be seen that even that, and all the acknowledged improvements in medical science, fail to compensate, in the amount of human lives, for the baneful effects of our manufacturing system as at present pursued. Calculating on the first division of the population, namely, the children under

five years of age, and assuming them to be 1,000, there were, in 1780, from five years old to twenty, 2,229; in 1821, 2,107; between twenty and forty, in the former period, 2,143; in the latter, 1,904; above forty, in 1780, 2,084; but, in 1821, 1,455 only !

“ Again, between the years 1779 and 1787 inclusive, Dr Heysham gives the number of interments in Carlisle; they amounted to 1,840, of which 1,164 were of persons under forty years of age, and the remaining 676 above that period of life. On examining the census, I find that between the years 1821 and 1830 inclusive, there have been buried in the same place 3,025 under forty, and 1,273 above that age. In the former period, therefore, there would be to every 10,000 deaths under the age of forty, 5,808 above that age; whereas, in the latter the proportion has been 4,208 only; showing how much smaller a number survives that age than formerly. The only way to evade this conclusion, is to suppose that the population has advanced with far greater rapidity since the former period; but this supposition would imply gross ignorance of the facts. The population of Carlisle was enumerated in 1764, and it is clear that it had been increasing even more rapidly before 1780 than it has done since. But in Carlisle, as everywhere else, the greatest proportion of mortality falls upon the poor; the expectation of life, as far as regards the upper classes of society, having evidently increased. What then becomes of the statements of the great improvement among our manufacturing poor, with facts like these before our eyes ?

“ I could multiply these proofs of the effects of the system to a great extent; but time will not permit, nor can it be necessary. I have taken up the challenge regarding the effects of the system as now pursued, given by its eulogists, and have contested the cause of humanity—as I trust I may call it—in the very arena, and with the weapons which themselves have chosen,—the prosperity, health, and longevity

of the operatives of Manchester. I have shown that the same results accompany the same system, wherever pursued, namely, — slavery, profligacy, crime, disease, and death. Transfer the system to the whole country, and then contemplate its effects ; those effects are seen rapidly developing themselves as it advances. Infantile labour leads to premature marriage, which crowds the generations upon each other, and this circumstance, together with the great discoveries in medicine, may have increased the numbers of the people ; but, as far as the system has prevailed, it has diminished the relative number of the athletic and active, and given us in their stead a weak, stunted, and degenerate race ; and thus lessened the proportion of those who have to bear the burdens and fight the battles of the country. On this latter point I am furnished with some striking facts, and among the rest, the comparative difficulty of passing recruits wherever this system prevails, but such evidence is unnecessary ; I would rather point to its more obvious and general effects. Look, then, I say, at the miserable condition of the feeble beings which are at once its instruments and its victims. Supposing that it has augmented our numbers, ‘It has,’ in the emphatic language of the Sacred Volume, ‘multiplied the people, and not increased the joy.’ I invoke, therefore, the justice, the humanity, and the patriotism, of this House : the feelings of the country are already roused. I call upon parliament to assist, by this measure, to lighten the load of an oppressed people, which bows them and their very children to the dust ;—I call upon it to snatch the scourge from the taskmasters of the country, and to break the bonds of infant slavery.

“The principal features of this bill for regulating the labour of children and other young persons in mills and factories, are these :—First, to prohibit the labour of infants therein under the age of nine years ; to limit the actual work, from nine to eighteen years of age, to ten hours daily, exclu-

sive of the time allowed for meals and refreshment, with an abatement of two hours on the Saturday, as a necessary preparation for the Sabbath; and to forbid all night-work under the age of twenty-one.

“In this bill I have omitted many important provisions which I had intended to insert, in order to obviate, if possible, multiplied objections, and to secure the attainment of its main object. Thus, I had drawn up a clause subjecting the mill-owner or occupier to a heavy fine when any serious accident occurred, in consequence of any negligence in not properly sheathing or defending the machinery. I had intended to propose a remission of an hour from each day's labour for children under fourteen, or otherwise of six hours on one day in every week, for the purpose of affording those who are thus early and unnaturally forced into the market of labour, some opportunity of receiving the rudiments of instruction and education, the expense of which, upon the modern system, would have been comparatively nothing, especially if shared between the millowner and the public. Above all, I had contemplated a clause putting down night labour altogether. None of these propositions, I think, are half so extravagant, if duly considered, as the demands now made upon infantile labour, involving, as they too often do, the sacrifice of happiness, health, improvement—nay, life itself. But not to endanger the principal object which I have in view, and regarding the present attempt as the commencement only of a series of measures in behalf of the industrious classes, all I propose to the House on the present occasion is, the remission of labour to the extent already explained.

“And, first, as to the period of life at which this bill permits children to be worked in factories—namely, nine years old. I will only observe that our ancient statutes—not always peculiarly favouring the condition of poverty—have not been neglectful of this matter. The 23rd of Edward III, if I mistake not, assumes that a male child under fourteen is

non potens in corpore ; and the same of a female child under twelve. In the 5th of Elizabeth, however, I think that period was fixed at twelve years for both sexes ; previously to which they were deemed *non potentes in corpore* : and I may further observe, that another humane provision of certain of these statutes, was the hiring of these young persons by the year, so that they might not be turned adrift on every fluctuation in the demand for their labour, nor even discharged in sickness, at the pleasure or convenience of their employers. The late Sir Robert Peel's bill originally fixed upon the age of ten, which was ultimately reduced to that of nine, where the present measure leaves it. Where is the individual, if disinterested and humane, that will contend that this is not early enough for these poor creatures to commence their career of labour and sorrow ? Then, as to the daily duration of their labour before they arrive at years of discretion—namely, these ten long hours, which, with the necessary intervals, stretch the term to at least twelve ; is not this sufficiently severe ? And at a period when the professions of humanity are so much louder than formerly—when the penal code of crime has been revised so much, and mitigated so often—that there should be no amelioration proposed in the penal code (for such I am sure I may term it) of infantile labour, seems indeed strange. The term proposed is that fixed upon by that truly benevolent and enlightened individual just alluded to. His opinion on introducing his last measure in 1815 I quote from the *Parliamentary Register* of that period:—

“ ‘What he (Sir Robert Peel) was disposed to recommend was, that no child should be so employed under the age of ten years, and the duration of their labour to be limited to twelve hours and a half *per diem*, including the time for recreation and meals, which would leave TEN HOURS for laborious employment.’

“ I think it would be almost an insult to the House to

appeal to authorities in proof that this is labour enough for any age to endure; abundantly sufficient for infancy and youth. A few medical authorities, however, I will quote, who delivered their opinions before Sir Robert Peel's committee. Dr Jones, a physician of much experience, asserts that '*eight or nine hours are the longest period which he could sanction.*' Dr Winstanley, physician of the Manchester Infirmary, affirms that '*eleven hours could not be endured without injury.*' Mr Boutflower, an eminent surgeon of the same place, says that '*ten hours are amply sufficient.*' Mr Ogle, another experienced individual of the same profession, says that '*eight or nine hours are sufficient.*' Mr Simmons, the senior surgeon of the Manchester Infirmary, declares that the hours of working of a person under sixteen, exclusive of the time allowed for meals, ought not to exceed '*nine hours in winter, and ten in summer ;*' and he adds that to which I particularly call the attention of the House: 'It may become a question,' says this eminent and experienced person, 'whether with impunity the *strength of adults is capable of much longer exertion than this.*' Sir Gilbert Blaine says, that under ten, he 'should have no objection to sanction *five or six hours*, and at a more mature age *ten hours*, if not sedentary.' I might multiply these authorities at pleasure, but I will close them with the opinion of a physician, after whom I conceive few could be quoted with advantage—I mean the late Dr Baillie. He says, beyond *ten hours* a day there ought to be *no increase* of labour. 'I think,' says he, '*ten hours of confinement to labour, as far as I can judge, is as much as is compatible with the perfect well-being of any constitution.*'

"These appeals are to me most affecting. Is there not, Sir, something inexpressibly cruel,—most disgustingly selfish, in thus attempting to ascertain the utmost limits to which infant labour and fatigue may be carried, without their certainly occasioning misery and destruction;—the full extent of profitable torture that may be safely inflicted, and in appealing

to learned and experienced doctors to fix the precise point beyond which it would be murder to proceed? Are we to treat innocent infants, then, like the criminal soldier, who receives his punishment under the eye of the regimental surgeon, lest he should expire beneath the lash? But, horrible to relate, these eminent men *have* stood over fainting infancy, and long since *have* forbade the infliction; yet it has been continued till thousands have expired under it. They discharged their duty; they said ten hours were fully sufficient. That term has been exceeded; and I have shown the fatal consequences.

“ But if it be still necessary to sanction the term of labour they have fixed, I will appeal to general experience, which, after all, is, on a point like this, better than all authority. In every other description of labour, twelve hours a day, deducting at least the intervals which this bill also prescribes, is the utmost duration of labour that the master thinks of demanding, or the workmen of enduring. Such is the case in agriculture. Look at the county reports, and you will find that these are the utmost limits in summer, except during a few weeks in harvest, and that they are diminished in winter, so as to correspond with the days as they become shorter; averaging, perhaps, throughout the year, not more than eight or nine hours of actual work. The same rule obtains among all those workmen and artisans whose pursuits are most essential to human existence, such as masons, bricklayers, carpenters, and others. Nor is it either humane or patriotic, as an eminent medical writer has remarked, to tempt them to those protracted exertions, which are often endured at the expense of health, and bring on premature decay.

“ This natural regulation prevails everywhere, and has been observed in all ages. Thus, if we open the most ancient of volumes, we shall find that twelve hours, including the necessary intervals, constitute the longest day of human labour, which is still curtailed as the natural day shortens.

And as this limitation is dictated by the law of nature, so also is it affirmed by the law of God. Hear, then, the divine institution in this matter:—‘Thou shalt not oppress an hired servant that is poor and needy, whether he be of thy brethren or of the stranger that is in thy land within thy gates. At his day thou shalt give him his hire; neither shall *the sun go down* upon it; for he is poor, and setteth his heart upon it; lest he cry against thee to the Lord, and it be sin unto thee.’ ‘Are there not twelve hours in the day?’ is reiterated by still higher authority. ‘The night cometh when no man can work.’ Yet, though man cannot—will not;—yet, says this system, children SHALL. I ask, whether it be right to work weak and helpless children in England, longer than adult labourers and artizans in the prime of their days have consented to toil in any age or country.

“I make another appeal in behalf of these children. I appeal to the utmost labour imposed upon criminals and felons, sentenced to expiate their offences, often of an atrocious character, and almost always perpetrated by the daring and powerful, in the vigour of life,—in the jails, houses of correction, bridewells, or other places of confinement and punishment in this kingdom. The law, even regarding these, ‘in wrath remembereth mercy,’ and after the fullest investigation, doubtless lest justice should degenerate into cruelty, limits the powers of its own ministers, thus:—‘Every prisoner sentenced to hard labour, shall, unless prevented by sickness, be employed so many hours a-day, NOT EXCEEDING TEN, exclusive of the time allowed for meals, as shall be directed by the rules and regulations to be made under this Act, excepting on Sundays and other holidays.’ I have examined the whole of these regulations, as established in every prison in England, and I find that the average labour imposed falls far short of the limits prescribed by this bill. Even the convicts at the hulks, I am informed, are only worked in winter from eight o’clock in the morning as long as daylight lasts; and in summer, from seven in the morning till six in

the evening, from which time is deducted, in both seasons, about one hour and a-half for meals ; making, therefore, the duration of their actual labour, in summer, nine hours and a-half, and in winter, perhaps, about two hours less. I ask, then, whether it is right, or even politic, thus to give a premium to crime,—to protect guilt and persecute innocence : to work unoffending children longer than the law permits in the case of adult criminals and felons, whose labour constitutes their punishment ?

“ Lastly, I appeal, in behalf of these children, to the protection afforded to the slaves of our West Indian colonies. By the Orders in Council, bearing date the 2nd of November last, the labour of the slaves, in all the crown colonies of England, is regulated as follows:—By section 90 of those Orders, no slave, of whatever age, is to be worked in any agricultural or manufacturing labour in the night, but only between six o'clock in the morning and six o'clock in the evening. By section 91, all such slaves are ‘entitled to an entire intermission and cessation of every description of work and labour from the hour of eight till the hour of nine in the morning, and from the hour of twelve till the hour of two in the afternoon, of each and every day throughout the year.’ Hence no slave can be worked more than nine hours in any one day. So much for the adult slaves. But by the succeeding section (92) it is ordered that ‘no slave under the age of fourteen, or above the age of sixty, shall be compelled or required to engage in, or perform, any agricultural work or labour, in any of the said colonies, during more than six hours in the whole, in any one day.’ Passing over many other beneficent regulations, such as allowing forty holidays annually, exclusive of Sundays, and the prohibition of the labouring of pregnant females, although I see witnesses for the factory system assert, that to work white females up to the period of their confinement is not at all improper or injurious.—I say, passing over every minor consideration, I can hardly restrain my indignation within due bounds, while

I appeal to the regulations regarding these slaves, and see that those proposed in favour of British children are so vehemently opposed. I compare not the English child with the African child; but I ask this House, and his Majesty's Government, whether it would not be right and becoming to consider the English child as favourably as the African adult? You have limited the labour of the robust negro to nine hours; but when I propose that the labour of the young white slave shall not exceed ten, the proposition is deemed extravagant. I might further appeal to our treatment of the brute creation. Acts of Parliament have protected these from cruelty infinitely less than that which this system tolerates. And yet the selfishness of man acts as the guardian of his cattle, and renders such laws almost unnecessary. The gentleman will not ride his hunter before he is full grown, nor does the farmer yoke his yearling foal to the plough, and scourge it forward as many hours, and even more, than the full-grown colt could bear. No! it is the factory child alone that is thus treated. By what term shall we designate that state of the law which permits the labour of the helpless infant, hours after it would have interposed in behalf of the panting brute,—hours after the driver has released his youthful slave?

“But I contend that, even as regards the poor factory child, a being esteemed so utterly worthless, it is detrimental to the mere interests of the employer to pursue so cruel a course. Beyond certain limits, human industry and attention cannot be profitably stimulated. When those limits are passed, what remains but that imperfect service, equally distressing to the employed and unprofitable to the employer; and the oppressor may be well addressed in the words of the poet,—

‘Thou canst not take what nature will not yield,
Nor reap the harvest tho’ thou spoil the field.’

“This fact is already in evidence, in the sober language of prose: manufacturers have confessed, that this excessive labour has

been rarely profitable, though they have been urged to such a course by the rivalry and competition which the system both creates and continues. But were it ever so profitable, no gains, however ample, no prosperity, however permanent, could justify a practice so cruel and destructive.

“I have not time to enter upon the arguments which the advocates of the present system advance in its favour, nor to refute the objections which they perpetually urge against its proper regulation. They are precisely the same as those put forth by the planters in the crown colonies, against the amelioration, to which I have already referred, of the condition of the blacks and their children. The capital engaged,—the competition to be feared,—the irritation which will be produced,—the superior condition of those to be protected, are in both cases strenuously urged. The capability of children above a certain age to endure long labour, as well as adults, is equally asserted; and, above all, the coincidence of the request from both quarters, for a select committee, is also remarkable. But how different have Government met this proposition in each case? As regards the slave, they have declared that inquiries have been pursued long enough, and that they need no further information to enable them to legislate on ‘the eternal obligation which religion founds upon the law of God.’ Such are the words of the noble Secretary for the Colonies. Would that this reasoning and this feeling were transferred to these poor, oppressed children, slaves in all but name, who now demand our protection! I conceive that then ‘the eternal obligation which religion founds upon the law of God,’ would suffice to teach us our duty, without confiding our consciences to the keeping of a select committee. We can hardly be sincere in making this solemn appeal, if after having determined that six hours’ labour are enough for a negro child, we doubt whether ten are fully sufficient for a British one.

“Another objection of some of the opposing millowners

I will briefly notice. They cannot consent, forsooth, to an abridgment of the long and slavish hours of infant labour because of the corn-laws. Why, these individuals—some of them not originally, perhaps, of the most opulent class of the community—have, during the operation of these laws, rapidly amassed enormous fortunes; yet, during the whole period, they could seldom afford either to increase the wages or diminish the toil of these little labourers. to whom, however forgetful they may be of the fact, many of them owe every farthing they possess: they have generally done the reverse. And they talk of corn-laws as their apology! ‘This is too bad.’ Can any man be fool enough to suppose that, were the corn-laws abolished to-morrow, and every grain we consume grown and ground in foreign parts, such individuals would cease to ‘grind the faces of the poor?’

“But their opposition to this measure, it seems, is grounded on philanthropic considerations alone. The loss, say they, would fall upon the poor, whose wages would be diminished just in proportion as their extravagant labour was moderated. I rather doubt this conclusion; indeed I think we are warranted, not only by the dictates of common sense, but also by the principles of political economy, in denying it altogether. Nothing can be clearer, as a general axiom, than that the wages of labour are necessarily affected by the quantity of its products in the market. Thus a great authority in that science says, ‘When the demand is given, prices and values,’ consequently wages, ‘vary inversely as the supply.’ In full conformity with this doctrine, we have constantly heard the great and frequently-recurring distresses of the operatives, in certain branches of our manufactures, attributed to *over-production*. This was asserted, again and again, by the late Mr Huskisson, and repeated, I think, on a very recent occasion by the present Vice President of the Board of Trade. How then can it be, that if over-production has the effect of lowering wages, the moderating of this over-production could have any other effect than that of raising wages; and if so, how, I would ask,

can that over-production be so well moderated as by regulating the excessive labour of infant hands? If it be said in reply, that the employment of many of our mills and factories depends on a demand that is governed by foreign competition, I fearlessly reply that this is not the fact. First, as to every free market in the world, I maintain that the most formidable competition is not that between British and foreign spinners, but between rival British ones only, which, when traced to its ultimate consequences, will be too often found a competition in cruelty and oppression, of which these innocent little labourers are the victims. Then, as to other and restricted markets, and particularly those for our cotton-yarns, the competition is not, as is too often stated, between British labour and foreign labour, but between British labour and foreign imposts; which, as our goods have progressively cheapened, have, upon the protective principle, been proportionally advanced, and would be still further raised were we, under the sanction of the learned doubts already quoted, to work our unprotected children for three-and-twenty hours out of the four-and-twenty. Thus our cotton-twist is subjected to enormous duties in Russia, Austria, the United States, and elsewhere; while in France and Spain it is prohibited altogether. Now I would seriously ask those who raise this outcry regarding foreign competition, whether these heavy duties and prohibitions are not of themselves a sufficient answer to their entire argument. As to the idea of regulating the labour of our infants and children according to the fluctuations of foreign tariffs, which we may rest assured will be still fixed on the protective principle, it is as ridiculously absurd as it is infamously cruel. A very little attention, however, to this part of the argument of our opponents will show its utter fallacy. The cry concerning competition was as loudly raised against the bill of the late Sir Robert Peel as it can be against the present measure; and the ruin of the spinning trade was as confidently pronounced if it were carried. It passed, and what has been the result? Why,

the export of our yarns has nearly quintupled since he brought in that bill, while the trade of our then greatest competitors in that branch of manufacture, the French, has hardly kept pace even with the slow increase of their population. But the idea of French competition in cotton-spinning is a farce; their machinery, exceedingly inferior to ours, is also dearer to at least an equal degree; which circumstances, with many other obvious disadvantages, far more than counterbalance their supposed advantages in some other respects. Still more ludicrous is the novel assumption as to the rivalry of the United States in this respect. The country beyond all others where labour is dear and land is cheap, and where the mass of the population is so thinly scattered, turning cotton-spinner to any extent is too absurd for a moment's consideration. Let our import duty on the raw material, and theirs on the spun yarn, amounting together to perhaps 40 per cent., dispose at once of this plea of tyranny and oppression.

“ But the whole argument, or rather objection, as applied to many other branches of spinning, equally fails. The export of worsted yarns, for instance, is small. In silk spinning (not meaning by that term silk throwing) I believe the competition with foreigners is not felt; and yet, in many of the mills of this description, the shameful practice of working young and helpless children by night, and within an hour of the Sabbath morning, is unblushingly pursued. But I shall discuss the point no further. The same argument, I have already said, was urged against Sir Robert Peel's bill, to which he replied, that ‘no foreigners were then known to work the same number of hours’ even as he proposed. Nor do I believe that they then consented, if they do now, to labour their children in the heated atmosphere in which so many of ours sicken and perish. If they have commenced the practice of long hours and excessive labour, it is our competition, and not theirs, that stands chargeable

with these evils ; nor will I be too confident that our cruelty has not been contagious. Let us, then, enter into another competition with them — a competition of humanity and justice, and I firmly believe that they will still be our rivals. At all events, let us, as was strongly urged at the introduction of the free-trade system so called, set them the example.

“ In corroboration of the views I have taken, that excessive labour has a tendency the reverse of increasing its remuneration, I might appeal to the great and constant declension in the declared or real, as compared with the official or assumed and stationary value, of our exported goods, of almost every description ; especially of those more particularly alluded to. Thus, since the peace (1815), though our exports of cotton yarns have increased in quantity nearly five-fold, their real value has advanced little more than one-third ; a fact which, together with many others of a similar nature, indicates but too clearly the increasing labour and diminishing remuneration of our industrious and over-laboured population. But this subject would carry me into too wide a field ; and one, moreover, on which it is unnecessary for me, on this occasion, to expatiate. There are few operatives of this country, I fear, who are not made aware of this fact by the most infallible of all teachers—bitter experience. Those who contend that the amount of wages follows the degree of labour, however great or protracted, seem, in my apprehension, totally to lose sight of one of the most simple and beautiful provisions in the economy of nature—that whereby human wants and necessities are nicely and beneficently balanced by the means of supplying them : but in this striking adjustment neither infant nor excessive labour is contemplated, and where it is called forth, it will sooner or later derange the whole frame of society. Finally, I would ask those who are still disposed to hold a contrary notion, and who therefore calculate with such arithmetical precision the exact loss that the operatives will sustain if their labour or

that of their children were to be properly regulated, whether, upon their principles, the Sabbath is not a public nuisance and private injury, especially to the labouring poor. According to their views it must certainly have the direct effect of diminishing the wages of the industrious classes just one-sixth, and of reducing their comforts therefore in the same proportion. Dr Paley has argued to the contrary, and shown, that in the present state of society the labourers of the community receive as much for their six days' toil as they would for the seven. I think he might have said more, for reasons obvious enough, but upon which I shall not now enter. He has thus demonstrated that sacred institution to be one in all respects favourable to humanity. The entire question is, I think, too plain to require this attempt at elucidation, and its final solution appears to be this:—that degree of labour will be ultimately most profitable to mankind which is dictated by their necessities, proportioned to their strength, and consistent with their welfare and happiness. In concluding these remarks, I cannot refrain from observing how uncandidly the very same set of reasoners deal on these occasions with the labouring poor. Over-production is to account for their low wages and consequent distress; diminished production, on the other hand, is to produce the very same effect, and still further lessen their means of subsistence. These arguments, or rather excuses, remind one of the poor lamb in the ancient fable, which found it impossible to satisfy the wolf, whether it drank above or below at the same stream: it was equally in fault, and suffered accordingly.

“I might here notice that an entire series of advantages which would incidentally result from this measure for shortening undue labour, is overlooked by its opponents; for instance, the giving of employment to idle hands, and the affording of additional activity to many industrious pursuits; but I shall pass these entirely by; nor shall I even insist upon the validity of the argument I have been just urging; on the

contrary, admitting all that has been said as to the fall in the wages of these children and young persons, and assuming the accuracy of the computations so confidently put forth on the subject, still, I say, the question stands upon other and more sacred grounds. It is one which the public will no longer permit the interested parties to decide by mere pecuniary calculations. And were the work-people threatened (as indeed they now are) that their wages would be diminished, and their means of subsistence still more abridged ;—that severe as are their present distresses, the furnace of their affliction would be ‘ heated one seven times more than it is wont to be heated,’—they have taken their firm resolve: they will not bow down to the golden image,—they will not sacrifice their children to Moloch ;—and where is the father, the patriot, the Christian, that does not glory in that resolve?

“I must now apologise to this House for having so long occupied its time and attention. I owe, however, a deeper apology to those whose cause I have attempted to advocate, for having, after all, left untouched many important claims which they have earnestly pressed upon my notice. But if honourable members will consult their own bosoms, they will find them there. We are about to deal with the strongest instinct and the holiest feelings of the human heart. The happiness and tranquillity of the present generation, and the hopes of futurity, depend, in no slight degree, on our resolves. The industrious classes are looking with intense interest to the proceedings of this night, and are demanding protection for themselves and their children. Thousands of maternal bosoms are beating with the deepest anxiety for the future fate of their long-oppressed and degraded offspring. Nay, the children themselves are made aware of the importance of your present decision, and look towards this House for succour. I wish I could bring a group of these little ones to that bar,—I am sure their silent appearance would plead more forcibly in their behalf than the loudest eloquence. I

shall not soon forget their affecting presence on a recent occasion, when many thousands of the people of the north were assembled in their cause,—when in the intervals of those loud and general acclamations which rent the air, while their great and unrivalled champion, Richard Oastler (whose name is now lisped by thousands of these infants, and will be transmitted to posterity with undiminished gratitude and affection);—when this friend of the factory children was pleading their cause as he alone can plead it, the repeated cheers of a number of shrill voices were heard, which sounded like echoes to our own ; and on looking around, we saw several groups of little children, amidst the crowd, who raised their voices in the fervour of hope and exultation, while they heard their sufferings commiserated, and, as they believed, about to be redressed. Sir, I still hope, as I did then, that their righteous cause will prevail. But I have seen enough to mingle apprehension with my hopes. I perceive the rich and the powerful once more leaguering against them, and wielding that wealth which these children, or such as they, have created, against their cause. I have long seen the mighty efforts that are made to keep them in bondage, and have been deeply affected at their continued success ; so that I can hardly refrain from exclaiming with one of old, ‘I returned, and considered all the oppressions that are done under the sun, and beheld the tears of such as were oppressed, and on the side of the oppressors there was power, but they had no comforter !’

“I trust, however, that this House, whose peculiar duty it is to defend the weak and redress the injured, will interpose and extend that protection to these defenceless children, which is equally demanded by the principles of justice, mercy, and policy. Many have been the struggles made in their behalf, but hitherto they have been defeated ; the laws passed for their protection have been avowedly and shamefully evaded, and have therefore had little practical effect but to legalize cruelty and suffering. Hence at this

late hour, while I am thus feebly, but earnestly, pleading the cause of these oppressed children, what numbers of them are still tethered to their toil, confined in heated rooms, bathed in perspiration, stunned with the roar of revolving wheels, poisoned with the noxious effluvia of grease and gas, till, at last, weary and exhausted, they turn out, almost naked, into the inclement air, and creep, shivering, to beds, from which a relay of their young work-fellows have just risen. Such, at the best, is the fate of many of them, while, in numerous instances, they are diseased, stunted, crippled, depraved, and destroyed. Sir, let that pestilence, which no longer walketh in darkness among us, but destroyeth at noon-day, once seize upon our manufacturing population, and dreadful will be the consequences. A national fast has been appointed on this solemn occasion; and it is well:—let it be one which the Deity himself has chosen,—let us undo the heavy burdens, and let the oppressed go free.

“Sir, I have shown the suffering,—the crime,—the mortality, attendant upon this system;—consequences which, I trust, parliament will at length arrest. Earnestly do I wish that I could have prevailed upon this House and his Majesty’s government to adopt the proposed measure, without the delay which will attend a further and, as I shall ever maintain, an unnecessary inquiry. Would that we might have come to a resolution as to the hours that innocent and helpless children are henceforth to be worked in these pursuits, so as to render the preservation of their health and life probable, and the due improvement of their minds and morals possible! Would that we had at once decided, as we could wish others to decide regarding our own children, underlike circumstances, or as we shall wish that we had done, when the Universal Parent shall call us to a strict account for our conduct to one of the least of these little ones! As the case, however, is otherwise,—as we are, it seems, still to inquire and delay, I will now move the second reading of the bill; and afterwards

propose such a committee as, I hope, will assist in carrying into effect the principle of a measure so important to the prosperity, character, and happiness of the British people."

The opposition to Mr Sadler's measure was such as to force him, though with great unwillingness, to agree to the appointment of a parliamentary committee, a source of great but, under the circumstances, unavoidable delay. This inquiry caused Mr Sadler great anxiety and labour. It was urged in reply, that Mr Sadler's statements were exaggerated, that the health and morals of young persons, and others engaged in factory labour, were satisfactory, that the manufacturers would, before a committee, entirely rebut the facts stated in Mr Sadler's speech, that legislation would prove injurious to the interests of the children, that the honourable member was a mistaken, though well-intentioned friend of the working classes. The general feeling of the House of Commons was favourable to inquiry, but opposed to immediate legislation. The Chancellor of the Exchequer (Lord Althorp), on behalf of the ministry, charged Mr Sadler with having stated only one side of the question, condemned the measure as hasty and ill-advised, admitted that some regulation was required to prevent cases of extreme hardship and oppression, and recommended "that the House should proceed in this matter with the utmost caution." The Chancellor of the Exchequer concluded his speech in the following words, which convey a sense of the position of the question, and the feeling of the majority of the House of Commons thereon: "I am not prepared to pledge myself in any way with respect to the measure. Even if the committee should report favourably of the bill, I will not pledge myself before the report be made to support a measure of such vast importance. I do not feel justified in saying, that whatever the opinion of the committee may be, I will abide by their decision. The honourable gentleman (Mr Sadler) has, I think, done perfectly right in referring this measure to a select committee.

Although he seems to think that a more public investigation would be desirable, I am inclined to believe that the examination of a select committee is more likely to elicit the truth than an examination at the bar of this House. I hope that, by the exertions of the committee, the whole question will be fairly brought under the consideration of the House."

The bill was read a second time, and, on the motion of Mr Sadler, was ordered to be committed to the following members:—Mr Sadler, Lord Viscount Morpeth, Mr Strickland, Mr Heywood, Mr Wilbraham, Mr George Vernon, Mr Benett, Sir Henry Bunbury, Mr Poulet Thomson, Mr Dixon, Sir John Cam Hobhouse, Mr Horatio Ross, Mr Robinson, Mr Meynell, Mr Percival, Mr Boldero, Lord Nugent, Mr Shiel, Sir George Rose, Mr Attwood, Mr Ridley Colborne, Mr Kenyon, Mr Fowell Buxton, Mr Estcourt (Oxford), Mr John Smith, Mr John Weyland, Lord Viscount Lowther, Mr Hope, Mr Moreton, Mr Lennard. To which were afterwards added the names of Mr Bainbridge, Sir Robert Peel, Bart., Mr Gisborne, Lord Viscount Sandon, Sir Robert Harry Inglis, Bart., Sir Henry Willoughby, Bart., and Mr Mackinnon.

CHAPTER X.

MERCY A LEADING FEATURE IN FACTORY AGITATION—PUBLIC MEETINGS
IN YORKSHIRE—COUNTY MEETING AT YORK—PROCESSION AND
PUBLIC ENTRY OF MR SADLER AND MR OASTLER INTO MANCHESTER.

NOTWITHSTANDING all the denunciations which have been uttered against unjust gains, they have found many admirers; but few have stopped to inquire the cost—to sum up how many have been made wretched that one may live in a large mansion and fare sumptuously every day. The sympathy of the multitude with an emperor on a barren rock, is creditable to them: it speaks of their perception of the vicissitudes of life; misfortune has won upon their natures, and they would compassionately relieve the oppressed; they would forgive his crimes, because of pity for his fate. Who would dare to blame them; who to regret the exercise of their mercy? Better that they should be moved to tears for one, than that their souls should become parched, and their hearts never know the sense of sympathy. “The quality of mercy is not strained; it droppeth as the gentle rain from Heaven upon the place beneath. It is twice blessed; it blesseth him that gives, and him that takes.” Mercy is in its quality the same to the one as to the many; to fallen greatness as to subdued lowliness; but, like “the gentle rain from Heaven,” its usefulness must be measured by the extent of ground on which it drops, and its blessings by the wants of the earth.

It is a feature of modern civilization that it begets within

its heart a numerous body of human beings, endowed with every natural capacity for mental and physical enjoyments, but who have throughout life no mental enjoyments, and whose animal existence is a daily returning round of physical suffering, and for whom society has no sympathy. The life of such has only a relief in sleep, and a glimmering hope in death. These unfortunate human beings are not reached by any of the pompous philanthropies, which manifest their existence in outward and visible signs, having engraven on their fronts names and dates, which, on behalf of the donors, sometimes seem to say, "pause, stranger, pause—admire my generous goodness; see what a pattern I am of what you should be." These observations may be, to men of naturally weak morality, unpleasant—men too who pride themselves upon the exactness of their views, and measure their "donations" by the figures in the subscription list of their rivals in the social scale; as the phrase has it, "respectable men," who look for a defence of all the suffering of the unfortunate in denunciations of their improvidence, and justify these by a list of the *liberal* institutions to which those self-satisfied eulogists have subscribed, without their having asked themselves whether the means to enjoy these institutions are within the reach of the majority of those for whom they are avowedly intended, or asked "What is the balance between my own efforts to relieve the wretched and the results of the practices which sustain me, in causing poverty, suffering, and crime?" Such home questionings might disturb the serenity of some who move through their duties with a mechanical regularity, enlivened with occasional manifestations of zeal for what they modestly designate "enlightened views and a liberal policy," sometimes, nay frequently, ending in social darkness and positive punishment to the majority of those whose misfortunes deserve relief, and their failings pity. It is within the moral ability of but few men to feel for misery—they have not themselves suffered—and extend mercy to those whose

misfortunes have been uniform and constant, and who consequently have not experienced the momentous changes which startle the beholder, and force the most careless to gaze on the illustrious victims of misfortune in wonder mellowed with pity. Mercy for the lowly is the spring rain of Heaven ; the agitation of the elements is sometimes necessary to prepare for its reception, to render its droppings fertilizing and the earth fruitful.

There are but few who dare to refuse a nominal acknowledgment of the blessings of mercy, or of advantages arising from the practice of moral virtues, but there is unfortunately a kind of implied contract among men, that they shall not be called upon to perform moral duties when the exercise of these would interfere with the acquisition of riches. There is consequently practised a general toleration of positive evil, under the pretext of what is designated "aknowledge of the world:" it is sceptical of the sincerity of every act which is not a source of personal gain ; it considers the expression of generous sentiment as at best "an amiable weakness;" it sneers at enthusiasm for good, and esteems self-sacrifice as akin to madness ; all its maxims and its practices are opposed to the exercise of virtue for its own sake ; all unite to harden the heart and cause the understanding to prefer property to truth, profit to justice, and selfishness to charity. So systematic is this conventional hypocrisy, that weak men, of even good intentions, are afraid to condemn it in tones louder than a confidential whisper: it is only the few whose keen sensibilities have been too strong to be subdued by the force of example ; these draw their conclusions from their own experience, become laden with a sense of the duties due from themselves to others ; they yield to the irresistible impulses of their sensitive natures, and, at all risks, break through the trammels of social usages, and boldly proclaim to the world the faith that is within them. It is to the courage and indomitable spirit of a few such men that England is indebted for the Ten Hours' Bill movement of 1831 and 1832,—a movement

in its origin and objects allied to mercy and consistent with justice.

The agitation for shortening the hours of labour in factories was renewed in the West Riding of the county of York in a period of extraordinary political excitement. The mind of the country was then firmly resolved to obtain a reform in parliament; the House of Lords, with the late Duke of Wellington at their head, seemed resolved to oppose the Reform Bill. From London to the most remote village of the three kingdoms there were political clubs. Birmingham and Nottingham threatened; the press teemed with inflammatory speeches, letters, and *leaders*. It is a feature of every such crisis not only to absorb public sympathy, but to put down all efforts intended to establish other movements. Meetings for the Ten Hours' Bill were held in rapid succession at Heckmondwike, Bradford, Huddersfield, Dewsbury, Keighley, Halifax, Leeds, Holmfirth, and many other places, and lastly at York. These meetings were numerously attended, presided over by the regularly-constituted authorities—the mayor of Leeds, the high sheriff of the county of York; in all cases by the principal local authority. At these meetings, when the then popular cry of “Reform” was raised, the response, spoken in a manner not to be misunderstood, was:—“We are here about this question of Ten Hours' labour, and will not allow it to be mixed up with any other.” The opponents of factory regulation made many efforts to drown the cry of “Ten Hours a day,” with the popular shouts of “Reform,” “No Corn laws.” These efforts signally failed, a circumstance which proves how thoroughly the desire for restricting the hours of factory labour had seated itself in the minds of the operative classes, and how resolutely resolved they were to succeed in accomplishing their object. As the movement continued, it gradually acquired importance. At the Bradford meeting,

held on December 27th, 1831, the Rev. G. S. Bull, a clergyman who to the Church of England has been a support and an ornament, joined the Ten Hours' Bill cause; then followed, at the same meeting, the adhesion of Mr Rand, an extensive millowner.

Within a brief period afterwards, the Ten Hours' Bill movement ranked amongst its foremost supporters the names of Oastler, Sadler, Col. Murgatroyd, Tempest, Wood, Bull, Pollard, Ferrand, Fielden, Rand, Condry, Fletcher, Smith, Thackerah, Hanson, Perring, Foster, Schofield, Capt. Wood, Stocks, Halliley, Kay, Pitkethly, Leach, Hall, Osborne, Cook, Tweedale, Richardson, Albutt, and many others. These names represented much talent and experience. Messrs Wood, Rand, and Fielden (head of the firm of Fielden and Brothers), were influential and successful mill-owners; Mr Condry, a literary barrister of high reputation; Mr Fletcher, an eminent surgeon in Bury, Lancashire; Mr C. Turner Thackerah, and Mr Samuel Smith, of Leeds, medical men uniting in a high degree observation, experience, and science; Mr Bull, a popular and honoured Church parson; Messrs Perring and Foster, editors of newspapers; Mr John Hanson, one of the most intelligent and able working men of Huddersfield. These "leaders" were supported by committees, consisting of the principal operatives of their districts; they were supported by the body of the beneficed clergy, by ministers of various other religious denominations, most of the respectable medical practitioners, and other influential gentlemen. All efforts at out-of-doors opposition were fruitless.

It is interesting and instructive to observe how the evils of the factory system had become apparent to the minds of the thoughtful among the various classes. By way of example, at the Leeds meeting, Mr John Marshall, jun., of the firm of

Marshall and Co., argued against parliamentary interference as a general principle, but considered that the legislature ought to protect the health of children. Mr Marshall said :

“I must confess that I cannot admit that the children in our manufactory are suffering materially in their health from the hours which we work at present.” Mr Samuel Smith answered : “Gentlemen—As one of the surgeons of the Infirmary of this town, I have had extensive opportunities of witnessing the baneful effects produced upon the health and limbs of children by too long work, and too short intervals for rest and relaxation. I have seen limbs which have been beautifully formed, in a short time, from the operation of these causes, reduced to the lowest state of deformity; and individuals who, but for these causes, would have been models of beauty and manhood, doomed to remain through life deformed dwarfs. It is now about twelve years since my attention was first directed to this subject, in consequence of seeing an unusual number of cases of deformity of the lower extremities, sent (to the Leeds Infirmary) from a neighbouring manufacturing town (Bradford). The surprise, however, at this circumstance ceased, when it was ascertained that at that period the children were worked much longer hours in the factories of that town than in this.

“The supports for bent bones, from those causes, soon after this period, became an item of such importance in the yearly expenses of the institution, that the weekly board very properly thought it their duty to pass a resolution, taking from the surgeon the power of ordering machines costing beyond a certain sum, without first obtaining the consent of the board, and we have now frequently to compound the matter, by getting the parish from which the poor patient comes to pay one-half the expense and the Infirmary the other. Mr Marshall has stated to you that

he is not aware the children in his factory suffer in their health, in consequence of the length of time they worked. I give Mr Marshall credit for being sincere in this expression. I sincerely believe that he is not aware of it, but every one to his own business—I *am aware of it*, and, accordingly, I may state, that the very last case of the kind I have alluded to which I have investigated was from that gentleman's factory. It was only on Friday afternoon last that a beautiful girl, of fifteen years of age, presented herself at my table at the Infirmary, being my admission week; she had a recommendation, signed 'Marshall and Co.' Her spine was bent into the form of the letter S. As I always wish to investigate the causes of disease, in order that I may be the better able to effect a cure, I ascertained that she had been several years at Mr Marshall's factory, that she had been worked fourteen hours a day, with what intervals do you think for rest and refreshment?—why, ten minutes for drinking, fifteen minutes for breakfast, and forty minutes for dinner. This poor girl, but for these causes, would have been as handsome a woman as there is in the town of Leeds; she must, however, now remain deformed for life. She may be seen by any one; and I hesitate not to say that it was by these causes that the deformity was produced, and I believe that the persons under whom she has worked are aware of it. I understand she was a *line-spreader*; I do not know the nature of it—but I believe it is an occupation in which only one hand is used. I find that a short time ago her occupation was changed.

“The number and the serious nature of the machinery accidents admitted into the Infirmary is quite frightful to contemplate. I feel confident the proportion of these accidents will be materially diminished by the Ten Hours' Bill, not in the proportion of the one, two, or three hours, which may

be deducted from the hours of labour, but in a much larger proportion; for I have long entertained a suspicion that many of these poor children get their fingers and hands involved in the machinery while in that state of listlessness and apathy, produced by fatigue. I have it in confession from an overlooker, that it is often necessary, towards the latter part of the day, to shake poor factory-children by the shoulders to keep them awake while standing at their work. Is it proper—is it right, that poor children who, even when standing upon their legs, cannot keep their eyes open, should be placed almost in immediate contact with all kinds of dreadful machinery, with cog wheels, and things which are emphatically called ‘ devils ! ’ ? ”

At the Bradford meeting (Dec. 27, 1831), the Rev. George Stringer Bull stated briefly the circumstances which induced him, in his capacity of a Christian clergyman, to take an interest in the factory question. Medical men, as represented by Mr Smith, of Leeds, were influenced by their experience of the effects of the factory system on the body; ministers of the Gospel, as represented by the Rev. G. S. Bull, were influenced by their sense of the effects of the factory system on mind and morals. Mr Bull, addressing the Bradford meeting, said : “ As I entered this room I heard a person ask, ‘ What have the parsons to do with it ? ’ Mr Chairman, the parsons have a great deal to do with it; and I conceive that a most fearful responsibility rests upon those ministers of the Gospel who fail to oppose all the influence they possess against anything which tends to prevent the moral improvement and religious advancement of the people. I have not been invited to take part in the proceedings of this day, but I did not need any invitation. As an inhabitant of the neighbourhood, I claim my right to deliver my sentiments upon this subject. Since I have dwelt in this part of the country, I have been frequently struck with the evils of this system. I have

noticed the many obstacles in the way of the moral and religious improvement of young persons, and the consequent moral evil entailed upon them when they become parents and heads of families, and their children after them, has caused me to experience pain every day of my life. Now, sir, I happen to be connected with about five hundred Sunday scholars in our district, and I assure you I feel my very heart smart within me when I am scolding these poor little children for coming too late to school, and consider the amount of labour exacted from them during the week. It is not at all extraordinary that they should take an extra nap on Sunday morning, when they have been compelled to get up at five o'clock, and sometimes earlier, on the other days of the week ; and though I have felt it a matter of duty to scold them for coming late to school, I have thought within myself that somebody else was to blame besides them. And if, after they have been stoved up during the week, we stove them up in the Sunday schools, where are they to get a breath of fresh air, or anything that will administer to health ? They cannot find it in the mills, nor when they have been to their work in the morning ; they cannot find it when returning home at night, after a fatiguing day's labour, exposed to rain and the inclemency of the weather. It is impossible they can find it in the mills six days in the week, nor on the seventh in our Sunday schools, for, you know, our school-rooms are crowded to excess. Then, where are they to get a single draught of health, and where are they to obtain anything like moral improvement ? It is said that some of the most strenuous supporters of Sunday schools are to be found amongst those who employ the children. I acknowledge that it is so ; but I would ask those gentlemen, what can we do for the instruction of these children on the Lord's day ?—that is, perhaps, two or three hours, for by the time the names are called over, the absentees inquired after, and the other little matters arranged, pray what time is left to teach them

A B C? Besides, what business have you to teach them A B C on Sundays? They ought to learn that on the week days, and a great deal more besides, and be exercised in purely religious instruction on Sundays. I consider it a sort of desecration of the Lord's day; and that it is not warranted without the most rigorous necessity. I trust we shall give impartial attention to the arguments which may be advanced to-day, and not suffer our feelings to warp our judgment in any part of this discussion. With regard to the gentlemen who are exerting themselves in promoting the emancipation of these poor children—of Mr Sadler I can say, and I am most conscientiously speaking when I state that in all our private communications this has been the subject, ever since I knew him in 1823, that has laid nearest his heart. The first time I ever saw him was in Hull: we happened to talk upon Sunday schools, and he called my attention to the very system we are now met to consider, and he denounced it with all those feelings which a man of humanity and consideration would do. I do declare, without any reference to political partialities, but most conscientiously, and upon the word of a Christian, that I believe the poor of this country have not a more firm and unflinching friend than Michael Thomas Sadler." The interest which working men felt in the question, and the importance of the facts they stated, may be judged by the following observations spoken at the Huddersfield meeting (Dec. 26, 1831), Mr George Beaumont said: "Mr Chairman, I should wish to make one or two observations. I went into a factory at seven years of age, and worked till I was fourteen, and I worked from six in the morning till eight in the evening, with only forty minutes' intermission. I had my meals brought into the work-room, and after biting once I followed my work at the machine, but before I could bite again I had to pick the lint off. And what has been the result? Look at me now. (*Mr Beaumont alluded to his diminutive stature.*) At that manufactory it was usual to

keep a tally in the rooms, so that if there were two hundred persons in one apartment, only one person was allowed to go out at a time. But these are only part of the evils which these little sufferers have to endure. Look at the time they have to go to the mills, and the risks they have to brave. I have assisted in carrying a little sister, not six years old, to the mill, at six o'clock in the morning, through frost and snow ; and I have seen an instance of a boy, who had not been a quarter of an hour in the mill, being caught by a strap, dragged into the machinery, and his head severed from his body. I say, further, that those who advocate the abolition of colonial slavery ought not to be considered as sincere unless they advocate the extinction of slavery in factories. If ten hours a day be the utmost extent allowed by law for culprits or transports to labour, should children be worked fourteen or sixteen hours a day, merely because their parents are poor ? A factory in this town, last week, worked from six in the morning to nine at night, with only an hour for meals."

The Yorkshire meetings were addressed at great length by Mr Oastler. At Huddersfield (Dec. 26, 1831), he spoke as follows :—

"Gentlemen, you shall have no party politics from me, 'but ten hours for five days and eight for Saturdays.' I feel most happy to meet you upon that question, and upon that question I shall always be ready to join you with heart and hand. If we differ about other things, let us take care that we do not lose *that point* ; let it be our care to relieve our children from the slavery under which they now labour, and can scarcely be said to exist. Let no feelings of animosity, as politicians, ever interfere in that question ; but let us be resolved, as Tories, as radicals, as whigs, to join hand and heart till British infants are free. I beg leave to congratulate you, Mr Chairman, upon your having been the first proper officer of his Majesty to constitute a regularly-organised meeting for considering the propriety of making infants free, and I feel happy

that I have lived to take part in such a meeting as this, and I rejoice exceedingly that the silvery notes of a Minister of the Gospel have been heard amongst us; having been born, as my friend Mr Baines has told you, of a very benevolent parent, and having been for many years in the habit of attending and supporting benevolent institutions. I have been an old soldier in the cause of negro emancipation, although, since I began to write and talk against 'Yorkshire Slavery,' my enemies, or rather the enemies of the children, have had the audacity to say that I did it for the purpose of withdrawing the attention of Englishmen from negro thralldom. I will yield to no man in hatred of slavery. When I was a youth, and when the name of Wilberforce was hissed at for political purposes, though only in my teens, I undertook a paper war for him, and fought as manfully against his opponents as I now fight against the opponents of the freedom of infants. Some persons have said to me, 'What business is it of yours? What have you to do with factories? You have got a good place up at Fixby, yonder; *you* are right, be thankful.' My answer was this, 'I am one of the human race; and I see these infants in misery, and so long as I live will I exert my powers to relieve them from their bondage.' Yes, yes, I know that the God who made me, never made a human being to be miserable; I know that it is the design of the Divine Being that all the sons and daughters of Adam should be happy. Do I then say that there should be no grades in society; that there are not to be servants and masters? No; but I do say that servitude and labour ought not to be oppressive. I know from my own experience, for I am but a servant, that I have as much pleasure in serving my master, as my master can have in receiving my services. No master has a right to demand the services of any human being unless the reward of those services will be a comfortable living, and that is, I verily believe, all the working classes want. But I have been charged with being an enemy to the

factory-masters. Those who have said so do not know me; nor do they know the factory-masters. Let me set you right upon that point; I know more about it than you do, but I will tell you nothing but truth. I hold in my hand some letters from factory-masters, not many miles distant from my own house, and I will read them to you in order that I may set the question right between yourselves and your employers. That man, in my opinion, does the poor most good who corrects them if mistaken with regard to the character of those who employ them. Providence has placed me in a situation between the infants and their masters, and that very position has made me the medium of their information: I have in my hand a letter from one of the principal millowners in the West Riding of the County of York, and he is a Radical. He says, 'I admire, exceedingly, your labours to effect an amelioration in the condition of children employed in factories; you have my hearty good wishes for your success, but you have a mass of stupidity to struggle with. I wish the humanity of some of the friends of liberal measures were not so diffusive, nor of so itinerant a character, that it might become a little more localised, and that it might be allowed to visit our *own neighbourhood*.' So says the Radical. I will give you a short but comprehensive extract of a letter from another large factory-holder, who is a Whig, for I have them from all sorts. He says, 'How can I assist you in the cause of the factory children? You may command my best energies.' Now, there's for you! What could he say more? Well done Mr Whig millowner. I have not done yet, gentlemen. I hold in my hand a communication from a Tory millowner. He thus concludes his letter, in which he has authorised me to give money to committees in case they cannot raise sufficient themselves. I have not yet had occasion to give any; though I lent some the other day, but they would not keep it, because they

said they could get enough in their own town, and would repay me. But what says the Tory gentleman? You shall hear; ‘Let us all pray, as with one mind, to God, that he may be pleased to bless us by allowing us to have the wish of our hearts gratified.’ This is in one letter, and he concludes another in a somewhat similar manner—‘And with my sincere prayer that we may be the honoured instruments in the hands of God to diminish this worst of all slavery, I am, &c.’ Now these are letters I have received from three of the most respectable and three of the largest millowners in the West Riding of Yorkshire, radical, whig, and tory though they be. Believe it not, then, that Richard Oastler is an enemy to the factory-masters, for they it is that are enabling him to stand against all the rebuffs and abuse of his opponents. And I will tell you more—I was supported by these three men before I knew that a single operative had taken the field. Let it then be understood that the cause stands better than it did. They are not all against you. I said at Leeds, and I believed it, and I believe it now, that three-fourths of the manufacturers of the West Riding of the County of York are with me upon this question. But it is stated in a Saturday paper that that is not credited. Be it so. What will it prove? That ‘the greatest enemy the factory-masters are said to have’ has too good an opinion of them. I firmly believe I am correct, though I know that in certain quarters great efforts are making to destroy the effect. I should now like to talk to you a little about the factory system; I have said enough about myself. It was a factory-master that first called my attention to it. I had often heard of the evils in factories, but I take shame to myself that I did not examine into them sooner; it was a factory-master who asked me to come forward because I had a bold heart and feared nobody. I gave him my word that I would not rest till I had conquered, or sunk into my grave; and I never will. Gentlemen, I am old enough to remember that there were thousands of

respectable domestic manufacturers worth their 50*l.*, or 100*l.*, or 200*l.*, who were able to make their cloth at home and go to sell it in the market; but they are now reduced almost to pauperism, or to the class of common labourers. They were the best masters the workmen ever had—these were the strongest bulwarks of the state—but they are now mixed amongst the paupers and labourers in one common mass. I remember the time when there were happy companies upon the village green, as blithesome and as gay as lambs, and I have gambolled with them—but they are now all gone and disappeared; we see nothing of the sort now! We scarcely see the complexion of a boy or girl in a country place, but they are black, blue, or brown. I remember the time when it was not so, but now they are locked up the live-long day in a loathsome factory; and when I know that the Almighty Creator of the Universe never intended them to be sent there, I feel that I am doing the work of God when I require the doors to be opened, and that these little ones should once more see the rising and setting of the sun. It is, in my opinion, the factory system which has caused a great deal of the distress at the present time—a great deal of the immorality at the present time—a great deal of the weakness of men's constitutions at the present time. It is, then, against that baneful system I have lifted up my arm, and I ask you, not to help me to pull it down, but to correct its errors, and to keep it from falling. When I contemplate the life of a factory-child, my heart is filled with horror to think that human nature is so corrupt that any individual, calling himself a man, would live a day under that load of guilt which he ought to feel as a man who is causing such dreadful misery. Take a little child, for it is in units we must deal; the whole mass of factory woes would cloud your understandings and make you like myself, as I have by my opponents been described—'mad.' Take, then, a little captive, and I will not picture 'fiction' to you, but I will

tell you what I have seen. Take a little female captive, six or seven years old; she shall rise from her bed at four in the morning of a cold winter's day; but before she rises she wakes perhaps half-a dozen times, and says, 'Father is it time? Father is it time?' And at last when she gets up she feels about in the dark for her clothes, and puts her little bits of rags upon her weary limbs—wearied with the last day's work; she leaves her parents in their bed, their labour (if they have any) is not required so early; she trudges onward all alone through rain and snow, and mire and darkness, to the mill, perhaps two miles, or at least one mile; and there for thirteen, fourteen, fifteen, sixteen, seventeen, or even eighteen hours is she obliged to work, with only thirty minutes interval for meals and play!! Homewards again at night she would go, all in the dark and wet, when she was able, but many a time she hid herself in the wool in the mill, as she had not strength to go. The girl I am speaking of died; but she dragged on that dreadful existence for several years. But this is not an isolated case. I wish it were. I could not bring you hundreds of such cases exactly, because I have mentioned eighteen hours, but if I had said sixteen hours, I could have brought hundreds. And if the little dear were one moment behind the appointed time; if 'the Bell' had ceased to ring when she arrived, with trembling, shivering, weary limbs, at the factory door, there stood a monster in human form before her, and as she passed he lashed her!! (*Here Mr Oastler struck the front of the platform with a long heavy strap.*) This (holding up the 'strap') is no '*fiction*.' It was hard at work in this town last week, and I have seen the effects of such instruments in black marks from the neck to the seat of children. This system ought to be exposed, to be corrected. What I am going to tell you is a fact, and it was committed in Christendom. A little boy ran away, for about three-quarters of an hour, out of a factory, and when he returned

he was taken into a room by the overlooker, a quantity of tow was tied over his mouth, and he was stripped and flogged with a hazel stick till every bit of the skin was flayed off from the back of his head to the bottom of his back, and so tight had the tow been tied round his head, the black marks occasioned thereby remained many days. For weeks the poor sufferer was unable to go to his work. Had he been my child he should have gone to his grave rather than to such a place of torture. This was not done in the West Indies, neither was it done in this immediate neighbourhood; this horrifying case of cruelty occurred, however, not very many miles from this place. And should I be called 'mad' because I endeavoured to expose this system? I think there are many men more mad than I am who have not joined hand and heart in the cause years and years ago. I am glad, however, that we have got a public meeting on the subject; I am glad we have got friend Booth (the chairman) to lead the van. I trust we shall crush the anti-christian, anti-social system, and that children will be allowed to leave their work when they have been employed ten hours. It was my intention to have adverted to the general effects of this system, but that has been done already. Allow me, however, to occupy your time a few moments while I take notice of the remarks in last Saturday's paper respecting the working of children eleven hours a day. The question now occupies a very different position from what it did when Sir John Hobhouse's bill was introduced. Then the workmen asked for a limitation to twelve hours a day, and a great many persons opposed it, and now you have found many of them are opposed to a ten hours' bill. And how? By proposing one for eleven hours! I want you to be careful on this point, for I am positively sure that an eleven hours' bill means *no bill at all*. They tell you that if you get a ten hours' bill you will petition for it to be done away with next year. They say also that you will have lower wages. I do not think they know what you will have; it is speculation; but I will tell you

I think you will have better wages, and I think the manufacturers will have better profits, and the shopkeepers better customers, and all will go on well. The reason why I think you will have better wages is, the market of labour will be more circumscribed, and therefore you will have it more within your own power. Now, the labour of children is co-extensive with your own, it may be demanded for the whole twenty-four hours; but if it were less, you would both get better wages; and a manufacturer told me, for I have it all from them, that they will get a better profit out of your better wages, and when you get more money, you will be better customers to the shopkeeper. I am absolutely shocked that Christians who are very anxious to do away with slavery in the West Indies can endeavour to bribe the worst feelings in parents to sell the labour of children for a shilling a week extra, and to lend their support to an eleven hours' bill. What is the most debasing principle of human nature, nurtured by 'African Slavery?' That a parent is so dreadfully demoralized as to sell his child for gold!! Yes, this is the most hateful part of that most hateful system! And I remember to have seen those very persons hold up to execration an African father or mother, because they would sell their child, who are now asking you to do what is the very same in principle, namely, to consign your child to excessive labour, under the idea of receiving more money for the same. It is the system of slavery in factories which destroys all parental feeling, and they think that it has gone on so far that you are now so unfeeling as to support the cruel oppression of your children from the hope of receiving more wages; but I hope that you will tell them, if your children do run the risk of getting less wages, they shall not any longer be slaves. It now becomes my duty to beg for these poor slaves. You know these things can't be done without money. I have spent a little; but we think the people of Huddersfield would like to put their mites into this Gospel Treasury of our Lord. It is the intention of

the Committee to go round from house to house, to collect subscriptions to support a delegate to London, in order that the poor children may not be trampled on by forty delegates from other places. Let me remind every person who may be afraid that other institutions will suffer from this, that the tree of benevolence has taken deep root and is widely spreading; water it well then at the roots, and it will still spread more luxuriantly, until it cover the whole earth. If the factory system were corrected and its mischiefs curtailed, I believe that England would outstrip all her former doings, and become the guardian angel of the world—which, that she may be, is my most earnest wish and desire.”

Mr Oastler’s speech at Huddersfield possesses a historical and social interest; he described what he himself had seen of the social condition of the manufacturing population of Yorkshire before the introduction of the centralised, unregulated factory system. The annexed extract will, however, better enable the reader to judge of the force of the words which, when spoken in the ears of Englishmen, aroused them to a sense of their wrongs and duties :—

Mr Oastler, while addressing a crowded meeting at Keighley (Jan. 30th, 1832), said :

“ What ! shall that being which nature in its infancy has made perfectly helpless, with all its sinews and fibres as weak as possible, shall that being be compelled by the hand of avarice, and the hand of tyranny, to be worked to death before it arrives at maturity, although we farmers, for our own sakes, take care of our horses when young in order that we may work them to our profit when they are old ? What ! shall those individuals who entertain the horrid Malthusian doctrine, and suppose that the Creator sends beings into the world without being able to provide food for them, shall they lay their savage paws upon them and work them to death, calling them redundant and superfluous ? In the name of Christianity, in the name of Britain, I say ‘ No,’ and I hope that very shortly

we shall hear the same negative responded from St Stephen's. Yes, I have no doubt when our legislators are informed of the actual evils which exist, when they perceive how the factory system demoralises and debases society, notwithstanding that an interested faction may go up to London to oppose us, our legislators will assert that it ought no longer to be tolerated, and declare that the children shall hereafter be protected by the law of the land, and that they shall be sealed from slavery by the seal of the King of England. But supposing, gentlemen, that their health were not injured, are they brutes? No, no. If they had been whelped by the lioness, no man dare have seized them to oppress them. She would have risen in all her mighty power and bade defiance to the oppressor of her young. And think you not that English Christian mothers feel as fondly for their young as the lioness? Ah, yes, they do, yet they have not the power of the lioness, but in solitude and confinement are condemned to mourn over the helpless fate of their offspring, and it is on that account they now take a part in our meeting, while we are attempting that which the order of society prevents them from doing—publicly pleading the cause of their infant children. But, as I said, if they were brutes the tyrant dare not seize them. They are not brutes. The whole of these little ones which it pleases Almighty God of his infinite mercy to commit to your care, fathers and mothers, have to perform their duties in this world as members of society, and members of social government. Yes, they have to be taught that they themselves must learn to be good; and how can they learn the principles of morality, when, from the dawning of the morning almost to the midnight hour, they are shut up in the fumes of a factory, engaged in twisting, and twining, and joining together threads, as though that were the only duty for which they were created into the world? I say this, that we ought to assert that it is improper that a child in its youth should work longer than ten hours a day, if it is expected that that child shall be

a good subject under the Government. The law of the land expects us all, even the factory children, to understand our duty as good subjects when we arrive at full age; but how in the name of common sense can a young factory child, that is torn from its bed in a morning, and goes home to bed with aching legs at night, and too often cannot reach it, but slumbers on its way, how is it possible such a child can know the law which is made for its own government? It is absolutely impossible. But, gentlemen, these little children are not brutes; they have not only to learn their duty to man, they have not only to live upon the earth a few years, but there is a wide extending eternity opening before them, and we know, as Christians, that in that eternity they must occupy either a place of misery or a place of happiness. They have to learn their duty to God; and if it be impossible that they should be able to learn their duty to man, it is absolutely impossible that they should learn their duty to God. Then, woe be to that man, wherever he is and whoever he is, who, in the search of gain, prevents those employed under him from having the opportunity of preparing to meet their God. Woe be to him, whether he be rich or whether he be poor. There is a dread responsibility attaches to every human being who employs little children under such circumstances, for which he will have to account at the day of judgment; and although some of their employers may laugh at us for saying so now, the day will come when they will tremble. Yes, my friends, these little children are brought into the world thus to perform their duty; but how does this horrid system prevent them? The moment a child is able to creep from its mother's lap, almost—for I have known them taken at six years old—and from morning till night, from week to week, and from year to year, if their health permit, are they compelled to labour and toil. And is this a state of things that can be approved of by any person calling himself a Briton or a Christian? Is this really what

was intended for an immortal soul that is put into the casket of a beautiful child? Is it thus that children should be led to Jesus, who said ‘Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven?’ Oh, no, benevolence has endeavoured, but in vain, to make up for the evils that the factory system has brought upon our juvenile population. Benevolent individuals, who have seen how morally impossible it is for children under the factory system, as it is now and has been for some time practised, to be educated properly, have designed, superintended, and promoted Sunday schools. Benevolence has waited upon the children, and has been compelled against its better feeling to make that day which every Christian acknowledges to be a sabbath and day of rest, into another day of labour for the children, and of labour for the teachers. Think not that I am speaking against Sunday schools. No; I am endeavouring to uphold the individuals who have promoted them, and who have spent their days in endeavouring to teach children that which in my conscience I believe they have a right to be taught on the week day. Yes, yes, benevolence has endeavoured, but as I before said has endeavoured in vain, to make up for the dreadful evils which this horrid system produces. You see your infirmaries erected by kind and benevolent individuals, and in those places where factories predominate you will find them occupied, in a majority of cases, by persons who have received their diseases from the factory system. Within a very few years, benevolence, finding that still the avaricious and haughty tyrant seized its prey, and rendered it incapable of receiving instructions on the sabbath—for I know many that are prevented, being compelled by the fatigue of the week’s labour to spend their Sundays in bed—benevolence has designed another plan; *infant schools* have been established, in order that they may receive some little instruction before they are consigned to the demon of the factory system; and so avaricious, so malignant,

so blood-thirsty — I mean of the blood of their souls — have some factory-masters become, that they have given this as a reason in a petition to the House of Commons why children eight years old ought not to be protected. Seeing, then, that benevolence, with its outstretched arm, has been overmatched, and that the abettors of the factory system have determined to make it only subservient to their own interests, is it not high time that Britons should speak out, and that at all events those who are not blinded by this accursed system should raise their voices and petition loudly, and frequently, and continually, that British children may be free. I say it is high time.”

These speeches were spoken in the presence of those who were capable of judging of the truth of every fact stated; in this consisted their principal value, for the factory system, as then existing, was attacked in the stronghold of its supporters.

The exuberant fulness of Mr Oastler's sympathies, his disregard for personal consequences, and his strong hatred of oppression, have sometimes caused him in public controversy to use expressions which, to others less moved and more under the control of conventional propriety, have appeared extreme. These expressions Mr Oastler's opponents have not failed to make the most of; in council no man is more calm and careful, in action he is dauntless and brave. No words can equal his own, published in 1850, as a description of his state of mind in the early stages of the factory movement, as begun by himself:—“Those who blame me,” said Mr Oastler, “for having been violent in this cause, should consider the deep, the solemn, the overwhelming conviction, on my mind, of its vast importance; they should never forget that there were external circumstances surrounding me, calculated to awaken my sympathies and to arouse my indignation. I saw my young and helpless neighbours dying excruciatingly by inches under the lash and toil of the factory monster; I heard their groans, I watched their tears; I knew they had relied on me, they

told me so. I was visited by their weeping mothers, who, sorrowing, showed me their children's bleeding wounds, and in accents which such mothers alone could speak, asked : 'Is this fair, sir? Is it not enough that these poor things should be killed by labour, while doomed to earn our bread; and *must* they also be kicked, and lashed, and struck in this fashion?' Then, gazing in maddened anguish, and lifting their tearful eyes to heaven, they have said: 'There is a God, and he will recompense.' I saw full-grown athletic men, whose only labour was to carry their little ones to the mill long before the sun was risen, and bring them home at night long after he had set. I heard the curses of these broken-hearted fathers! They were loud and deep, but registered—never to be forgotten.

"To have been cool, calm, and unmoved, when surrounded by such circumstances, would have required a colder heart than mine; to have expected me to address, in drawing-room language, the oppressors of the helpless, men whose whole souls were absorbed in the one thought of coining gold out of tears and suffering, would have been to have supposed me something more, or something less, than a man."

There was between Mr Oastler and his hearers a bond of sympathy; he appealed to the love they bore their offspring, to the sense of the degradation they endured; he warmed within them the consciousness of duty, the responsibility thereto attached; he awakened their hope by pledging himself to secure their release, or, perish in the attempt; he strengthened their patriotism by exhorting them to care for their country as became Englishmen; he entreated them, for mercy's sake, to grant unto him their approval and support. Who could deny the facts stated by Mr Smith, of Leeds, by the Rev. Mr Bull, by the factory operatives, of what they themselves had endured? Those who eagerly listened, carried with them to their own homes the glad tidings that sincere and bold men were pledged to secure the emancipation of little children from the slavery in the mills. Yorkshire, through the force of such speeches as

have been quoted, and the aid of the printing press, was excited through controversy; and the operatives, being hopeful, were full of enthusiasm. The question was a home one, felt and known by all who suffered; they, in the simplicity of their hearts, had not their virtuous resolutions deadened by the chill damp of economical theories. These were the weapons of the opponents of factory legislation.

The Yorkshire meetings had features peculiarly their own. The tears, the smiles, the songs, the vows of the women and children, the sense of indignation which now and again shot from the eyes of *all* when the nobler feelings of their hearts were appealed to, will, by those who witnessed those scenes, never be forgotten. As the cruelties endured were named, women, men, and children wept; as hope was appealed to, they cheered; the children and girls, in shrill notes, sang their simple chaunt,—“We will have the Ten Hours’ Bill, that we will.” Here and there, a mother clasping an infant to her breast, kissing it, and exclaiming: “Factory slave thou shalt never be,” gave to the proceedings a dramatic interest, remarkable, intense, and exciting.

There has not been held, in the whole course of English agitations, a more remarkable gathering than that which met in the Castle Yard of York, on April 24, 1832, to demonstrate to Parliament that Yorkshire was in earnest for a Ten Hours’ Bill. The nearest factory town to York was Leeds, a distance of twenty-four miles; many of the outlying districts were from forty to fifty miles from the place of meeting. The air was cold, the rain during the previous night fell in torrents, the weather was described in the Castle Yard to be “the most inclement within memory.” Leeds, Bradford, Bingley, Keighley, Dewsbury, Heckmondwike, Batley, Huddersfield, Honley, Holmfirth, Marsden, Meltham, Elland, Hebdenbridge, Pudsey, Rawden, Otley, and other towns and villages were that day represented in the Castle Yard. Thousands of men foot-sore, but not faint of heart, who had walked from twenty-four to

fifty miles, blessed God when their eyes that morning saw York Minster. Not only men, but factory boys and girls, mothers with infants in their arms, fifty miles from their own homes, were there to hold up their hands to heaven as an earnest of their desire to be freed from a worse than an Egyptian bondage. It was a sight to have made a man love his kind ; to have seen how the stronger helped the weaker along the road to York, and from York home again ; to mark them share each others' food, to behold the noble spirit of self-sacrifice which made those in front wait for and often return to help onward those in the rear. Oastler and Bull were everywhere cheering and encouraging the straggling bands. Fatigue, hunger, and thirst, were borne with courage and self-denial ; property of all kinds was safe as if all had been in their own parishes. The meeting was most numerously attended, the Castle Yard, which was then of very large area, having been three parts full. The estimated numbers varied, all admitted there were many thousands. We are indebted to a friend for a personal narrative of this most interesting assemblage ; his recital contains points of special interest, which could not be ascertained from the usual sources of information. The author of the narrative was a zealous supporter of the factory movement, and wrote with all the warmth of an earnest man. He published his description of the York meeting shortly after its occurrence, and when the incidents were fresh in his memory. He was assisted by facts communicated by several friends, who described what they saw. The whole comes therefore stamped with authority, and we shall quote freely from the account so rendered.

“ A numerously signed Requisition had been accepted by the High Sheriff of Yorkshire for a County Meeting on the Factory Bill.

“ The largest and most populous county in England was, by the far-famed Reform Bill, partitioned into North, East, and West Divisions. In its undivided state it was a little

kingdom of itself, and its public gatherings were often noble exhibitions of old English feeling.

“We were starting for York. The West Riding was up for one grand effort in favour of the *White Slave’s* emancipation, and every village, town, and hamlet in the province, at all contiguous to the manufacturing districts, was in a stir. It was not the war-whoop of revenge that rent the air, but it was the loud voice of parental sympathy, and of Christian solicitude for the lives, the morals, and the domestic as well as religious and educational rights of the poor and honest workers of Yorkshire. ‘For God and our Children’ was the motto on many a rude and homely banner, that was floating out of the windows of the manufacturing towns and hamlets of the crowded West—‘To York! to York!’ was the word; and the resistless ‘King Richard’ Oastler had issued his manifesto requiring all his subjects to attend.

“The preparations for this great gathering were on a splendid scale. It was a great undertaking to conduct so many thousands to York.

“Let the people of the more favoured and quieter counties, where the tall murky chimney was never seen, and the ‘many-windowed pile,’ so feelingly described by Wordsworth, rears not the roof beneath which infancy and childhood have so long groaned under the direst slavery that ever defiled the earth—let the quiet farmers and shopkeepers of the non-manufacturing counties imagine a vast population, chiefly lying at an average of thirty-five miles at least from the county town, resolving upon a *Pilgrimage of mercy* to liberate their own children from the thralldom they had long endured unpitied because unknown.

“The preparations for this meeting alarmed even Mammon himself. His votaries dreamed of, and cried ‘Treasons, stratagems. and spoils.’ York would be sacked—the farmers on their way would be plundered—their ricks fired—their

flocks slaughtered, and then, what waste of time!—the factories must be stopped, for even children and young persons resolved to go—women were determined to be at the place of concourse—and such was the stir among the ‘monied interest’ that a great talk was heard of an application to the Executive to forbid the meeting. But the High Sheriff’s precept was now out—he had accepted as security the word of ‘King Richard’ that the King’s peace should not be broken; and a powerful impetus had been given to the Christian and humane feeling of the county.

“In some villages and scattered patches of houses, contributions of bread and other provisions were amply raised by the poor for the pilgrims—but the great want of all was, shoes. These were lent; and whilst some had the ill-fitting and grotesque coats of their neighbours, others were content with a portion of a well-greased wool sheet: and at the appointed hour, which varied as the distance might be, the confluent streams of animated beings began to move.

“Leeds was the first halt. On the evening before the meeting, Leeds was crowded with the people (young and old) of Dewsbury, Bradford, Halifax, Birstal, and Huddersfield, and far beyond these and their numerous surrounding townships—of Keighley and Sutton—of Holmfirth, and even Chapel le Firth on the bare moors—in fact from that range of hills rising in Derbyshire, and running down into Scotland’s border, called ‘the back bone of England,’ to the centre of the city of the North, the swarming thousands poured down on that occasion. Their progress was peaceable, and in every way orderly.

“Large masses went on in rustic order, singing Jehovah’s praises, and imploring, in verse perhaps rudely composed for the occasion, His never-failing compassion for themselves and their little ones.

“ As a sample of these productions of the poetic rangers of our Northern moors and hills, the following (from the pen of a hand-loom weaver) may be given, which was composed on that occasion.

“ ‘How wretched is thy fate—to be
 Shut up in early years,
 From light, and life, and liberty,
 And all that life endears.
 No moral lesson taught to learn,
 Thy manners all defiled,
 Thou still must pass unheeded on,
Poor little Factory Child.

“ ‘No pure domestic bliss is thine,
 Which others seem to share ;
 ’Tis thine to labour—or to pine
 ’Mid want, distress, and care :
 Thou’st no protection from the great—
 Thou must be reconcil’d
 To pass thy days unheeded on,
Poor little Factory Child.

“ ‘No youthful pastimes are thy lot,
 Which youthful minds require ;
 Thou liv’st and linger’st on the spot,
 Which quenches all thy fire :
 Thy bosom never felt the sweets
 Of treatment kind and mild ;
 But hard fatigue and harsh commands,
Poor little Factory Child.

“ ‘Thy future years will bear the gloom
 Thy tender age has known ;
 Restriction wears the mental bloom—
 Confinement keeps it down.
 Thy body, too, alike must feel
 The ills upon it piled—
 Thou still must pass unheeded on,
Poor little Factory Child.’

“ The banners were in many cases very strikingly expressive. Most of them had a Scriptural phrase or allusion. Some were painted by the rude artist to represent the

‘horrors’ of the mill system—such as a father carrying his little girl through a pelting storm of sleet and snow to a noted flax mill near Leeds, at five in the morning, himself in tatters, and having taken off his own remnant of what was once a coat, to cover his hapless babe, who was doomed to earn its parent’s living, as well as its own, at the certain destruction of its own health and morals, and probably its very life—doomed to lie in a premature grave.

“Others had inscribed ‘Father, is it time?’ a cry which is often heard the night through in the crowded and wretched dormitory of the factory working-people, and which little children, more asleep than awake (dreading the consequences of being late), were often heard to utter.

“In reference to this, one incident in particular had about then become generally known, which made this motto on the banners of the York pilgrims very heart-stirring. A little white slave, whose weary labours were kindly consummated by the friendly hand of death—who had been used to work incredibly long hours, and was now stretched upon the bed from whence she rose no more—in the last struggle of nature waking from one of those interrupted slumbers that often precede the last pang of death, as her fond parents stood watching with many tears the exit of the worn-out infant slave to her long home, she (so true yet so outraged was nature) suddenly started from this closing sleep, and exclaiming ‘Father, is it time?’ sunk back into that father’s arms, and escaped to where tyranny could not reach her.

“We have stated, that these advocates of their own cause and their children’s first rested at Leeds.

“Warehouses were there provided for each party that came in, and a good litter of straw ‘long feathers’ was spread for them to lie upon, until, after a few hours’ rest, they should resume their work. For such as had need, some bread was provided, at these stations, and a limited quantity of beer. The masses moved out of Leeds all that tempestuous night.

Many could not proceed in consequence of the weather, thousands proceeded, mostly on foot, but some in carts and waggons, which they provided for themselves. The next station of the *Pilgrims* was *Cross Roads*, on a Heath, half way between Leeds and York.

“Here a little refreshment awaited them, and then ‘Onward’ was the cry. But a darker night never shrouded the sky.

“The appearance of the road was novel and impressive; it resounded with cheers, which were uttered by the *Pilgrims* at those who passed them in carriages of various sorts. In some groups there were torches, composed of old ropes, and the undulations of the road afforded many views of illuminated groups, successively rising over the hills and disappearing the next instant, leaving a loud, long cheer behind, as they sank out of view. It was indeed a moving scene.

“With the early dawn, the Race-course at York began to teem with multitudes. The Grand Stand was the rendezvous. There, the poor fellows were promised a little cheer, (who had need and were unprovided), of the plainest sort—bread, cheese, and small beer. And here the hand of Providence is to be admired! By some accident the bread had been mis-sent to another place—It was by many believed to have been a foul plot to cause disaster—the beer was there without the bread, and the hungry and the drenched to the skin were there, disappointment and anger were there; but for a good Providence and the magnanimity of ‘King Richard,’ there might have been havoc that day.

“Oastler soon heard of the sad dilemma, and no sooner heard, than, with quick and steady step, he was met by one of his warmest friends, then just arrived, pacing toward the Grand Stand. Arriving there, he was greeted with ‘a three times three’ that rent the air. His own account, (in a letter to a friend), of that critical moment is this:

“When I left the George Inn, to meet the hungry and exasperated people, I saw John Wood, (a principal mill-owner at that time, and a liberal friend of the factory bill), who asked me, “Well, how are you getting on?” I knew that his nerves would not bear the shock, so I said, “Oh, cleverly; I am going to Knavesmire to lead the people to the meeting.” Near Micklegate Bar, I met my own parson—parson Bull. I told him all about it, “that I expected the people would be so enraged that they would murder me; but my duty called me, and, at all hazards, I must do my best to quiet them.” He, like a brave fellow as he is—(he is both good and brave)—pressed me “to allow him to accompany me and share my fate.” “No,” said I, “my friend, when they have killed me, they will rush to the city for bread and revenge, and you must remain here, meet them at the Bar, and try to appease them. May-be, they will kill you also, but we must do our duty, and leave the event with God.” “I will obey your orders,” cried Bull, “and the Lord be with you.”

“In a short time I was in sight of the crowd, on Knavesmire. I commended myself to God—and advanced. Judge of my surprise when I saw them, they did not rush on me in anger as I expected—my faithful friend, Pitkethly, was striving to appease them—he soon saw me, and shouting, “the King, the King!” he cleared a passage for me to the centre of the assembled multitude. I mounted a table, and, as soon as I spoke, they cheered most lustily. I said a few words to console and animate them, and then marched off to the Castle Yard—thanking God, who had thus preserved my life, and given me the hearts of “my people.” Poor lads! they were hungry, but how patient.’

“Arrived in the Castle Yard, and orderly arranged, to the number of many thousands, around the hustings, the business proceeded. They had walked through a tempest many weary miles—they were generally *drenched* to the skin, they had now

to stand about five hours, whilst the various speakers stated to the undivided county of York, duly convened and assembled, the object of the meeting, and the merits of the case to be discussed.

“The writer of this imperfect sketch saw numbers, whose footsteps were traced in their own blood *into* the Castle Yard, and *out of it* homewards, occasioned by the length and wetness of the journey, and the badness of their shoes and *clogs*, in which many had walked from thirty to forty, and some fifty miles.

“That meeting was an impressive one, and was so felt. Many good English yeomen were there. Though the meeting was principally composed of the ‘mill-hands,’ they were not without much sympathy from the honest farmers and rural gentry of the county.

“The clergy too felt their case; they were headed by the benevolent John Graham, Rector of St Saviour’s, York. Some other clergymen of York were there—several clergymen from the West Riding were present, and forcibly advocated the cause of their suffering flocks. The Rev. J. C. Boddington, of Horton, near Bradford, made a most forcible appeal, and gave plain facts and arguments in favour of a Ten Hours’ Bill. The Rev. George S. Bull was at his post, and in short, but expressive terms, recorded his claims, as pastor of his flock, for legislative protection. Captain Wood, of Sandal, was urgent for the bill, and the Honourable William Duncombe, who had been a successful candidate in that yard for the suffrage of the county, now did his duty nobly, and spoke out in honest Christian eloquence, for the children of the oppressed, from whose cause he never flinched.

“And ‘King Richard’ was there, moving his audience into tears, into ecstasy, and into the firmness of immovable determination by his eloquence. And there was Sadler, beyond all the rest—he on whose most worthy shoulders the burden and heat of the work had so lately fallen.

“Much enfeebled and exhausted in body, his spirit bounded over all the snares and stumbling-blocks of the enemies of humanity, his close and fervent arguments put all their sophistry to the blush; and he that day, and many days before and after it, proved that he was a special instrument in God's hand to break the hateful yoke from the necks of British childhood and youth, and to set the innocent captives free.

“There stood his friend and supporter with heart and purse, John Wood, of Bradford, than whom no one did more for this cause; and he did more, perhaps, by his frequent public declarations of his own past *error* as a supporter of the white slavery system in factories, than by the thousands of pounds which he freely disbursed in promoting this cause.”

The proceedings of this county meeting lasted five hours: there stood (after their exhausting march) that dense mass of human beings, as if rooted to the earth. The meeting was addressed by clergymen, physicians, and influential county gentlemen. Mr Smith, of Leeds, made a clear and simple statement of the evils of the factory system, which admitted of no contradiction; Michael Thomas Sadler, Esq., M.P., renewed his pledges to mercy against Mammon; George Strickland, Esq., M.P., (now Sir George), assured his constituents, and others, of his determination to be faithful to the cause of the factory children. A Yorkshire nobleman, the Honourable William Duncombe, now Lord Feversham, cheered the hearts of all by assuring his hearers that he considered the factory question as of the highest importance, and judiciously observed:—“After all, highly important, and deeply interesting as this question is, I consider it but a branch of a question, which will ere long force itself upon the attention of parliament and the executive government—I mean the whole condition and circumstances of the industrious and labouring classes. Not that I contemplate the possibility of being enabled, by any human law or enactment,

to secure to all the various classes and interests of this empire an uninterrupted quantum of happiness; I believe it has been decreed otherwise; that as it has been ordained by the Almighty Creator of the Universe, that the rays of the sun shall not always shine upon us, but that night shall follow day, and winter succeed the summer, so has it been decreed in His inscrutable wisdom that we should experience a season of adversity as well as prosperity, that we may learn how to enjoy the one, and learn, also, how to appreciate the other. But I nevertheless hold it to be the bounden and indispensable duty of every man who has the safety, honour, and welfare of the country at heart, to direct his most anxious attention to the state and circumstances of the industrious and working classes, with the view, and in the hope of being enabled to ameliorate their condition, to alleviate their burthens, and to mitigate their distress. This is no new doctrine of mine; this is no opinion taken up yesterday, or to-day, for the purpose of obtaining any momentary applause, or any ephemeral popularity—it is one which I have long entertained, and which, when the opportunity presented itself, I have endeavoured to enforce. But not to trespass farther upon your indulgence on the present occasion, I will only repeat my most cordial assent and unequivocal approbation of the object for which you are assembled here to-day, and should there be any individuals who are still doubting, and wavering in doubt as to the course they should pursue, or who are determined, if they interfere at all, to oppose the bill, from anything like party feeling and political bias, I would entreat them to dismiss all such considerations from their minds; I would implore them to weigh the matter with that impartiality and that earnestness which its importance demands; I would ask them to recollect that this is not the cause of party, that it is the cause of justice—that it is the cause of real humanity, of Christian benevolence—that it is the cause of those who, from their earliest youth and their tenderest years, contribute by their

labour and their industry to form the source of our country's wealth and our country's greatness, the remedy for whose grievances is not in their own hands—that it is the cause of the oppressed and the industrious poor:—

‘ Let not ambition mock their useful toil,
Their homely joys, and destiny obscure ;
Nor grandeur hear, with a disdainful smile,
The short and simple annals of the poor.’ ”

These generous and manly words, from the lips of the heir of a noble house, and the representative of the county of York, had great weight with all classes, they strengthened in the breasts of the operatives their cherished hopes of final release, they felt in their oppression that their woes had reached the ears of some among the great and honoured of the land, that the wrongs of the cottage had been met by sympathy in the mansion.

Joseph Yorke, Esq., the High Sheriff, when he closed the business of the meeting, said :—“ Gentlemen, I cannot let this opportunity pass without remarking upon the good conduct you have observed during the course of this day ; a conduct which reflects credit upon yourselves, which should be held up as an example for the imitation of others, and which is worthy of the great county to which you belong. The business of the day is concluded.”

The friend whose communication we have already quoted continues his graphic description of what he and others saw, as follows :

“ ‘ Three cheers for the High Sheriff ’ made the welkin ring ; and a clergyman on the platform, whose heart was in the right place, demanded one cheer more ‘ for the Factory Children and their Mothers,’ and this was louder still—this struck another chord in the brave hearts of the now receding multitude, who thought next of ‘ home,’ and, though dreary, yet dear. With the ‘ King ’ at their head they quietly and orderly departed, and ‘ To Tadcaster,’ was the cry in that heart-moving host.

“Such a one never visited York before—no such purpose had ever brought so many thousands of poor men to that city, at their own charge, unpaid and poorly provided for—not to shout for blue, yellow, or pink ; not to cram public houses, and fill the streets with victims of inebriety ; but a host upon whose faces were imprinted the deep lines of care, and yet the sure marks of tender affection for their hapless babes, their heart-sick wives, their degraded sisters and relations, on whose behalf they had come ; and having recorded their protest against the tyranny that crushed and cankered all the ‘sweets’ of ‘home,’ and demanded in firm but respectful terms the justice of their country, they now peacefully retired, foot-sore and weary, and many of them very hungry, yet they shouted, ‘Oastler and our Children,’ and set their faces homeward once more.

“‘Do you think,’ said a Dignitary on that day, to a country clergyman from the west, whom he met at the Castle Yard gates, ‘Do you think that these men are to be trusted—would it be well to have the military ready?’ ‘What makes you fear?’ said the other. ‘Why, really, they look a stern, determined set of men—there is something very alarming in their appearance. Do you suppose they will stop in York to-night?’ ‘Not a dozen of them,’ was the reply. ‘And as to your fears, give them to the winds : these are not the men to sack York or do mischief. They have come at the bidding of their wives and children to ask for justice, not mercy.’ The West Riding clergyman proceeded to explain to the Prebendary the state of the case, and he declared that the visit and the visitors were both unparalleled in the annals, not of York only, but of the civilised world ; and parted, much affected with the subject.

“The weather continued boisterous and wet—torrents poured down—bread was scarce—and where to rest that night many knew not. Stables, barns, school rooms, and out-houses had been engaged at Tadcaster, and well strewn with ‘long

feathers ;' but there were many who could not reach so far—it was nine long miles, and their feet were bare—blistered—bleeding, some profusely, and far short of Tadcaster, some hundreds implored a resting-place at inns of various grades, or wherever they could get a roof to cover them. The inhabitants were truly kind, and the poor befriended the poor.

“The principal leaders of this affecting group had occasion, for the sake of business as well as refreshment, to wait a few hours at York. Sadler was nearly exhausted. His friend John Wood, with his accustomed benignity, provided at his hotel every refreshment, restorative, and comfort, that York afforded, for the benevolent Parliamentary Champion and his attendant friends ; but the comforts of a fireside and ‘good beds’ at York were no entertainment to those who had followed in spirit, and some in person, on their weary way, the Pilgrims who were pacing the road homewards amid storms of rain.

“The thought that some might perish from destitution or exhaustion, was no sooner suggested by the Rev. G. S. Bull to the party at the George, in Coney street, than the cry went round, ‘What can be done ?’ Mr Bull then proposed that the most ample covered waggons that York could afford, with a store of bread and restoratives, should at once start and bring up the rear ; he offered to take the command of the hospital train ; but he was not allowed to perform this work of mercy alone. Messrs Robert Hall and William Osborn, jun., (to whose able and indefatigable, and peculiarly disinterested labours, the Factory workers owed then, and must continue to owe, a lasting and yet unpaid debt of gratitude), at a moment’s notice of the plan proposed, insisted upon being upon the staff, alleging that they had been comfortably bedded the night before, while their reverend coadjutor had been all the rainy night previous with the Pilgrims upon the road.

“The waggons were procured, ample means for defraying the expenses were instantly afforded by Mr Wood, and after a search in the streets of York for stragglers, which brought only three persons to the waggons, the party started, provided with lanterns to inspect the roadside, or the ditches if requisite. At the first public house that came in view after leaving the city, search was made for the disabled. The landlord was sitting up at his fire—the kitchen floor was strewn with those who were ‘fair *done*,’ (to use their own term)—the outbuildings and stables were equally well furnished, and presented a singular spectacle. The reverend ‘King of the Cripples,’ as the chief of this staff humorously designated himself, went into these places to ask for bad cases, of lame Pilgrims who would not be able to proceed, and some bad ones soon presented themselves.

“The first that was awakened from his sound sleep, and lifted his head from a blanket of straw, was an old Waterloo veteran, whose medal gave him at once a noble distinction. ‘What’s your errand,’ said he, ‘is there ought amiss?’ ‘Nothing, my lads, except, as I suspect, with your heels. Have you any cripples here? for I am come, by order of the Committee, to seek them up, and have a comfortable covered waggon to take them on in.’ The soldier rubbed his eyes, to take a full view of his unexpected visitor, and then shedding some honest tears, he said, ‘God bless you, friend—you are a Christian! And now,’ says he, ‘where’s that lad that I dragged in?’ and he groped for him among the straw, and soon produced a poor Factory Poy, long a victim of the system—lean, withered, and wan—whose feet were literally raw; he had wrapped them in part of what had been a shirt, and seemed unwilling to move, overpowered as he was with fatigue. His comrades and townsmen, of whom two or three were in company, designated him by the curious and abbreviated name of ‘Pick Butt.’

“Several more, with their feet bleeding profusely, and in

wretched plight, were also found, and removed to the hospital waggons, where they were warmly covered and well disposed of. The Waterloo veteran, though nearly as bad as the rest, with the true magnanimity of his 'order,' refused to go, and gave place in favour of those who should yet be found on the road, as he said, 'quite mashed up.' The joy and gratitude of many of these disabled Pilgrims—several of them twenty, and some forty miles from home, when thus overtaken and aided, was admirable and very gratifying.

“At Tadcaster, a very full load was completed, and, attended by their chaplain, the waggons went out of Tadcaster at an early hour, with 'King Richard' and his men, who had halted there for the night, and, after a very frugal breakfast, at martial summons, prepared to renew their journey. The care of the Committee in sending waggons for the disabled seemed to inspirit the whole company; and as a dense mass emerged from that peaceful town on the Leeds road, the company in the waggon unexpectedly struck up, as a morning song, the venerated doxology of 'Praise God, from whom all blessings flow;' the rear and van caught the strain, and a more solemn and affecting anthem never echoed on the blue vault of heaven; many a silent tear commended it to the Intercessor above. There were men on that road who had an interest in Heaven, though their lot on earth was poor indeed.

“The weather now cleared a little, the march was more cheerful, and home began to draw nearer. The district and the moor over which this multitude traversed, presented a singular, interesting, and animated appearance. Since the days of Julius Cæsar such a company had not traversed those hills. The receding and pursuing hosts in earlier days shouted for the battle as they caught sight of each other. Those fields and wilds had been dyed with the blood of feudal chieftains and their trains, and the hardy sons of 'the far North' had bled there, too; but now the earth was scalded

by the tears of British parents who were returning to comfortless homes. the scenes of wasting and excessive toil, in which, too often, *they* were to live, involuntarily idle, by the deathly labours of their hapless babes. Yes, they wept as they returned, and God has registered those tears. There was hope, indeed, but it was faint; and there was the sympathy that they had witnessed at York which abated the smart.

“ The last battalion had passed the Cross Roads, and about two miles from Leeds the ‘ King ’ called for a halt, till the rear should come up.

“ Oastler had headed his ‘ subjects ’ on foot through the entire journey. He was importuned to ride, but would not; he even refused the shelter of an umbrella, because others were destitute of that cover. He refused refreshment because there was too little for all. His hardy endurance of more than his full share of fatigue was the means of inspiring the vast mass, who sacrificed and endured so much on this occasion.

“ One incident will not be forgotten. There was a place on the road where a footpath, through the fields, shortened the distance. Oastler, with a few friends, took that path, upon which they had not proceeded far when a boy, of about ten years, was discovered lying in a furrow, in the last stage of exhaustion, benumbed with wet and cold, and literally perishing. The poor child was carried to the turnpike road, and there mounted on horseback, before a kind friend, who took the straggler on his lap. The boy was thus brought under the special conduct of ‘ his Majesty ’ to the hospital van, when every attention was promptly given to his case, and he soon revived. The hand of a kind Providence was thus manifested, and was acknowledged with thanksgiving. Not a life was lost!

“ The ‘ Crusaders ’ now poured into Leeds, and they were greeted by thousands. Here and there a diabolical spirit of disappointment was seen at the safe conclusion of this un-

paralleled enterprise, and some even ventured to exult over the sorry plight of that yet undaunted and cheerful body, who had endured so much with such exemplary fortitude from the adverse elements. Many had yet twenty or nearly thirty miles to go, and after a short halt and refreshment, and a visit in the White Cloth Hall Yard from Sadler, who came to cheer and to be cheered, 'the King's own,' the Huddersfield division started again, and arrived at home, amid the greetings, cheers, and tears, of wives and children, who came out to welcome them *to the best they had left*.

"It will seem incredible that, after all this fatigue, the Huddersfield men that same evening held a public meeting, and kept up their recital of the Pilgrimage to a vast auditory until a late hour: finishing that day's work by a dance in the market place! That night, when Oastler undressed, the skin of the soles of his feet peeled off with his stockings. The remoter effects of this mighty effort are still in operation. The journey, its objects, its circumstances, will never be forgotten; and generations yet unborn will learn with wonder, that, in a professedly Christian land, such a cause should exist for such a demonstration of patriotic sympathy and parental affection.

"The happier firesides, it may be hoped, of our distant successors on the theatre of life, will be entertained with the legend of 'The Pilgrimage of Mercy,' and England's hearths and Altars shall yet, we hope, record the downfall of infant slavery in every part of our island, and the triumph of Christian love."

In the factory agitation science was brought out of her recesses, and exhibited to the popular gaze; the science of the physical organization of man and the science of life were made plain to the common understanding; drawings of factory operatives, whose limbs had been distorted and sources of life weakened by excessive labour, were unrolled and explained before aggregated masses, in public meetings. The effect was extraordinary. Men who had hitherto thought but little on

life, health, and disease, were astounded at what they beheld, and ashamed that they had allowed the oppression, the hideous results of which they for the first time contemplated. Mr Smith, Infirmary Surgeon, of Leeds, lecturing in the Castle Yard of York, on the beautiful arch of bone in the human foot, formed so as to sustain the whole weight of the human frame, uniting grace, strength, and elasticity, fitted for rest and motion; and showing his auditors how young children, who in factories were kept standing fourteen or sixteen hours of the day, had the arch of bone pressed down, the bones having fallen in, these children, so injured, being, in consequence, deformed for life, was a novelty in agitation, the necessity for which made good men blush. Such an exhibition of science, side by side with the injuries of the helpless, did much towards convincing the learned of the evils of the factory system. The simple-minded see, hear, and believe. The learned ask for analysis and proof,—they are “slow of heart to believe.” It was so of old, the unlettered fisherman heard and had faith; a vision from heaven was required to convince the learned tent-maker, but when convinced, who ever preached as did Paul? The journey of these drenched and weary travellers to York appealed to the hearts of all; each man, woman, and child, though silent, yet, in person, asked for pity and redress. The inspiring eloquence of Oastler, and the Christian tone of his supporters, filled the minds of their hearers with the noblest of sentiments, and a strong sense of duty, as standards by which they might judge their own actions and those of others. These things were necessary for acquiring the desired end; for opposition and interest were powerful; custom had enslaved the moral sentiments in many, and made others blind to their own guilt. Indolence, the shield of error, had to be shaken off, and conscience, the sentinel of truth, to be quickened into activity. A task, the end of which was noble, but the path to which was strewn with thistles and briers. Courage in a good cause is the right

arm of strength, and elevation of soul, the living principle of a nation's greatness. "Never," said Edmund Burke ; and none knew better than he—"Never," said the political philosopher, "was there a jar or discord between genuine sentiment and sound policy. Never, no, never did nature say one thing and wisdom say another. Nor are sentiments of elevation in themselves turgid and unnatural. Nature is never more truly herself than in her grandest forms." Few spectacles can, in moral grandeur, excel the noble determination of a numerous body of men, resolved that mercy shall temper a nation's rule, and Mammon be muzzled by law.

The parliamentary exertions of Mr Sadler on behalf of the industrious classes, and especially those engaged in factory labour, were acknowledged by the almost simultaneous greeting of tens of thousands of the working classes. In the autumn of 1832, when on a visit to his friend Mr Oastler at Fixby Hall, sixteen thousand persons, chiefly from Huddersfield and district, assembled in Fixby Park to do him honour, and thank him for his efforts on behalf of the oppressed. At Manchester, Mr Sadler and Mr Oastler were welcomed by a public procession and dinner. The reporter for the *Leeds Intelligencer* thus described the scene he witnessed: "Soon after five (in the afternoon of Saturday the 23rd of August, 1832) Mr Sadler and Mr Oastler left the Shakespeare, and entered an open carriage prepared for them by the Committee, amidst the most enthusiastic cheering; the bands saluting and the flags waving. They were accompanied by Mr John Wood of Bradford, the Rev. Mr Bull, and Mr Perring. Amidst this almost hurricane of applause the word was given to move forward for the place of meeting—Camp Field.

"The procession was headed by two men, bearing a flag with the representation of a deformed man, inscribed—'Am I not a man and a brother?' underneath, 'No White Slavery.' Then came a band of music; then the Committee and their friends; then a long line of Factory children bearing a great

variety of banners, decorated mops, brushes, and other utensils connected with their employment, hundreds of them singing, 'Sadler for ever, Oastler for ever; six in the morning, six in the evening.'

"One of the children carried a whip, and a strap made into thongs, with the inscription, 'Behold and weep.' Next to this immense multitude of 'little victims,' as they were aptly designated, came the carriage with the visitors. A countless number of men followed, five or six deep, all staunch friends of the Ten Hours' Bill, having at short intervals bands of music, banners, &c., with mottos expressive of some sentiment, opinion, or fact connected with the great cause. We cannot pretend to give a tithe of these inscriptions. We observed, 'Cursed are they that oppress the poor;' 'Let us unite and gain by strength our right;' 'Sadler and Oastler for ever;' 'Welcome to Sadler;' 'Oastler our Champion;' 'Sadler our advocate;' 'Let us unite in laying the axe to the root of infant slavery;' 'No White Slavery;' 'Death to infant oppression;' a figure of a deformed man exclaiming, 'Excessive toil is the burden of my soul.' One person carried a very neat model of a cotton-factory, inscribed, 'The infant's Bastile.' On other banners we remarked, 'Revere Oastler, the children's friend;' 'The Factory system is the bane of health, the source of ignorance and vice;' 'The enactment of a Ten Hours' Bill will be attended with beneficent results to both master and man.' Many of these flags and banners were of costly materials, and the devices skilfully executed; some of them were of more homely materials, but all were showy, and the effect to the eye cannot be conveyed in the most eloquent description. There were seventeen bands of music, and several hundred flags.

"In this order did the procession move through the principal streets of Manchester. The applause which greeted Mr Sadler and Mr Oastler was both enthusiastic and continuous. The men shouted; the women clapped their hands, or held up

their infant children, and screamed ‘ God bless Mr Sadler,’ ‘ God bless Mr Oastler;’ and thousands, we repeat, thousands, crowded round the carriage as it proceeded, and insisted upon shaking their benefactors by the hands, and all cried ‘ *Welcome to Manchester.*’ Nor were the greetings confined to the crowds in the streets. The windows were filled with spectators; even the house-tops in many instances were occupied. As to Mr Sadler, his name was in every mouth.

‘ He comes—Sinope’s streets are filled with such
 A glut of people, you would think some God
 Had conquered in their cause, and them thus ranked,
 That he might make his entrance on their heads.
 Mothers did rob the crying infants of the breast,
 Pointing Ziphares out to make them smile;
 And climbing boys stood on their fathers’ shoulders,
 Answering their shouting sires with tender cries,
 To make the concert up of general joy.’

“ This is poetry, but if applied to the scene in the streets of Manchester on Saturday evening, no fiction—it describes only that which really took place. It is to the honour of the females of the capital of Lancashire, that they seem most anxious to give their offspring the benefit of a more humane system, without reference to the question which avarice has raised in Yorkshire as a decoy—an asserted diminution of wages.”

Another witness thus expressed his opinion. “ The Manchester meeting has passed off in a most gratifying manner. It is acknowledged on all hands, that such an assembly, together, as to numbers, good feeling, and good order, never yet took place at Manchester. The procession was headed by thousands of poor factory children. It is calculated that at least one hundred thousand persons were present in the streets and Camp field. Mr Sadler and Mr Oastler were received with the greatest enthusiasm, and the vast multitude separated in the most perfect good order. Mr Sadler is on his way with

his true yoke-fellow, 'King Richard,' to Bradford, on Monday. This meeting will surely have due weight *in high places*. Will they say *now*, that the operatives do not care about the Ten Hours' Bill."

The Bradford procession and meeting were imposing and successful. It was apparent, beyond possible contradiction, that the factory operatives and their leaders were thoroughly in earnest, and that all efforts to neutralize their energy and resolution had proved fruitless.

Important services were rendered in 1832, by the publication of a small weekly periodical, *The British Labourer's Protector and Factory Child's Friend*. It was edited by the Rev. G. S. Bull, and Mr Charles Walker, of Bradford, Yorkshire. Its pages were devoted to an exposition of the evils of the unregulated factory system. Its circulation was very great, and the gratuitous services of the editors and their correspondents, for the labour was one of love, instructed the public mind to a very considerable extent.

Mr Oastler's exertions on behalf of the factory children brought down on his head much abuse and vituperation. In the manufacturing districts of the north, he is familiarly spoken of as "the King," a name given to him in contempt, but now considered a title of honour; how acquired, the following extract from *The Fleet Papers*, for January, 1841, will explain. In a letter addressed to Mr Thornhill, Mr Oastler wrote:—"Why, sir, you know what little school-boys do when the big ones have grieved them—they call names. It was just so with my rich and powerful enemies—nickname after nickname was given to me—and now I come to my title of 'King.' As these opprobrious terms were attached to my name by my antagonists, it was my habit to adopt them, and thus deprive them of their sting. So, whatever epithet they added to 'Oastler,' I claimed it as my own. If they said 'fool,' I rejoined 'so be it, but your tyranny shall cease.' When they denounced me as 'a madman,' my answer was

‘be it so; but the monster shall fall.’ Thus they attacked, and thus I repelled their intended insults, through a long list of terms of contempt and derision, which to recount would only weary you. At length I was tired of change, when, in an unlucky moment for themselves, in burlesque, they called me ‘King.’ For why or for wherefore, is best known to them. I at once adopted the nickname of ‘King’ as I had done the others; but I added, I will change no more. There was an end of their insulting vocabulary—there was the beginning of my style and title of ‘King.’ My efforts in the factory question, as you know, obtained me some notoriety; and in proportion to the *hate* of the tyrants, was the *love* of the slaves. The people everywhere clung to the last nickname given to me by my foes; and when I appeared amongst them, I was greeted by no other name. The habit of calling me ‘King,’ in a while grieved none but those who gave me that title. I soon found that there was power even in the name of ‘King.’ On some occasions, when I have had to stem the angry torrent of revenge, the authority of that title has had its use. My opponents would gladly have recalled that nickname, but in a while they used it also, until the habit became universal, and is so now in Yorkshire and in Lancashire; when speaking to me, or speaking of me, both friends and foes say ‘King.’”

CHAPTER XI.

THE SOCIAL AND MORAL CONDITION OF MANCHESTER AND DISTRICT
IN 1831 AND 1832, AS DESCRIBED BY MR WILLIAM RATHBONE
GREG, OF BURY, LANCASHIRE, AND DR KAY (NOW SIR JAMES
KAY SHUTTLEWORTH).

NOT any subject of great public interest can fail in this country of being thoroughly discussed. Sooner or later writers having knowledge and superior talent will take sides, and thus an important public question will be sifted to the bottom; impartiality, indeed, is rarely to be expected, but from the force of controversy the principal facts will be cast on the surface. This is one of the advantages which flow from free speaking and free printing, the benefit of which it is the happiness of this country to enjoy. It was earnestly maintained by the free-trade school of political economists that Mr Sadler's bill did not strike at the root of any of the social evils operating on the working classes, that the true remedies were a repeal of the corn laws, an extended electoral suffrage, an increase of education, a thorough revision of the laws of trade, thereby enabling the British manufacturer successfully to conduct his business without the necessity of making demands on the labours of the working classes inconsistent with their permanent well-being. In the absence of these changes it was maintained that shortening the hours of factory labour would be a national calamity. Among the disciples of this school were two classes: the ultra free-traders affirmed that these changes

once accomplished, not any factory regulation would be required; others, more familiar with the state of the manufacturing districts, considered that those measures should be preliminary to factory legislation. To the last-named class belonged William Rathbone Greg, Esq., of Bury, Lancashire, and James Phillips Kay, Esq., M.D., two gentlemen whose pamphlets, the first published in 1831, the second in 1832, both devoted to a consideration of the physical and moral condition of those engaged in factory labour, conveyed to the reading public a more detailed, graphic, faithful, but deplorable account of the condition of the population of Manchester and district, than was elsewhere to be found. The publication of these pamphlets accelerated the growth of public opinion in favour of factory legislation; it was the custom of Mr Oastler and others to read extracts therefrom, corroborating the parliamentary evidence on the question, and either leaving out or replying to the educational and economical theories of the authors. This mode of reasoning had weight on public opinion; it proved the evils complained of to be real, and prepared the way for the proposed remedy. From these pamphlets we will select a few passages,—they will enable the reader to judge of the past and to compare it with the present of Manchester and neighbourhood.

Mr Greg, for confirmation of his “views on the *present* (1831) unwholesomeness of large manufactories,” appealed “to any one who has been long and intimately connected with the interior of these establishments; who has seen children enter them at ten or twelve years of age, with the beaming eye, and the rosy cheek, and the elastic step of youth; and who has seen them gradually lose the gaiety and light-heartedness of early existence, and the colour and complexion of health, and the vivacity of intellect, and the insensibility to care, which are the natural characteristics of that tender age, under the withering influence of laborious confinement, ill oxygenated air, and a meagre and unwhole-

some diet." Mr Greg had "witnessed all this repeatedly, and found it impossible to resist the obvious conclusion—a conclusion which cannot be gainsaid by any man of experience and observation."

Among the causes producing "this unhealthiness among the people employed in large manufactories, and the peculiar class of diseases which prevail among them, viz., general lassitude and debility, dyspepsia, and gastralgia," Mr Greg enumerated unwholesome and inadequate diet, "potatoes, butter, sometimes pastry, sometimes bread, often oateake, and *occasionally, though rarely*, a small sprinkling of bacon, or other meat, constitute their dinner six days out of the seven. For breakfast and supper they take sometimes fruit-pies, sometimes coffee (or what they call such), but far more generally tea, diluted till it is little else than warm water, and the materials of which never came from China, but are the production of one of those innumerable frauds which are practised upon those of the poor who are desirous to imitate the rich." "At first they make use of tea as a stimulant, to relieve the internal languor and depression which always accompanies an unhealthy and ill-regulated digestion; it affords a temporary relief at the expense of a subsequent reaction, which in its turn calls for another and stronger stimulus; and it is generally the case, that those among the work-people, who have been long habituated to the use of tea as a frequent meal, are at length reduced to mix a large proportion of spirits in every cup they take. This pernicious practice prevails to an inconceivable extent among our manufacturing population, at every age, and in both sexes.

"From the long hours of labour, and the warm and often close atmosphere in which they are confined, a very large proportion of our manufacturing labourers feel the necessity of some artificial stimulus; and we regret to say, that many of them, especially those which receive the highest

wages, are in the habit of spending a portion of their leisure, after working hours, more particularly on a Saturday evening, and during the Sunday, in besotting themselves with ale and beer; and, still oftener, with the more efficient stimulus of gin. It is customary for them in many of the towns to stop at the gin-shops, and take a dram as they go to their work in the morning, and another as they return at night; and where, as is frequently the case, the houses of the work-people lie in a cluster round the factory, it is not uncommon for a wholesale vendor of spirits to leave two gallons (the smallest quantity which can be sold without a licence) at one of the houses, which is distributed in small quantities to the others, and payment is made to the merchant through the original receiver. The quantity of gin drunk in this way is enormous; and it is painful to know, that children, and even girls, are initiated into this fatal practice at a very early age. . . . Ardent spirits are not the only stimulus which this class of people indulge in. Many of them take large quantities of opium in one form or another; sometimes in pills, sometimes as laudanum, sometimes in what they call an *anodyne* draft, which is a narcotic of the same kind. They find that this is a cheaper stimulus than gin, and many of them prefer it. It has been in vogue among them for many years when wages were low, and the use of it is now continued when there is no longer this excuse."

"The work of spinners and stretchers," Mr Greg considered to be "among the most laborious that exist, and is exceeded, perhaps, by that of mowing alone; and few mowers think of continuing their labour for twelve hours without intermission. Add to this that these men never rest for an instant during the hours of working, except while their *mules* are *doffing*, in which process they also assist; and it must be obvious to every one, that it is next to impossible for any human being, however hardy or robust,

to sustain this exertion, for any length of time, without permanently injuring his constitution.

“The air in almost all factories is more or less unwholesome. Many of the rooms are obliged to be kept at a certain temperature (say 65 degrees Fahrenheit) for the purpose of manufacture, and from the speed of the machinery, the general want of direct communication with the external atmosphere, and from artificial heat, they often exceed this temperature. This of itself is sufficient to enervate and destroy all energy of frame. . . . The hands employed in these large manufactories breathe foul air for twelve hours out of the twenty-four; and we know that few things have so specific and injurious an action on the digestive organs, as the inhalation of impure air.

“Women are often employed in factories some years after their marriage, and during their pregnancy, and up to the very period of their confinement; which, all who have attended to the physiology of this subject know, must send their offspring into the world with a debilitated and unhealthy frame, which the circumstances of their infancy are ill-calculated to renovate; and hence, when these children begin to work themselves, they are prepared at once to succumb to the evil influences by which they are surrounded.

“In consequence, also, of the mother's being employed from home, their children are entrusted, in a vast majority of cases, to the care of others, often of elderly females, who have no infant family of their own, having in their youth had their children nursed by others, have never formed those habits of attachment, and of assiduous attention to their offspring, which could alone afford a probability of a proper care of the children committed to their charge. These women often undertake the care of several infants at the same time; their habits are generally indolent and gossiping; the children are restless and irritable, from being deprived of a supply of their natural food; (as when the mothers suckle them, they can

only perform that duty in the intervals of labour; and the almost universal practice among them is to still the cries of the infant by administering opiates, which are sold for this purpose under several well-known forms. The quantity of opium which, from habit, some children become capable of taking, is almost incredible, and the effects are correspondingly destructive. Even when the infants have a healthy appearance at birth, they almost, uniformly, become, in a few months, puny and sickly in their aspect, and a very large proportion fall victims to bronchitis, hydrocephalus, and other diseases produced by want of care, and the pernicious habits detailed. Spirits, particularly gin, are frequently given when the infants appear to suffer from pain in the bowels, which, from injurious diet, is very common among them.

“The licentiousness which prevails among the dense population of manufacturing towns, is carried to a degree which it is appalling to contemplate, which baffles all statistical inquiries, and which can be learned only from the testimony of personal observers. And, in addition to overt acts of vice, there is a coarseness and grossness of feeling, and an habitual indecency of conversation, which we would fain hope and believe are not the prevailing characteristics of our country. The effect of this upon the mind of the young will readily be conceived; and is it likely that any instruction, or education, or Sunday schools, or sermons, can counteract the baleful influence, the insinuating virus, the putrefaction, the contagion of this moral depravity which reigns around them?

‘Nil dictu fœdum visuque hæc limina tangat,

Intra quæ puer est.’—*Juvenal*.

[Let nothing foul, either to the eye or the ear, be seen or heard within those doors which enclose a boy.]

“After all, what motive has either sex, in the class and situation to which we allude, for being virtuous and chaste? Where they are unshackled by religious principle, as is too generally the case, they have no delicate sentiments of morality

and taste to restrain them from gratifying every passion; they have few or no pleasures beyond those which arise from sensual indulgence, and they have no motive for refraining from this indulgence; it involves no loss of character, for their companions are as reckless as themselves; it brings no risk of losing their employment, for their employers know that it would be unsafe to inquire into those matters. It is often a cause of no pecuniary loss, for in many cases the poor laws provide against this; and, all these circumstances considered, the licentiousness of the manufacturing population is a source of bitter lamentation to us, but of no astonishment whatever."

This is indeed a dark picture—a state of existence more degraded it is impossible to conceive: the miserable condition of the operatives is hardly more to be lamented than the utter disregard of their employers, for the fulfilment of moral duties towards the employed. Such a state of society could not have existed, had the owners of factories, as a rule, not been dead to every interest but that of money-getting.

Dr Kay thus describes the condition of the operatives of Manchester (1832):—"Instructed in the fatal secret of subsisting on what is barely necessary to life, the labouring classes have ceased to entertain a laudable pride in furnishing their houses, and in multiplying the decent comforts which minister to happiness. . . . They are engaged in an employment which absorbs their attention, and unremittingly employs their physical energies. They are drudges who watch the movements and assist the operations of a mighty material force, which toils with an energy ever unconscious of fatigue. The persevering labour of the operative must rival the mathematical precision, the incessant motion, and the exhaustless power of the machine.

"Hence, besides the negative results, the total abstraction of every moral and intellectual stimulus; the absence of variety, banishment from the grateful air, and the cheering influences of light, the physical energies are exhausted by incessant toil and imperfect nutrition. Having been subjected

to the prolonged toil of an animal, his physical energy wasted—his mind in supine inaction—the artizan has neither moral dignity, nor intellectual nor organic strength to resist the seductions of appetite. His wife and children, too frequently subjected to the same process, are unable to cheer his remaining moments of leisure. Domestic economy is neglected, domestic comforts are unknown; a meal of the coarsest food is prepared with heedless haste, and devoured with equal precipitation. Home has no other relation to him than that of shelter—few pleasures are there—it chiefly presents to him a scene of physical exhaustion, from which he is glad to escape. Himself impotent of all the distinguishing aims of his species, he sinks into sensual sloth, or revels in more degrading licentiousness. His house is ill-furnished, uncleanly, often ill-ventilated, perhaps damp; his food, from want of forethought and domestic economy, is meagre and innutritious; he is debilitated and hypochondriacal, and falls the victim of dissipation.

“The average annual number of births (deduced from a comparison of the last four years), attended by the officers of the Lying-in Charity, is four thousand three hundred; and the number of births to the population may be assumed as one in twenty-eight inhabitants. This annual average of births, therefore, represents a population of 124,400, and assuming that of Manchester and environs to be 230,000, more than one-half of its inhabitants are therefore either so destitute or so degraded, as to require the assistance of public charity, in bringing their offspring into the world. Visiting Manchester, the metropolis of the commercial system, a stranger regards with wonder the ingenuity and comprehensive capacity, which, in the short space of half-a-century, have here established the staple manufacture of this kingdom. He beholds with astonishment the establishments of its merchants—monuments of fertile genius and successful design; the masses of capital which have been accumulated by those who crowd upon its mart, and the restless but sagacious spirit

which has made every part of the known world the scene of their enterprise. The sudden creation of the mighty system of commercial organization, which covers this country, and stretches its arms to the most distant seas, attests the power and the dignity of man. Commerce, it appears to such a spectator, here gathers in her storehouses the productions of every clime, that she may minister to the happiness of a favoured race.

“When he turns from the great capitalists, he contemplates the fearful strength only of that multitude of the labouring population, which lies like a slumbering giant at their feet. He has heard of the turbulent riots of the people—of machine-breaking—of the secret and sullen organization which has suddenly lit the torch of incendiarism, or well nigh uplifted the arm of rebellion in the land. He remembers that political desperadoes have ever loved to tempt the population to the hazards of the swindling game of revolution, and have scarcely failed. In the midst of so much opulence, however, he has disbelieved the cry of need.”

Dr Kay's acknowledgment of the deterioration in the domestic circumstances of the working classes of Manchester is striking and emphatic; they had so far sunk beneath their former state as to care little for the present and less for the future, to again quote the Doctor's compendious description of their moral and social state:—“The labouring classes had *ceased* to entertain a laudable pride in furnishing their houses, and in multiplying the decent comforts which minister to happiness.” These pitiable outcasts of modern civilization had fallen from comparative comfort into the lowest depths of helpless and hopeless recklessness and misery. Who could describe the suffering which must have been endured, as step by step this melancholy descent had taken place? The result was known, but the agony of human feeling which was suffered by tens of thousands of human beings in their downward course, and formed its prelude, was hidden. It may be

thought of, but cannot be named. A population who had *ceased* to desire improvement when left to themselves, when unaided and uninfluenced by external circumstances, had become an ulcer in the heart of the state, the poisonous humours of which, had they continued unchecked, would not have failed to have vitiated the whole vital system. Delay in such a case would have been madness, and that too of the most dangerous kind.

The statements of Dr Kay, like those of Mr Greg, were the results of close inquiry and minute investigation. The opposition of both to a reduction of the hours of labour unaccompanied by other measures was decided and persevering. "Those political speculators," said the Doctor, "who propose a serious reduction of the hours of labour, unpreceded by the relief of commercial burdens, and unaccompanied by the introduction of a *general system of education*, appear to us to be deluded by a theoretical chimera. The time thus bestowed would be wasted or misused—would be spent in sloth, in dissipation, or in listening with eager wonder to the declamatory dogmatism of political demagogues." These observations of Dr Kay are a striking illustration of what Bacon has happily called, "Idols of the tribe." Here is a man of a high order of intelligence wedded to certain general principles; he thinks it impossible that good can follow from the adoption of any other measures than those approved by him. Rest of body is the first requisite for one who is habitually overworked; no evil can flow from this requirement being reduced to practice, experience has proved that factory regulation has been beneficial in body, mind, and morals to those for whose good it was intended, its promoters have not been deluded theorists, they have been practical statesmen. It is deserving of attention that while Dr Kay maintained that long hours of labour were required to compensate the millowners for the payment of fiscal burden,

he was eloquent on the riches of the few and the misery of the many, thus proving that the industry of the many had aided in the production of wealth which the few enjoyed. So true it is that "the mind," as Bacon has observed, "is not like a plain mirror, which reflects the image of things exactly as they are; it is like a mirror of uneven surface, which combines its own figure with the figures of the objects it represents." Dr Kay conceived that each part of the system was, as it existed in 1832, "necessary to the preservation of the whole." In the absence of other changes he inferred that: "Whatever time was subtracted from the hours of labour must be accompanied with an equivalent deduction from its rewards." Mr Greg, who, as a cotton spinner, had practically observed the effects of long and short hours, was of a different opinion; he prognosticated that the reduction in the quantity produced in ten hours would not be equal to the reduction of from twelve to ten. Arithmetic was on the side of Dr Kay, but human nature, which cannot always be calculated by the rule of three, was on that of Mr Greg. Virtue and intelligence are, or ought to be, the great aims of civilised communities, these cannot be realised in the absence of conditions indispensable to health of body and mind. The evils and horrors of "the factory system" had grown up observed by few; when examined in all its hideousness it presented a picture which overwhelmed weak minds with sorrow and shame; men of cultivated understanding and resolute will were necessary for its amendment. Though Mr Greg and Dr Kay would probably have felt shocked at being associated with Mr Oastler and Mr Bull, yet the labours of the former contributed practically toward the same end as the latter—the physical, moral, and mental elevation of those employed in factory labour. A population so sunk in the slough of human, or rather inhuman, misery, could not be easily or rapidly improved: their industry had enriched a few millowners, but had lowered the standard of humanity.

What would have been the fate of these unfortunate factory operatives had the factory system never existed? They would have slumbered on in ignorance and comparative plenty, enjoying many natural comforts of which changed circumstances had deprived them; manufacture had indeed produced a change, it had lowered its victims beneath the level of brutes in their habits, and perverted the superior reason of living women and men from an appreciation of the homely virtues of domestic life to an admiration of that which was sensual and vicious. These things it had done, but it had failed to add one atom of moral good to society, or to have made even those who pocketed its money-gains wiser or happier.

Appropriately to Mr Greg's pamphlet, it is due to the author to say that subsequent experience caused, avowedly, a change in his opinions, the extent of which we cannot define. In a tract published by Mr Robert Hyde Greg (brother to Mr Wm. Rathbone Greg) on the factory question, an apology for the pamphlet quoted, is set forth, on the grounds of the author's youth and inexperience, and that he had "imprudently adopted as facts, the misrepresentations of a heated partisan of the Ten Hours' Bill." Mr Fletcher, the eminent surgeon of Bury, in Lancashire, is the individual referred to; he, in a letter published in the *London Times*, for June the 8th, 1837, animadverted on the apology of Mr R. H. Greg, and challenged him to refute any fact or argument in the obnoxious pamphlet, an important portion of the materials of which had been supplied by Mr Fletcher, and hitherto unacknowledged by Mr William Rathbone Greg. The challenge was not accepted. Not any man was better able to judge of the condition of the working classes of Lancashire than was Mr Fletcher; we willingly give our testimony to his virtues and services.

He was among the earliest supporters of a Ten Hours'

Bill; he has from the first been an able and persevering advocate of the claims of factory children to the protection of the law; his experience of the effects of factory labour on health and morals was, because of his extensive professional practice as surgeon in a factory district, of necessity, great; his talent and moral courage marked him out as an able auxiliary of any cause he might espouse. It was Mr Fletcher's habit for years to lecture in the towns and villages of his own neighbourhood on the factory system, and its injurious effects on health. His benevolence won for him the respect of the poor; his high professional knowledge, while it failed to disarm the prejudice of opponents, forced even from them an acknowledgment of his talent and sincerity. Mr Fletcher has been throughout life an observer of facts; the fruits of his experience have been freely communicated to others, who, in and out of parliament, have turned those to good account, so far as Mr Fletcher's desires and the interests of the factory operatives were concerned. Mr Fletcher has been at all times an arduous, if not always a conspicuous worker, for the elevation of the working classes; so long as probity, superior talent, and energy shall command respect, he will not fail to enjoy the good opinion of his fellow-citizens; when the solid and superficial have been separated, and each has received his due, the name of Mr Fletcher will stand high among the moral and social reformers of his generation.

CHAPTER XII.

EVIDENCE BEFORE THE SADLER COMMITTEE.—MR SADLER'S EXTRA-ORDINARY EXERTIONS.—PRECARIOUS STATE OF HIS HEALTH.—GROWTH OF PUBLIC OPINION.—PRESENTATION OF THE GREAT YORKSHIRE PETITION.—“THE DUKE OF SUSSEX AND THE FACTORY BILL.”—PERSECUTION OF WORKING-MEN WITNESSES BY THEIR EMPLOYERS.

It is difficult to form just conceptions of the force of habit; fully to apprehend its influence on the actions of men is perhaps beyond the range of the human intellect. A comparison between the duties and acts of men, as these are understood in an avowedly Christian community, will assist in the estimating of the direct result flowing from the daily practices of life. “The law,” says Dr Brown, “on which right and wrong depend, did not begin to be law when it was written; it is older than the ages of nations and cities, and contemporary with the very eternity of God. There is indeed, to borrow Cicero’s noble description, one true and original law, conformable to reason and to nature; diffused over all, invariable, eternal; which calls to the fulfilment of duty and to abstinence from injustice, and, which calls with irresistible voice, which is felt in all its authority, wherever it is heard. This law cannot be abolished or controlled, nor affected in its sanctions by any law of man. A whole senate, a whole people cannot dispense from its paramount obligation. It requires no

commentator to render it distinctly intelligible ; nor is it different at Rome, at Athens now, and in the ages before and after ; but in all ages, and in all nations, it is, and has been, and will be, one and everlasting ; one, as that God, its great author and promulgator, who is the common Sovereign of all mankind, is himself one. Man is truly man as he yields to this divine influence. He cannot resist it, but by flying, as it were, from his own bosom, and laying aside the feelings of humanity, by which very act he must already have inflicted on himself the severest of punishments, even though he were to avoid what is usually accounted punishment. We feel that the laws of nature are laws which no lapse of ages can render obsolete, because they are every moment operating on every heart, and which, for the same reason, never can be repealed till man shall have ceased to be man." This law, inherent in the heart of man, pregnant with the feelings of humanity, sanctioned by the command—"Do unto others as you would they should do unto you," is constantly violated. The world is saturated with crimes, because of the violation of the laws of nature and the dictates of conscience. We are unable to account for the systematic violation of known and acknowledged duties, but by the consciousness of natural depravity and a reference to the force of habit. The majority of the millowners and their servants were professing Christians, members of some one or other of the various religious denominations, agreeing in common on the fulfilment of the duties of life, thus adding the obligation of revealed to natural law, and being, therefore, bound in reverence and duty to do justly and love mercy. Yet many of these millowners, and their principal servants, violated almost unceasingly the promptings of humanity and the revealed Law of God, as avowed by their own professions. Strange, and, at first sight, apparently unaccountable inconsistency. How to be accounted for, otherwise than by an acknowledged

ment of natural depravity, and a consideration of the power of habit over the deeds of men, we know not. These violators of natural and revealed laws had allowed their minds to become impressed with the desirableness of one object, all others were lost in its contemplation—that object was the manufacture and sale of a commodity at such prices as to the manufacturers should be profitable. The sufferings endured by those engaged in the process of manufacture, either escaped observation, or were allowed, as necessary for the realization of the desired end. The effects of habit were not less strikingly illustrated, in the case of some statesmen. If the actual suffering of those engaged in the working departments of cotton-mills, had been placed side by side with the actual profits, and the only alternative have been the total acceptance or rejection of both, few members of the legislature would have hesitated. To reject both would have been the rule, but legislators had, in their own minds, been accustomed to associate factories with national wealth; national wealth, they maintained, was a necessity, and they failed in most instances to bestow more than a passing thought on the national evils paid as the purchase-money of the wealth they admired. They everywhere beheld the physical results of mechanical and concentrated power applied to manufacture, but seldom cast even a passing glance on the sources of widely-spread wealth, dried up in consequence. Dazzled by the prospect of present gain, they failed to have regard to the inevitable penalty which nature invariably levies upon all who fail to respect her laws. They imagined that the sufferings to which we have alluded were themselves alone to be weighed in the balance against the profits of the system; nature, however, cannot thus be defrauded; her laws are inexorable, and the price which she demands for the infringement thereof, she has the power to enforce. In the train of those sufferings followed the

sustenance of that poverty, the punishment of those crimes, which the factory system generated—the price in money of that penalty in itself being incalculable.

It was reserved for the committee, presided over by Mr Sadler, fully to establish the *data* from which the evils of the factory system could be more completely than hitherto estimated. It would be impossible to over-rate the practical utility of the evidence given before Mr Sadler's committee. Eighty-nine witnesses were examined, there were asked eleven thousand, six hundred, and eighteen questions; not one of these questions, or answers thereto, could be justly considered irrelevant, all bore directly on the main subject of the enquiry, and opened out a more complete picture of the social condition of those employed in the principal branches of manufacture, than any other on record. We select from this body of evidence, the principal facts elicited during the examination of factory operatives; the evidence of these witnesses, in all its main points, was corroborated by many others, and it may be accepted as a fair specimen of the kind of evidence given by that class of witnesses.

We, for brevity's sake, have condensed the facts stated before the Sadler committee, by several important witnesses, into narrative form, but have preserved, as far as convenient, the words in the questions asked, and the answers given.

Abraham Whitehead :—

“I am a clothier, and reside at Scholes, near Holmfirth, which is the centre of very considerable woollen mills for three or four miles; I live near the centre of thirty or forty of them, and have had constant opportunity of observing the manner in which these mills are regulated and conducted, and I have observed them for at least the last twenty years. The youngest age at which children are employed is never under five, some are employed between five and six as pieceners. In the summer time I have frequently seen these children going to their work as early as five or six in the morning, and I

know the general practice is for them to go as early to all the mills, with one or two exceptions ; I have seen them at work in the summer season between nine and ten in the evening ; they continue to work as long as they can see, and they can see to work as long in these mills as you could see to read. In winter there is a variation ; some of the mills begin to work at six o'clock, and some only begin so soon as they can see to work in the morning, but many of them begin by six, or between five and six in winter time. I live near to parents who have been sending their children to mills for a great number of years, and I know positively that these children are every morning in the winter season called out of bed between five and six, and in some instances between four and five. My business as a clothier has frequently led me into these mills, to carry work to or from them. I have for the last twenty years constantly made observations on these mills, having seldom missed a week going to some of them, and sometimes two or three times a day. I cannot say that I ever saw these mills actually at work later than ten ; I do not say they have not been at work later ; I have seen them as late as ten in the winter season—children of tender years were employed. I have been in mills at all hours, and I never in my life saw the machinery stopped at breakfast time at any of the mills. The children get their breakfast as they can ; they eat and work ; there is generally a pot of water-porridge, with a little treacle in it, placed at the end of the machine, and when they have exerted themselves to get a little forward with their work, they take a few spoonfuls for a minute or two, and then to work again, and continue to do so until they have finished their breakfast. This is the general practice not only of the children, but of the men, in the woollen mills in the district. There is not any allowance for the afternoon refreshment, called 'drinking,' more than for breakfast. In summer, some of the mills allow an hour

for dinner, and others, forty minutes. There is no time allowed in winter, only just sufficient to eat their dinner; perhaps ten minutes or a quarter of an hour; and in some cases, they manage the same at noon as they do at breakfast and drinking. The children are employed as pieccners; they, when at work, are always on their feet—they cannot sit and piece. The only interval the children have for rest, is the very short time allowed for dinner, except it may sometimes happen that they may be out of what we call ‘jummed wool,’ and then the children have a short opportunity to rest themselves, and even then they are frequently employed in cleaning the cording machine.

“I have seen children during the last winter (1832) coming from work on cold dark nights between ten and eleven o’clock, although trade has been so bad with some of the mills that they have had nothing to do; others have been working seventeen or seventeen and a-half hours per day. This requires that the children should be awakened very early in the morning. I can tell you what a neighbour told me six weeks ago—she is the wife of Jonas Barrowcliffe, near Scholes; her child works at a mill nearly two miles from home, and I have seen that child coming from its work this winter between ten and eleven in the evening; and the mother told me, that one morning this winter, the child had been up by two o’clock in the morning, when it had only arrived from work at eleven; it then had to go nearly two miles to the mill, where it had to stay at the door till the overlooker came to open it. This family had no clock; and the mother believed, from what she afterwards learnt from the neighbours, that it was only two o’clock when the child was called up and went to work; but this has only generally happened when it has been moonlight, thinking the morning was approaching. It is the general practice in the neighbourhood—and any fact that I state

here can be borne out by particular evidence that, if required, I can point out.

“The children are generally cruelly treated; so cruelly treated, that they dare not hardly for their lives be too late at their work in a morning. When I have been at the mills in the winter season, when the children are at work in the evening, the very first thing they inquire is, ‘what o’clock is it?’ if I should answer ‘seven,’ they say, ‘Only seven? it is a great while to ten, but we must not give up to ten o’clock or past!’ They look so anxious to know what o’clock it is, that I am convinced the children are fatigued, and think even at seven that they have worked too long. My heart has been ready to bleed for them when I have seen them so fatigued, for they appear in such a state of apathy and insensibility, as really not to know whether they are doing their work or not: they usually throw a bunch of ten or twelve cordings across the hand, and take one off at a time; but I have seen the bunch entirely finished, and they have attempted to take off another when they have not had a cording at all; they have been so fatigued as not to know whether they were at work or not. The errors which they make when thus fatigued are, that instead of placing the cordings in this way [*describing it*], they are apt to place them obliquely, and that causes a flying, which makes bad yarn; and when the billy-spinner sees that, he takes his strap or the billy-roller, and says, ‘D——n thee, close it—little devil, close it,’ and he smites the child with the strap or the billy-roller. It is a very difficult thing to go into a mill in the latter part of the day, particularly in winter, and not to hear some of the children crying for being beaten for this very fault. How they are beaten depends upon the humanity of the hubber or billy-spinner; some have been beaten so violently that they have lost their lives in consequence;

and even a young woman had the end of a billy-roller jammed through her cheek. The billy-roller is a heavy rod of from two to three yards long, and of two inches in diameter, and with an iron pivot at each end; it runs on the tops of the cordings over the feeding cloth. I have seen the billy-spinner take the billy-roller and rap children on the head, making their heads crack, so that you might have heard the blow at the distance of from six to eight yards, in spite of the din and rolling of the machinery; many have been knocked down by the instrument. I knew a boy very well, of the name of Senior, with whom I went to school; he was struck with a billy-roller on the elbow, it occasioned a swelling, he was not able to work more than three or four weeks after the blow, and he died in consequence. There was a woman in Holmfirth who was beaten very much with a billy-roller. This which is produced (*showing one*) is not the largest size, there are some a foot longer than that; it is the most common instrument with which these poor little pieceners are beaten—more commonly than with either a stick or a strap. It is detached from the machinery in the following manner:—Supposing this to be the billy-frame (*describing it*), at each end there is a socket open, the cording runs underneath here, just in this way, and when the billy-spinner is angry, and sees the little piecener has done wrong, he takes off this and says ‘D——n thee, close it.’ I have seen them frequently struck with the billy-roller; I never saw one so struck as to occasion its death, but I once saw a piecener struck on the face by a billy-spinner with his hand, until its nose bled very much; and when I said ‘Oh, dear, I would not suffer a child of mine to be treated thus,’ the man has said, ‘How the devil do you know but what he deserved it.’

“With regard to the morals of the children who work in mills, we cannot expect that they can be so strict as

children who are generally under the care of their parents. I have seen a little boy, only this winter, who works at a mill, and who lives within two hundred or three hundred yards of my door ; he is not six years old, and I have seen him, when he had a few coppers in his pocket, go to a beer shop, call for a glass of ale, and drink as boldly as any full-grown man, cursing and swearing, and saying he should be a man as soon as some of them. I do not know that there are many such boys, but the expressions of children in mills very much accord. You cannot go into a mill where even the most wealthy master clothier is called Sir or Master ; they call them all ‘ Old Tom,’ or ‘ Young Tom,’ &c. They call their employers so.

“ There is not any possibility of children employed in this way obtaining any instruction from day-schools ; but since this factory bill was agitated, when I have been at mills, the children have gathered round me for a minute or two as I passed along, and have said, ‘ When shall we have to work ten hours a day ? Will you get the Ten Hours’ Bill ? We shall have a rare time then ; surely somebody will set up a neet (night) school ; I will learn to write, that I will.’ The opinion of the inhabitants of my neighbourhood is, that if a Ten Hours’ Bill be passed, it will be the greatest advantage that they could possibly enjoy. They are of opinion that the more hours they work, the less they receive for it. They say that the markets are overstocked by overworking, and the men are overworked. When a master gets an order for a certain quantity of goods, he sets all his men to work night and day until it is completed. It is the general opinion that if a stop is not put to this excessive and increasing labour, there will never be an end to the reduction of wages ; but whether the wages will be reduced or not, they are convinced it will be a benefit ; and they are anxious that the bill should be passed into a law. I live six or seven miles from Huddersfield—there

is a mill at Smithy Place, three miles and a-half from Huddersfield; and that mill worked so long about two years ago, that a boy at that mill actually hanged himself, because he said he would sooner do it than work so many hours a day as he had done. I had a brother-in-law working at the mill at the time, and sufficient evidence can be produced before this Committee, to prove that the boy destroyed himself rather than be so overworked. From what I have observed, I do not believe that so beneficial an alteration in the hours of labour as would follow the enactment of the Ten Hours' Bill, could be brought about except by a legislative enactment; for the parents who send their children to the mills are generally those who could not provide for them by any other means, and they have no alternative but to send them. But the masters as well as the men generally in the neighbourhood of Holmfirth, are disgusted with the overworking of children, and they say that it ought to be remedied. But it cannot be remedied unless every one is compelled to do as others do. We understand by the Ten Hours' Bill, a bill that will not allow children of a certain age to be actively employed more than ten hours per day, which will be twelve, leaving two hours for rest and refreshment. I have never seen the harsh treatment I have described, exercised upon persons of fifteen or sixteen years of age; persons of these ages are generally employed in some other business than piecening. It appears to me that parliamentary interference is necessary to protect the parents as well as the children. The children have excited commiseration by being overworked. It is also injurious to the parents, because the masters or millowners who have no conscience or feeling, do not care what length of time they run their mills. When one takes the lead, another must follow, and then all continue to work long hours: although the first might feel some advantage, yet when all come to that point, the advantage is lost, and

they must strain another point or there is no advantage in it; by doing so, they lower the wages more and more—and the more they work, the less wages are obtained. If protection were afforded by law to children up to the age of fifteen, those above that age would then suffer; and why should they continue to work seventeen or eighteen hours per day? It seems to me that youths ought to have some opportunity of learning to read and write, and other domestic duties. For instance, when females who were brought up in mills get married, they know not how to conduct a family, how to purchase household things, or how to manage their children; it is even a proverb in the neighbourhood of Holmfirth, that the man who would have a good wife must take care not to marry ‘a factory doll,’ as she will not know how to manage a family. I think all ought to be protected by law until they be twenty-one years of age I know, from my own knowledge, that children of the age of from six to twelve have really been working from sixteen and seventeen hours per day—I know it by seeing them going to their work and coming from their work, the same children.”

James Paterson:—

“I reside at Dundee, am twenty-eight years of age, and by business a mill-overseer. I have been acquainted with the mill system in Dundee and neighbourhood for a long time. At ten years of age I entered a mill; it was Mr Proctor’s, of Glamis. I worked in the carding-room, which was very dusty. There were fourteen hours’ actual work, and fifteen hours a-day confinement, including meals. I suffered from shortness and stoppage at the breast, and was forced to leave in consequence. I was nearly three years at Mr Proctor’s. Other children were similarly affected; I had a brother who was at that work too, and he was compelled to leave for bad health, and was laid up and died of consumption. The

doctor said it was occasioned by being confined at that work. My brother died at eighteen years of age ; he had originally a good constitution.

* * * * *

“I worked at Mr Braid’s mill, of Duntruin ; there we worked as long as we could see in summer time, and I could not say at what hour it was we stopped. There was nobody but the master, and the master’s son, had a watch, and we did not know the time. The operatives were not permitted to have a watch. There was one man that had a watch, I believe it was a friend who gave it him ; it was taken from him and given into the master’s custody, because he had told the men the time of the day. There was no clock at that mill. There were a great many children in proportion to the number of adults, most of them were orphans. There was a part of them that came from Edinburgh, and a part of them from Perth. There were some of the orphan children from Edinburgh who had been in the mill, I believe, from four to five years. The children were incapable of performing their day’s labour well towards the termination of the day ; their fate was to be awoke by being beaten, and to be kept awake by the same method. They were under that mode of treatment, kept on the premises by being locked up, while at work ; they were guarded up to their bothies to take their meals, they were locked up in the bothies at night, and the master took the key away with him to his own bedroom ; they were guarded to their work, and they were guarded back again, and they were guarded while they were taking their meat, and then they were locked up for rest. The windows of the bothies where they slept had all iron stanchions on the outside, so that they could not escape. They were not allowed to go to a place of worship on the Sunday ; they were guarded on the premises by the master or his son. There were twenty-five or twenty-six of us together. There was one bothy for the boys, but that did

not hold them all, and there were some of them put into the other bothy along with the girls. The ages of the boys that were put into the girls' bothy might be, I should suppose, from ten to fourteen, the ages of the girls, perhaps, from twelve to eighteen.

“The children and young persons were sometimes successful in their attempts to escape from labour and confinement. I have gone after them on horseback and brought them back myself. Those brought back were taken into the mill, and got a severe beating with a strap; sometimes the master kicked them on the floor, and struck them with both his hands and his feet. Those who had made engagements for any length of time, when they ran away, the master, if he could not find them before they got home to their relations, if they had any, he sent after them and put them in gaol. I knew a woman put in gaol, and brought back after a twelvemonth, and worked for her meat; and she had to pay the expenses that were incurred. There were some engaged for two years, and some as far on as three years, and some of those girls sent from Edinburgh, I heard them say, were engaged for five years. That girl that was sent to prison worked two years for nothing, to indemnify her master for the loss of her time while she was in the course of punishment, but there was a sister who came to work nine months or so to help her to perform the two years.

“When the hands worked those long hours, the master came himself and roused them in the morning, and those that would not rise, I have seen him take a pail of water and throw it upon them, to make them rise. One of the means taken to secure those children and young persons from running away was that their clothes, if they had any not in use, were kept locked up, so that if they ran away they could only run away with what was on their backs. Those children were at times beaten very violently.”

Joseph Habergam:—

“I reside at North gate, Huddersfield, in Yorkshire—I was seventeen years of age on the 21st of April. I have been without a father six years on the 8th of August—my mother survives. I was seven years of age when I began to work at George Addison’s, Bradley Mill, near Huddersfield; the employment was worsted spinning; the hours of labour at that mill were from five in the morning till eight at night, with an interval for rest and refreshment of thirty minutes, at noon; there was no time for rest or refreshment in the afternoon; we had to eat our meals as we could, standing or otherwise. I had fourteen-and-a-half hours’ actual labour when seven years of age, the wages I then received was two shillings and sixpence per week. I attended to what are called the throstle machines; this I did for two years and a half, and then I went to the steam looms for half-a-year. In that mill there were about fifty children, of about the same age that I was. These children were often sick and poorly; there were always, perhaps, half-a-dozen regularly that were ill because of excessive labour. The work was not very hard, but having to work so very many hours made it worse; it was rather hard of itself, but it would have been better if we had not had so long to stand. We began to grow drowsy and sleepy about three o’clock, and grew worse and worse, and it came to be very bad towards six or seven, I had still to labour on. There were three overlookers; there was a head overlooker, and then there was one man kept to grease the machines, and then there was one kept on purpose to strap. Strapping was the means by which the children were kept at work. It was the main business of one of the overlookers to strap the children up to this excessive labour,—the same as strapping an old restiff horse, that has fallen down and will not get up. This was the practice day by day. The overlooker is continually walking up and down with the strap in his hand, and his office is to strap the children on

to their labour. The children could not be kept so long to their labour, if they were not so treated. It was reckoned by the children to be very bad usage; towards the end of the day the flies of the machines would burst their knuckles. Accidents were frequent. The children were not capable of performing the amount of labour that was exacted from them, without perpetual cruelty. I had at that time similarly occupied a brother and a sister, his name was John, and her name was Charlotte. I cannot say how old my sister was, when she began to work in the mill, but my brother John was seven. They were often sick; my brother John died three years ago—he was then sixteen years and eight months old. My mother and the medical attendants were of opinion that my brother died from working such long hours, and that it had been brought about by the factory. They have to stop the flies with their knees, because they go so swift they cannot stop them with their hands; he got a bruise on the shin by a spindle-board, and it went on to that degree that it burst; the surgeon cured that, then my brother was better. He went to work again, but when he had worked about two months more his spine became affected, and he died. His medical attendants state that that spinal affection was owing to his having been so over-laboured at the mill; and that he died in consequence.

“ Mill labour has had a great deal of effect on my own health, I have had to drop it several times in the year. When I had worked about half a year, a weakness fell into my knees and ankles; it continued, and it has got worse and worse. It was attended with very great pain, and the sense of extreme fatigue. Under these circumstances I had to work as often as I could, otherwise not any allowance would have been made to me by the occupier of the mill. I live a good mile from the mill; it was very painful for me to move; in the morning I could not walk, and my brother and sister used out of kindness to take me under each arm, and run

with me to the mill, and my legs dragged on the ground in consequence of the pain; I could not walk, and if we were five minutes too late, the overlooker would take a strap, and beat us till we were black and blue. The overlooker knew the occasion of our being a little too late; we have stated to him the reason, but he never minded that, he used to watch us out of the windows. The pain and weakness in my legs increased.

[The witness, by request, stood up and showed the committee his limbs.]

“I was as straight and healthful as any one when I was seven years old. There were other children at the mill who became deformed in like manner. There were some very often sick, and some were deformed; but the parents who were able to support their children took them away; in consequence of seeing that they would be deformed if they did not take them away. My mother being a widow, and having but little, could not afford to take me away. The parish would not have relieved me if my mother had taken me away. She has frequently been to the parish authorities, but she was no better for it. I have seen my mother weep oftentimes, and I have asked her why she was weeping, but she would not tell me then, but she has told me since. She was so affected by seeing my limbs give way by working such long hours.

* * * * *

“The overlookers, under whom I have hitherto worked, have been in the habit of strapping and cruelly beating the children for very little faults; for being late in the morning, and for letting the ends run down. One part of the discipline of those mills is profound silence; they will not allow the children to speak: if two are seen speaking, they are beaten with the strap. The masters encourage the overlooker to treat the children in that manner. I have seen them when the master has been standing at one end of the room, and two

of the overlookers speaking to him, and if he has chanced to see two girls speaking to each other, he has said, 'Look yonder at those two girls talking,' and he has run and beat them the same as they beat soldiers in the barrack-yard for deserting. The strapping was principally going on in the morning, from half past five to six ; for if there were twenty that were too late, they would all be beaten. There was strapping in the after part of the day also ; it began about three o'clock, and continued then till the time that they dropped their work—very cruel strapping. If they had not strapped the children they would have fallen asleep.

"Out of the thirty minutes allowed for dinner, five minutes and sometimes ten were occupied in cleaning the spindles. On Saturday night we gave over at six o'clock, after which time we used to be made to fettle the machines, which took an hour and a-half. Sometimes, during the time I worked at Bradley mill, the clock was a quarter of an hour too soon in the meal-time; we had just done fettling, and we had but half got our dinners, and the overlooker put the clock forward to one, and he rang the bell, and we were obliged to run back to our work. This was not an uncommon practice. During the two years and a-half I was at that mill, there were about a dozen of the children who died. The owner of the mill did not send after these children to inquire after them, or to relieve them when they were disabled by their long-continued labour—they lived sometimes for two or three months after they left. If any one had taken an account of the deaths at the mill, the deaths of those children would not have been included in that statement. They did not die in the mill; but I knew one boy who died when he had been out of the mill only two days ; he was stuffed up by the dust. There is considerable dust in that employment; you cannot take the food out of your basket or handkerchief but what it is covered with dust directly. This circumstance renders the more necessary that we, the children, should have

time to eat our breakfast and 'drinking,' which are brought to us, but they will allow us no time, and we have to bite our food as we can; it is laid up on the board—sometimes the 'flue' gets into it, so that we cannot eat it. The children are frequently sick because of the dust and dirt they eat with their meat. If they were allowed a little time to get their breakfast and 'drinking' in, they could then go out of doors and get the meat clean and comfortable, and the dust would not get into it. The children ate their dinner on the boiler-house thatch or anywhere, as they could not go home. I lived a good mile off. In winter we, the children, ate our dinner sometimes out of doors, and sometimes in the mill.

"When I gave over attending the 'throstles,' I worked at 'bobbin winding' at the steam looms. The labour was continued the same length of time, from five in the morning to eight at night. When trade was brisk, I have worked from five in the morning to nine at night. For this additional hour's labour each working day I received, for the whole six months, tenpence halfpenny. This was the sum received by each, big and little, for the whole time. This was when I worked at the throstles. I was forced to work the additional hour. When we, the children, worked at the 'bobbin work,' we were not used so cruelly: there was no strap, only the overlooker was a very savage man, and he used to strike the children under the ribs, till it took their wind away, and they fell on the floor, and perhaps lay there for two minutes. All the overlookers are in the habit of treating the children with severity; the masters put them up to it, because they could not get the quantity of work done they wanted, unless they were to beat them.

"When I left Mr Addison's, Bradley mill, I went to Mr Brooks's upper mill, Huddersfield. At Mr Brooks's the usual time of labour for the children was twelve hours per day. We worked from six in the morning till eight at

night; we had half an hour to breakfast, an hour at noon, and half an hour at drinking time, making altogether twelve hours of actual labour. The hours were too long, we could not stand them. I was ten years of age when I went there first; I remained nearly four years; I worked at Lewis's machine in the dressing department. I have stated the regular hours of working; when trade was particularly brisk I was obliged to work from five in the morning till half-past ten, sometimes till eleven, for four months together, and once all night. My regular wages was five shillings a week, and they gave a shilling extra for over-hours. I must either have worked those over-hours or left my place. It was the same in other places when trade was good. It is not easy to get a place, because there are so many boys; there is always somebody out of work. I found that labour to be very distressing to me, and it increased the pain in my limbs. It also increased the deformity which came upon me, and I have had to drop it several times for a fortnight together. They did not use the strap there, they used to strike with the fist and kick with the foot. During the time I worked there, I wished many times they would have sent me for a West India slave. I had heard the condition of the West India slaves described. I felt myself very much overworked, with insufficient rest, and very much injured by that length of labour. This rendered me very miserable in my mind, and I thought there could be nothing worse, and that there could not be worse slaves than those who worked in factories. On one occasion, I worked all Friday, Friday night, and Saturday.

“I left that situation. One morning I was between ten minutes and a quarter of an hour too late; the overlooker met me, he gave me a knock on the head against a step, and caused a great lump to rise; he said he would turn me off—‘a young devil for being too late;’ he followed me up

the steps, but he could not catch me; I ran round the steps to get away from him, and I left that place. I was then fourteen years of age. I was beat and kicked in the way I have described for having been too late. It is customary in some places to abate the wages; I do not think they did so at Mr Brooks's. I left that mill, and I went to Mr William Firth's, Greenhead, Huddersfield, and they began this rule. They bated the boys $1\frac{1}{2}$ d. for six minutes, and a man 3d.; and when it got to sixteen minutes, they doubled it—6d. for a man and 3d. for a boy—and it was doubled again when it got up to thirty-one minutes; then the forfeiture for a boy was $4\frac{1}{2}$ d.—and a boy's daily wages was 10d., 1s., and so on. I do not know whether the overlooker kept the fines or not; he used to take them when he paid the wages. I was beaten as well as fined for being too late. It was the general system in that mill, at times, to beat the children as well as stop their wages. They did not beat them so cruelly—they did not beat them with straps, but with their fists. The practice of stopping wages for being too late does not do away with beating, but they were beat most, where they did not pay the fines. The longest hours I worked at Mr Firth's were from five in the morning till nine at night. Two hours were allowed for refreshment—there were fourteen hours of actual labour. I left that employment, because I could stand it no longer; the weakness was so bad in my knees and ankles. I was obliged totally to give up work. I believe I should have died if I had not given up—the doctors have nearly cured me. I was placed by my mother under the medical treatment of Dr Walker, of the Huddersfield Infirmary. In that Infirmary they can only take into the house twenty at once, because there are not subscribers enough to enable them to take more, and there are so many accidents that they are obliged to take in; they would have taken me in if they could; they have twenty-two

in sometimes, but twenty is the regular rule. It is a new place. My mother got a recommendation from Mr Bradley Clay. It is nearly eleven weeks since I dropped work. Mr Oastler got me into the Leeds Infirmary as an in-patient, under the care of Mr Hey. He examined me, and said that my deformity was caused by the factory system. He said he thought he could have done me good if he had had me a few years ago ; there would have been means of bringing me straight. He said it was all from the factory system—working so long and standing so many hours. Mr Hey said, there were but poor hopes of me. Dr Walker says I never shall be right any more. The cause of my illness has been going on all along, but I have got rather worse since I was fourteen years of age. I cannot walk above thirty yards before my legs begin aching very bad, and then I cannot walk at all.

“When at the factory, I had not any opportunity of learning to read and write—only a little, on the Sabbath-day. I have tried to learn to write within these last ten or eleven weeks. I do not think that there is above one in a hundred in the factories that can write.

“I am now an in-patient in the Leeds Infirmary. There are cases similar to mine. There is one boy ; he is weak in the knees, the same as I am, but not quite so far gone ; he is under Mr Smith, I think, a surgeon ; and there is another boy in the same ward as I am, he was struck on the hip, by a slubber, with a billy-roller. There is another boy who was kicked by an overlooker with his foot, and his body was the same as if it was taken off, and set on behind him ; his body is twisted, and he goes upon crutches. I have been in the Leeds Infirmary a week last Saturday night ; if I had been this week at Leeds, I should have been a fortnight next Saturday. Last Tuesday but one there was a boy brought in about five or six o'clock in the evening from a mill. He had been caught with the shaft, and he

had both his thighs broke, and from his knee to his hip the flesh was ripped up the same as if it had been cut by a knife, his head was bruised, his eyes were nearly torn out, and his arms broken. His sister, who ran to pull him off, got both her arms broke and her head bruised, and she is bruised all over her body. The boy died last Thursday night but one, about eight o'clock; I do not know whether the girl is dead, but she was not expected to live. That accident occurred in consequence of the shaft not being sheathed.

* * * * *

“Dr Walker ordered me to wear irons from the ankle to the thigh; my mother was not able to get them, and he said he would write a note, and she might go to some gentlemen in the town and give them that note, and see if they would not give her something towards them; and so she did, and I got the bare irons made, and I was coming into the yard where I live, and there was a man who worked at the same place that I did asked me to let him look at them; I told him I could not get money to line them with, and he said, ‘I will tell you where there is a gentleman who will give you the money;’ he told me of Mr Oastler, and he said, ‘I will go and see if he is at home, that you may not lose your trouble.’ Mr Oastler was at home, and said I was to be there at eight o'clock in the morning, because he wanted to go off on a journey; I got there about half-past eight. Mr Wood of Bradford gave me a sovereign. Mr Oastler asked me what my lameness came on with, I told him. and he happened to mention it at the county meeting at York. My master saw it in the newspaper, and he sent the foreman to our house where I lived; he had not patience to read it, and he said to my mother, ‘I suppose it is owing to our place that your Joseph got the use of his limbs taken away,’ and my mother said he was informed wrong, that I had my lameness before I went to that factory; but he said, ‘If Joseph has

said anything about our factory we shall certainly turn him off, and both his brothers.' I have two little brothers working at the same place. He said he did not know exactly how it was, but he would go back and see the paper himself, and if he found out that I had said anything about the factory system, *we* should be turned off. I have not been turned off, but my master will not speak to me or look at me; I do not know whether he will let me start again or not. My brothers have not been turned off.

* * * * *

"I had one of my arms broke. I was working at what is called a brushing-mill; there is a pin they put into the roller to make it run round, and the pin caught my sleeve, and twisted my arm round and broke it, and another boy has had his arm broken in the same way. At Mr Brooks's mill they cannot break their arms by that part of the machine, owing to a different arrangement. There was a boy who, to 'fettle' the machine, was kneeling down, and a strap caught him about his ankles, and carried him round the wheel, and dashed his brains out on the floor. These accidents usually happen at the latter end of the day; the children get tired—that boy got killed at a quarter-past seven at night. I have worked ten years in mills, and have in all cases been required to labour longer than my strength could bear. I have been rendered ill, deformed, and miserable by the factory system, as at present pursued. Oh! if I had a thousand pounds I would give them to have the use of my limbs again."

Benjamin Gummertsil:—

"I reside in Bowling Lane, Bradford, in Yorkshire, and am now sixteen years of age. I have been employed in piecening at a worsted mill. I have worked at Mr Cozen's mill; the hours of labour were from six in the morning to seven, and half-past seven and eight at night; half an hour

was allowed at noon for dinner—not any time was allowed for breakfast or ‘drinking.’ As a child, I found the employment hard and laborious. I entered the mill at nine years of age; my father was obliged to send me to the mill in order to keep me. If we are higher than the frames, we have to bend our bodies and our legs, so. [Here the witness showed the position in which he worked.] I was a healthy and strong boy before I went to the mill. When eight years old, I could walk from Leeds to Bradford without any pain or difficulty, and did not in consequence feel much fatigue. I had worked about a year at Mr Cozen’s mill for those long hours, before I found my limbs begin to fail. The failing came on with great pain in my legs and knees; I felt very much fatigued towards the end of those days—then the overlooker beat me up to my work. I have been beaten till I was black and blue in my face, and have had my ears torn. I have been cruelly chastised—once I was very ill with it. I was beaten because I had mixed a few empty bobbins, having not any place to put them into separate. I was generally beaten most at the end of the day, when I grew tired and fatigued. In the morning I felt stiff, very stark indeed; I was beaten in the morning as well, but not so much as towards the latter end of the day. I continued to attend the mill after my limbs began to fail. After I became deformed, I did not get on so well with my work as I could before. I got less in height, I cannot exactly say how tall I am now, I have fallen several inches in height. I had to stand thirteen or fourteen hours a day frequently, and was constantly engaged as I have described. [The witness, at the request of the Committee, exhibited his limbs, ‘and they appeared to be exceedingly crooked.’] I was perfectly straight before I entered upon this labour. There were other boys deformed in the same way. There

was another boy going in the same way that I am, and there was another with one leg out and another in. A good many other boys suffered in their health, in consequence of the severity of their work. Other children have suffered, though not to the great extent that I have done. I have two brothers and two sisters who work in Mr Cozen's mill. They have not suffered in the same way that I have done. I have a brother that was working at a mill that was going the same way, but he recovered after he left. I have not any other brothers and sisters who are unhealthy—they are all straight besides myself. I cannot recollect my mother—my father is not deformed. I cannot write, I have not had any opportunity of learning. I can read some little, but very poorly. I am now supported by helping my sister to knit heels to weave with. I have sometimes pains in my limbs now; when I stand I have very much pain. I was working long hours when this deformity came on: when my legs got bad, I worked all the same hours, they were not shortened; sometimes I was bad and was forced to go home. The master nor the overlooker never sent the doctor to me, nor do they make me any allowance now. I went once to the doctor, Mr Blakey, to see if he could do me any good, or give me a recommendation to the Dispensary; and he said they had called a committee for a boy like me before, but they could not do him any good. My father sent me to the doctor—Mr Blakey is one of the doctors of the Dispensary. I have been seen by Dr Beaumont, at Bradford; he looked at me, he said that he could not do me any good. I am quite sure that this pain in my limbs and this grievous deformity have resulted from long labour; that is the opinion of my father and all my friends, and of all the medical men that have seen me.

“I have two sisters who worked the same hours at the

same mill, they have not suffered in their health. They did not do the same kind of work ; the one was a warper and the other a reeler. They had not to stoop so much as I had. I was a strong boy when I went to work, and I am sure ten hours a day labour was enough for me as a strong boy. I had five shillings and sixpence a week wages, and then I left and went again, and they gave me four shillings and sixpence, because I had got worse in my limbs. When I was nine years old, I first went into the mill. I got two shillings the first week when I was learning, and then I kept getting raised as I could work better. I worked as long for my four and sixpence as I did for my five and sixpence. When I began to be deformed and crooked, they gave me a stool to sit on, to enable me to reach my work. I could not work now while sitting. When we had all our ends up, there was a stool at top, and I went to sit me down there I cannot now stand without crutches or a stick, or something to lean against. I cannot walk at all. I cannot get up stairs except I creep up upon my hands and knees, or backwards way, which I do every night."

Elizabeth Bentley :—

"I am twenty-three years of age, and live at Leeds. I began to work at Mr Busk's flax mill when I was six years old. I was then a little 'doffer.' In that mill we worked from five in the morning till nine at night, when they were 'throng;' when they were not so 'throng,' the usual hours of labour were from six in the morning till seven at night. The time allowed for our meals was forty minutes at noon ; not any time was allowed for breakfast or 'drinking:' these we got as we could. When our work was bad, we had hardly any time to eat them at all : we were obliged to leave them or take them home. When we did not take our uneaten food home, the overlooker took it and gave it to his pigs. I

consider 'doffing' to be a laborious employment. When the frames are full, the 'doffers' have to stop them, and take the 'flyers' off, and take the full bobbins off, and carry them to the roller, and then put empty ones on, and set the frame going again. I was kept constantly on my feet; there were so many frames, and they run so quick, the labour was excessive, there was not time for anything. When the 'doffers' flagged a little, or were too late, they were strapped. Those who were last in 'doffing' were constantly strapped—girls as well as boys. I have been strapped severely, and have been hurt by the strap excessively. The overlooker I was under was a very severe man. When I and others have been fatigued and worn out, and had not baskets enough to put the bobbins in, we used to put them in the window bottoms, and that broke the panes sometimes; and I broke one one time, and the overlooker strapped me on the arm, and it rose a blister, and I ran home to my mother. I worked at Mr Busk's factory three or four years.

"When I left Mr Busk's, I then went to Benyon's factory; I was about ten years of age, and was employed as a weigher in the card-room. At Benyon's factory we worked from half-past five till eight at night, when they were 'throng' until nine. The spinners at that mill were allowed forty minutes at noon for meals; no more time throughout the day was allowed. Those employed in the card-rooms had, in addition to the forty minutes at noon, a quarter of an hour allowed for their breakfast, and a quarter of an hour for their 'drinking.' The carding-room is more oppressive than the spinning department: those at work cannot see each other for dust. The 'cards' get so soon filled up with waste and dirt, they must be stopped or they would take fire: the stoppages are as much for the benefit of the employer as for the working people. The children at Benyon's factory were beat up to their labour with a strap. I have seen the overlooker go to the top end of the room, where the little girls

‘hug’ the can to the ‘backminsters ;’ he has taken a strap, and a whistle in his mouth, and sometimes he has got a chain and chained them, and strapped them all down the room. This was done to those children who were ‘hugging’ the cans. It was in the afternoon ; the children were excessively fatigued : they were too slow, and the overlooker was angry with them. The girls have many times had black marks upon their skins. Had the parents complained of this excessive ill-usage, the probable consequence would have been the loss of the employment of the child. Of this result the parents were afraid.

“ I worked in the card-room ; it was so dusty that the dust got upon my lungs, and the work was so hard. I was middling strong when I went there, but the work was so bad ; I got so bad in health, that when I pulled the baskets down, I pulled my bones out of their places. The basket I pulled was a very large one ; that was full of weights, upheaped, and pulling the basket, pulled my shoulder out of its place, and my ribs have grown over it. That hard work is generally done by women : it is not fit for children. There was no spinning for me, and I therefore did that work. They gave me five shillings a week, the women had six shillings and sixpence. As a spinner, I had got six shillings. The hands were constantly leaving, because of the unhealthy nature of their employment, and the excessive labour they had to endure. The employment made us very thirsty : we drank a deal of water in the room. It was not so very hot as in the summer time. In the winter it was necessary to have the windows open ; it made no matter what the weather was, and sometimes we got very severe colds in frost and snow. We were constantly exposed to colds, and were made ill by that cause also. Then I had not much food to eat, and the little I had I could not eat it, my appetite was so poor. My food being covered with dust, it was no use to take it home. I could not eat it, and the overlooker took it, and gave it to his

pigs. I am speaking of the breakfast. I could not go home to dinner.

“I lived two miles from the mill. We had no clock. If I had been too late at the mill, I would have been ‘quartered.’ I mean that if I had been a quarter of an hour too late, a half an hour would have been taken off. I only got a penny an hour, and they would have taken a halfpenny more. I was never beaten myself. I have seen the boys beaten for being too late. I was generally at the factory in time. My mother has been up at two o’clock and at four o’clock in the morning. The colliers used to go to their work about three or four o’clock, and when she heard them stirring, she has got up out of her warm bed, and gone out and asked them the time ; and I have sometimes been at Hunslet Car at two o’clock in the morning, when it was streaming down with rain, and we have had to stay till the mill was opened. Had the hours of labour been moderate, I could have awoke regularly. It was a matter of anxiety and difficulty for me to arouse myself early enough for those hours of labour.

“I am considerably deformed in person in consequence of this labour. I was about thirteen years old when my deformity began to come on, and it has got worse since. It is five years since my mother died, and she was never able to get me a pair of good stays to hold me up ; and when my mother died I had to do for myself, and got me a pair. Before I worked at a mill I was as straight a little girl as ever went up and down town. I was straight until I was thirteen. I have been attended by a medical gentleman, Mr Hare. He said it was owing to hard labour, and working in the factories. He told me so. I was coming from Leeds, and he asked a good many questions. He asked me if I had a father and mother ? I said, no. He said if I had no objection he would take me in hand. I said I was much obliged to him. He told me to come to his house that night ; and I went to the mill, and told them I was going to stop away.

I stopped at home ten weeks, and my cousins, that I was living with, had to maintain me, and they told me they were sure he would not do me any good, and they could not find me with support ; and Mr Hare told me it would be a year before I should be straight again. I was obliged to return to my work. It was two years ago that Mr Hare saw me ; I was then twenty-one. I cannot express the pain I had all the time that the deformity was coming upon me.

“I next began to work at Tatham and Walker’s flax-mill. I went into the spinning room. When they were busy, the hours of labour there were from half-past five in the morning to eight and half-past eight. I have seen the children strapped in that mill, the ‘doffers’ as well as others. The children could not be kept up to their work unless they were beaten. The period allotted for refreshment at that mill, and at the time to which I allude, was forty minutes at noon in winter, and half an hour in summer. Since the factory agitation began, time has been allowed for breakfast and ‘drinking.’ When they were much thronged in winter, the hours of work were from six in the morning to seven or eight at night. The children were occasionally brought in from their meals before the time was up ; they were sometimes whipped in out of the mill yard ; the overlooker has got a strap, and gone out and strapped them in before their time, that they might come in and get on with their work.

“I have had the misfortune, from being a straight and healthful girl, to become very much otherwise in person. I do not know of any other girls that have become weak and deformed in like manner. I have known others who have been similarly injured in health. I am deformed in the shoulders ; it is very common indeed to have weak ankles and crooked knees, that is brought on by stopping the spindle.

“I have had experience in wet spinning—it is very uncomfortable. I have stood before the frames till I have been wet through to my skin ; and in winter-time, when myself and

others have gone home, our clothes have been frozen, and we have nearly caught our death from cold. We have stopped at home one or two days, just as we were situated in our health; had we stopped away any length of time we should have found it difficult to keep our situations.

“I am now in the poor-house at Hunslet. Not any of my former employers come to see me. When I was at home, Mr Walker made me a present of 1s. or 2s., but since I left my work and have gone to the poor-house, no one has come nigh me. I was very willing to have worked as long as I was able, and to have supported my widowed mother. I am utterly incapable now of any exertion of that sort, and am supported by the parish.”

Mr Gillett Sharpe, Keighley, examined:—

The witness having detailed the results of excessive labour on members of his own family, was asked:

“Have you reason to think that any of the children lose their lives in consequence of this excessive degree of exertion?—I have no doubt in my mind that such has been the case, and I may mention one instance of the kind. Four or five months back there was a girl of a poor man’s that I was called to visit; it was poorly; it had attended a mill, and I was obliged to relieve the father in the course of my office (assistant-overseer), in consequence of the bad health of the child; by-and-by it went back to its work again, and one day he came to me with tears in his eyes: I said, ‘What is the matter, Thomas?’ He said, ‘My little girl is dead.’ I said, ‘When did she die?’ He said, ‘In the night; and what breaks my heart is this, she went to the mill in the morning, she was not able to do her work, and a little boy said he would assist her if she would give him a halfpenny on Saturday; I said I would give him a penny,’ but at night when the child went home, perhaps about a quarter of a mile, in going home she fell down several times on the road through exhaustion, till at

length she reached her father's door with difficulty, and she never spoke audibly afterwards; she died in the night.

"What was the illness of the child when you saw it at the parent's house?—It seemed to be exhaustion, general debility, and weakness of body.

"Was there any medical person called in to visit her?—Yes; he asked me to send a doctor to visit her, and give her what he thought proper.

"What was the doctor's opinion?—I do not know, I never spoke to the doctor; he gave her something, and she got better then.

"You cannot say what was the matter with her?—No, but I could not help noticing, and it brought tears to my eyes, though the child did not belong to me, to think that she should have to work the last day of her life under such circumstances.

"Do you believe her indisposition was caused by working in the factories?—If she had been at home, instead of being confined in the factory, she would have been in a different situation.

"How old was the little girl?—I cannot speak exactly to her age, I judged she might be ten years old.

"How long was this mill working in the day?—I cannot speak to that; I have no doubt it worked from six to seven.

"Had the child any specific disease that you know of?—No, I do not know that she had."

Among the more systematic modes adopted to procure the greatest quantity of labour from the exercise of the faculties of little children, the following deserve special attention. In their own horrible way, they have a claim to be considered "improvements" upon the vulgar and common practices of beatings with leather straps, blows with billy-rollers, and like means of punishment. Mr James Turner, from Manchester, in the course of his examination by the Committee, stated that it was well known that other means than beating were adopted "to get as much work

out of the little infants as possible," a statement which gave rise to the following questions and answers:—"What do you mean by other means?—Other means besides coercive means. It is quite common in the mill, for instance, to give prizes to those that can do the most work in a fortnight or so. Last Saturday three weeks, two of these boys had been striving, for three pounds of bacon and three score of potatoes, which could do the most work for a fortnight; the prize was decided on that day, and the little boy that had won it had often complained, when he got home, that he could hardly get to bed. Then when the two boys have done this quantity of work, the overlookers almost insist that others should do the same. The girls they will give dolls to: they get two dolls, a big one and a little one, and hang them up on the frame, and those that do the most work get one of these dolls. This boy that I named, his name is Griffiths, that had won the bacon, he also had won on a former occasion half a peck of meal and some sugar. This is done to get as much work out of the little children as ever they can, and then when part have done it, they consider that all can do alike; and they almost insist on their doing so, and use them harshly if they do not do so much work as those have done for their prizes.

"So that the children are on the one hand coerced, and on the other hand tempted, to perform more labour than is consistent with their health?—Most certainly they tempt one, and then coerce the rest; this is a general practice at Longworthy and Co.'s, a large silk mill that we have in Mosley street.

"Is it so in the cotton mills?—No, it is not; I never knew it done in the cotton."

Jonathan Downe examined:—

"When you worked in mills, what methods were taken

to rouse the children from drowsiness?—It is a very frequent thing at Mr Marshall's, where the least children are employed (for there were plenty working at six years of age). It has been the regular practice of late years for Mr Horseman to start the mill earlier in the morning than he formerly did; and provided a child should be drowsy, the overlooker walks round the room with a stick in his hand, and he touches that child on the shoulder, and says, 'Come here.' In the corner of the room there is an iron cistern; it is filled with water, so that if any fire should occur in the room, they could quench it with that water: he takes this boy, and holding him up by the legs, dips him over head in the cistern, and sends him to his work for the remainder of the day; and that boy is to stand dripping as he is at his work—he has no chance of drying himself. Such, at least, was the case when I was there.

"In addition to the beating, have you known any other methods of punishment resorted to for presumed offences?—Yes, that first is for drowsiness, the second is for any other offence that may occur in any other room in that mill; I never saw it in any other place; it is just according to their crime, great or small. There is a stool fixed up at one end of the room, the boy who offends is put to stand on this stool, sometimes on both legs, and sometimes on one of his legs, with the other up, and he has a lever to bear in his arms, thus [here the witness exhibited the position by elevating his arms above his head], and there he is to stand for ten minutes, or a quarter of an hour, or half an hour, just according as the overlooker chooses; and provided he should lower his arms, and it is a great weight to bear for a quarter of an hour, I have seen the overlooker come this way and say, 'Hold up,' and sometimes the boy will strive to hold it up and not have strength to raise it, and the overlooker has a stick or strap, and cuts him till he does actually get it up, and the tears will run down his face when he is there standing. I have seen it

there frequently, and it is the regular practice.—In what mills have you seen it?—At Mr Marshall's, of Shrewsbury; frequently in that mill."

Children so excessively worked were, in consequence, subjected to increased risks from machinery. It was proved in evidence that limbs would be sometimes caught by wheels in motion; that these were frequently torn to pieces. William Swithinbank, a cloth-dresser from Leeds, was asked, "Have you had any children in your family that have met with accidents at their work?—Yes, I have one boy that met with a very serious accident; it was at a machine called a crab, that the stuff goods go through; it pulled him in and caught his arm, and it tore it all to bits; it tore the veins from the arteries, and tore the muscles from the arm out; it was all torn. Have any other accidents of that sort happened there?—Yes; another boy, at the same crab, got killed, and another got his arm torn off."

A question naturally suggests itself,—Was the supply of labour so much below the demand as to render this excessive labour necessary for the purposes of manufacture and commerce? The reverse was the fact; the supply of labour was, under the arrangements then common, greater than the demand, a circumstance quite in keeping with the results. Eleven hours was the usual day's work in the woollen factories of Leeds; to this rule there were exceptions. It was the custom, with few exceptions, in Bradford, to work on Good Friday and on Christmas-day, a circumstance which, perhaps, as much as any other, proves how thoroughly the whole of life, in the case of the factory children, was devoted to labour.

It was amply proved before the committee, that the treatment of those engaged in factory labour was not improving. William Kershaw, of Gomersal, whose experience ranged over a period of half a century, was on this head very decided; the same witness declared that he was not "in any

point of view a free agent," that he had "no alternative but of submitting" to allow his children to work "long and pernicious hours of labour, or allowing them to starve for want of necessary subsistence,"—an affirmation strictly reasonable. It is impossible to conceive a free agent, endowed with moral sense, capable of allowing his offspring to be ruined physically, morally, and mentally for any consideration. It must have been with no ordinary feelings of anguish that William Kershaw informed the committee that the "conduct of his daughters was far from satisfactory; impudence and immorality of every description appeared to be their growing characteristics." Many witnesses gave painful testimony, the result of personal observation, to the factory system being a prolific and an increasing source of drunkenness, prostitution, and indecency. These evils existed side by side with a rapid increase of scientific, chemical, and mechanical knowledge applied to the purposes of production.

The Rev. G. S. Bull and Mr Richard Oastler were examined at great length; their evidence, as an exposition of the evils of the factory system, was comprehensive and complete. Before the Committee were presented a number of documents from Scotland, signed by the resident ministers of the gospel and the principal medical men of the districts to which these documents referred. The Rev. A. L. Gordon, of Aberdeen, had closely attended to the development of the factory system in Aberdeen, and gave very decided evidence on its injurious effects. As an example of the contents of the documents bearing the signatures of clergymen in Scotland, we select the following because of its brevity.

"Arbroath, 2nd May, 1832. The undersigned have no hesitation in offering it as their decided opinion, that the present extended hours of labour in the flax mills of this place have a most pernicious effect, both in a physical and moral point of view, upon the young persons employed in them. They have uniformly observed, that such young

persons want the healthful aspects of children not similarly confined. In respect of education, they are far behind what used to be the average advancement of the same class of children in this part of the country, and that their moral and religious condition is such as was to be expected in the case of persons who are removed from school to the unwholesome air and dangerous companionship of a manufactory, at the age which is most available for the formation either of virtuous or vicious habits. Although the practice of employing a great number of children in the mills is, in this place, only of recent date, yet enough has already appeared to prove that the tendency of such an unnatural system is to effect a rapid and certain deterioration of the race. And there is nothing of which the undersigned are more firmly persuaded than this, that if something is not speedily done to enable parents to resist the temptation or dispense with the necessity of sending their children to work in mills for a longer period than is consistent with the preservation of their health and the improvement of their minds, Parliament will have, at no distant day, to legislate for a population tenfold more ignorant, improvident, pauperized, and immoral than the present."

To this document was appended the names of the recognized heads of the Christian congregations of the town of Arbroath, churchmen and dissenters. Every one acquainted with Scotland will appreciate the worth of such evidence. The intimate connexion existing between the ministers of the gospel and the population of Scotland, enables the former to judge correctly of the actual position of the latter. It is well known that the question of education has, in Scotland, for ages, been a subject of the closest scrutiny; and the falling off in education, consequent on the increase of the factory system, was a serious and an appalling fact which christian ministers could not silently overlook.

The feeling of the operatives on the question may be

inferred from the statements of Mr James M'Nish, of Glasgow: "Are the operatives of the city of Glasgow generally considered favourable to a regulation and limitation of the hours of labour for children and young persons employed in the mills and factories of the place?—Yes; and to do justice to the cause, and to put on record what has actually taken place, and what would hereafter take place, I will state what would have occurred if Mr Sadler had not previously adopted some means, and moved for this Bill in the House of Commons. It was proposed by a great number of individuals in the various manufacturing districts; they had even brought forward plans to form extensive combinations to limit, on their own behalf, the labour to ten hours per day. Circulars were printed, and about to be distributed; but when it was seen that he had moved for such a measure in the House of Commons, they considered that they had better turn their attention to assist him in this measure, than attempt to legislate for themselves. The principal reasons that the agitators of the self-legislation had for coming before their fellow-operatives were, as they stated, that the slave population were legislated for and protected, that they had not to work more than ten hours per day, and that the children had not to work at all till they were fourteen years of age, and then only six hours a day; and they likewise showed their fellow-operatives the future state into which their children were springing up,—that they were left completely exposed; that their labour, which forms their principal property, was left completely open to be trampled upon by every avaricious employer as he chose; they were therefore determined to form as extensive a combination as they possibly could to reduce those hours of labour, for the benefit of themselves and their children. The tendency of those combinations I was opposed to as one of the individuals of the association; for I considered that the result of those associations would be a great evil to the

country. In the first place, they would cause considerable irritation between the labourers and the employers, and ultimately, I believe, lead to bloodshed; and indeed those combinations can never extend beyond the circle of the large manufacturing towns; they can never reach the master in the country. I have no doubt that they would have succeeded in reducing the hours of labour in towns, and brought the town manufacturers to the brink of ruin, and I believe it would have obliged the town manufacturers to have petitioned for this legislative measure at some period themselves, perhaps at no distant period after those town manufacturers had starved a great number of their operatives; and, perhaps, in return for this starvation, got some of themselves murdered for starving those men. For although such acts are frequently thrown upon combinations, they generally proceed from individual want; for a man with a starving family will stop, I believe, at nothing. We have had instances of this; therefore I am of opinion, that if this Bill does not pass, the town manufacturers will have to petition for such a legislative measure; but I believe pride will not allow them to petition until they are brought to the brink of ruin themselves, and the commerce of the country is likewise endangered. I have also to state, that it is my opinion that these combinations would be very hurtful to the country: they might be a ready tool in the hands of any demagogue for a political purpose, who had a few hundred pounds to distribute amongst them, and might endanger the government; and, therefore, in my humble opinion, it will be the interest of the government, the employers, and the operatives, that this measure should be carried into effect at as early a period as possible."

The question of the preservation of the health of the manufacturing population was necessarily a subject of the highest importance. In a national as in an individual sense, health of body ought to be a primary consideration. In

so far as machinery and manufactories contributed to national wealth, corresponding with the health and improved circumstances of those engaged in factory labour, machinery and manufactories were blessings, but on no account could the gain of riches to a few, be a compensation for the loss of health to the many. In considering manufacturing or any other kind of industry, the labourers employed should not be considered only as a means to an end ; they are human beings, endowed with faculties and feelings, and no branch of national industry can be, in a national sense, advantageous which does not directly contribute to their elevation. The upraising of the industrious ought to be the end of industry ; and that system of national economy in which riches are everything and man nothing, is, in its foundations, the contradictory of civilization, and in practice a violation of the doctrine that "Love worketh no ill," and opposed in spirit and deed to the truly wise philosophy expressed in the words, "But now are they many, yet but one body. And the eye cannot say to the hand, I have no need of thee ; nor, again, the head to the feet, I have no need of you." It is impossible to conceive a greater national curse than a system of industry under whose operation human beings are called into existence, reared into premature puberty, worked excessive hours, in circumstances opposed to health of body and mind, and the whole aim and end of their being tried by the one calculation of upon how little can life and the motion of a pair of hands be supported. The depression of living human beings to the material level of the lowest kind of factory furniture, is an act of the grossest blasphemy. It is the pride of a few persons in the vain conceit of their own inflated self-sufficiency, saying to many of their fellow-creatures, "God made us a little lower than the angels, and so far as we can, we will make you much lower than the beasts that perish." Among the most desirable objects of civilization

is the increase of the consciousness of the moral responsibility of man, of his dignity as man, the enrichment of his birth-right as a responsible, rational creature, born into the world possessing properties capable of improvement. When these results are not realized, to talk of civilization is an absurdity; under the unregulated factory system, men, women and children were degraded to the level of means and things, the personal *chattels* of a favoured few.

The evidence of the medical men examined before the Sadler committee of 1832, constitutes a cyclopædia of physiological, social, and moral knowledge, by the most eminent professional men of their age in the departments of anatomy and medicine. All were unanimous in their condemnation of the factory system—all agreed that factories were “nurseries of feeble bodies and fretful minds.” This invaluable evidence does not allow of condensation, it is a monument of the extraordinary knowledge and intelligence of the highest order of scientific physiologists and anatomists, and we will not venture to separate the stones of the structure. Mr Sadler has often said, “To have succeeded in collecting that body of medical evidence is worth all my labour, anxiety, and sacrifice.”

The following placard was widely circulated; its contents prove the conclusiveness of the highest medical opinions on the subject of the hours of labour, and shows the use made of the medical evidence by the supporters of factory regulation:—

“TABLE OF MEDICAL OPINIONS AND TESTIMONY before the Select Committee on the Ten Hours’ Bill.

“Sir Anthony Carlile, F.R.S., principal Surgeon of Westminster Hospital forty years: ‘More than ten hours is quite incompatible with health and moral propriety.’ . . . ‘Every succeeding generation will be progressively deteriorated if you do not stop these sins against nature and humanity.’

“Sir William Blizzard, F.R.S., Surgeon to the London Hospital fifty years: Pronounces the present system of thirteen or more hours (including meals) to be ‘horrible.’

“Sir Charles Bell, K.G.H., F.R.S., Surgeon to Middlesex Hospital: ‘More than ten hours is painful in idea.’

“Sir George L. Tuthill, F.R.S., Physician to Westminster Hospital twenty years: Doubts very much whether ten hours will not be injurious to children under twelve years.

“Joseph H. Green, Esq., Surgeon to St Thomas’s Hospital, Professor K.C.: ‘I fear this country will have much to answer for in permitting the growth of the system of employing children in factories.’ . . . ‘From nine years to twelve not more than six hours should be allowed. Twelve is the utmost adults should labour.’

“James Blundell, Esq., M.D., Physician to Guy’s Hospital, Lecturer, &c.: ‘I look upon factory towns as nurseries for feeble bodies and fretful minds. Ten hours are enough for human beings.’

“Thomas Hodgkin, Esq., M.D. (of the Society of Friends), Physician to the London Dispensary: ‘Ten hours appears to be a proper time.’

“John Morgan, Esq., Surgeon to Guy’s Hospital: ‘Ten hours are injurious to young children of nine years’

“Benjamin Brodie, Esq., F.R.S., Surgeon of St George’s Hospital: ‘I think ten hours too much for children of ten years of age, and twelve too much for all.’

“William Lutener, Esq., Surgeon: ‘Will sanction eight or nine hours.’

“Samuel Smith, Esq., Surgeon to the Infirmary, Leeds: ‘Ten hours are too long, many will suffer under it.’

“William Sharp, jun., Esq., Surgeon to the Dispensary, Bradford: ‘I think it (ten hours) as long and perhaps longer than is consistent with their general health.’

“C. Turner Thackrah, Esq., Surgeon to the Infirmary, Leeds: ‘I should be very ill content with an Eleven Hours’

Bill. Children should not work at all—the least time the best.’

“J. Malyn, Esq., Surgeon: ‘Ten hours enough for those who are eighteen years old—too much for children of nine years.’

“P. M. Roget, Esq., F.R.S., late a Physician of Manchester Infirmary: ‘I should think that a child under nine years of age ought not to be subject to the labour of a mill or factory. Ten hours sufficient for any age.’

“John Elliotson, Esq., F.R.S., Physician to St Thomas’s Hospital: ‘Ten hours are as much as can be endured with impunity.’

“C. A. Key, Esq., Surgeon of Guy’s Hospital: ‘I should say ten hours is even more than they could sustain with impunity.’

“G. J. Guthrie, Esq., F.R.S., Surgeon and Vice-President of the Royal College: ‘Ten hours far too much.’ Testifies that the factory children are worked on an average longer than soldiers!

“John R. Farre, Esq., M.D., a Physician of forty-two years’ standing: ‘I think that to secure a vigorous manhood nine years of age is too early.’ . . . ‘In English factories everything valuable in manhood is sacrificed to an inferior advantage in childhood.’

“Thomas Young, Esq., M.D., Physician: ‘I think that ten hours is the extreme limit that ought to be allowed; it is quite enough for the healthy and robust, and too much for the feeble and delicate.’

“Benjamin Travers, F.R.S., Senior Surgeon of St Thomas’s Hospital: ‘I think it wonderful that ten hours can be endured.’ . . . ‘The bill would be advantageous to society at large.’”

The following address accompanied the placard:—

“Christians and Englishmen! Read, and be convinced, that a Ten Hours’ Bill must pass. Remember, besides the

above testimony, admitting of ten hours as the smallest limitation which can be sanctioned, there is the written testimony of nineteen medical men in Scotland, of the highest class, and of thirteen clergymen, besides that of many physicians, surgeons, ministers of the gospel, and humane factory masters, who have raised their voices for the bill at public meetings. There is also the evidence, given before the committee, of two clergymen, two gentlemen, forty-one Yorkshire operatives, seven from Lancashire, seven from Scotland, and five others, including three females, in all one hundred and seventeen witnesses, against the present factory system.

“Men of Great Britain! Here is the four-fold voice of science, humanity, Christianity, and bitter experience, in favour of a Ten Hours’ Bill. Will you suffer it to be drowned by the clamorous howl of avarice and selfishness? And will you suffer those who wish to represent you in parliament, to evade the question of a Ten Hours’ Bill? First, ask them, whether Christianity and humanity demand it; and then ask them, whether they will support it, or whether they will allow the influence of wealth to triumph over the highest sanctions which God or his creatures can give. After such testimony as the above (not to mention that which bears on the daily working of the system,—without producing aggravated and extreme cases), surely henceforth opposition must be utterly inexcusable. Christians! fathers! mothers! will you support the Ten Hours’ Bill, or renounce your religion and your names?”

The labour of Mr Sadler during the conduct of this enquiry was extraordinary; his days and nights were devoted, with but few and irregular intermissions, to incessant mental exertion. During the sittings of the committee, he was engaged in the trying process of constant investigation; when not so engaged, he was answering letters, giving audiences to deputations, often devoting whole nights to the correction of

the notes of the short-hand writers engaged in reporting the evidence of witnesses. Physiologists have affirmed that those engaged in willing labour, are strengthened by the emission from the brain of increased muscular volition, and are, in consequence, enabled to perform herculean tasks with comparative impunity. These efforts, however, we are assured, must be only occasional; they were in Mr Sadler's case, at the time referred to, habitual; his nervous system suffered irreparable injury. Though conscious of the injuries so sustained, often naming them in his correspondence with confidential friends, occasionally forced to call in his physician, at times so seriously indisposed as to alarm his medical attendant, and necessitate consultation, yet so intense was the ardour of this truly good man, so resolute of purpose was he, so alive to the importance of the work in which he was engaged, that he persevered to the last, always affirming, "This is God's work in which I am engaged, and therefore it must be done." The work was done as no similar labour before or since has been; its author, unfortunately, because of his zeal and perseverance in its execution, sapped the foundations of his physical strength. The change in Mr Sadler's appearance, consequent on the impaired state of his health, was painfully evident to his most intimate friends; of him it may be justly said, that he shortened his own days to lengthen those of others; that he worked excessive and unnatural hours, that others should have their hours of labour regulated to a reasonable limit. In this he may not have been personally wise, but the course of action was noble and self-sacrificing; nor was it labour in vain, for tried by the severest canon of the utilitarians, with whom he was in perpetual conflict, few men have, in their day and generation, been more useful than Michael Thomas Sadler;—"though dead he speaketh." Time has not blotted from the things that be, the records of the revelations of the cruelties, crimes, and horrors, which his patient industry brought to light, as

contained in the evidence taken before the committee on the Factories' Bill, which he originated; cruelties, crimes, and horrors, which his courage, talent, and determination, contributed in a great degree, most happily, to banish from the daily practice of some among the leading branches of England's manufacturing industry.

The opponents of factory legislation had promised to rebut Mr Sadler's statements, contained in his speech on the second reading of the bill. They did not even attempt to fulfil their pledge; the weight of evidence was so great as to paralyze opposition, by counter-evidence on the part of those engaged in manufacture. The opponents of the measure resorted to personal persecution of witnesses. The nature of this persecution will be understood by the following extracts from the reports of the proceedings in parliament. On the 30th of July, 1832, Mr Sadler, addressing the House of Commons, said :—

“I hold in my hands two petitions from individuals of the humbler ranks of society. These petitioners complain of dismissal from their employment, in consequence of having been summoned to give evidence before the committee on the bill for regulating the hours of labour of children employed in factories, and pray for some compensation. I want to know from honourable gentlemen, who may laugh, what course these men are to take to obtain redress who are summoned before parliament to declare the truth? I ask whether the summons is not imperative? I ask whether it is fitting that these individuals should be exposed to suffering and ruin without any indemnification being offered them?

“The first petition I shall present—and it is, perhaps, the first only of a series on the same subject—is from a person named Charles Stewart. It was suggested that this person should give evidence before the committee. He was a reluctant witness, but, nevertheless, conducted himself in

a most becoming manner; and, though absent from his work only so long as was required, found himself, on his return home, supplanted in his situation. This has been the case, too, with several others. This petitioner casts himself upon the mercy of the house. He states that he was called before the committee of this house, and upon the authority of the house—a summons which he could not evade—but that, in consequence of having given evidence conscientiously, he is deprived of his bread, and therefore prays the house to grant him some compensation.

“I hold in my hand a similar petition, of another individual, named Alexander Deans. I beg to say that this individual, without being a voluntary witness, was pointed out to me as a person whose evidence was desirable; and his name having been transmitted to me, which was without his knowledge, he was accordingly summoned. Having given his evidence he returned home as expeditiously as he possibly could, and now finds himself dismissed from his employment.

“I have several similar representations to those made in these petitions regarding other parties brought before the committee on this subject; and, so convinced am I of the accuracy of the circumstances stated, that I have declined bringing forward many important witnesses, under the apprehension of their being ruined for giving evidence before the committee now sitting.

“I beg leave to say that nothing could be more respectful than the manner in which the testimony of these witnesses was given in regard to their employers; and I may mention one instance, in particular, in which the witness said, ‘With regard to my employer, he is one of the best and kindest masters known in the business, and I hope that my testimony will not influence his mind against me.’ But it did so influence his master’s mind that he discharged him from his employ!”

Because of the resolution of Mr Sadler not further to expose the operatives to the risk of being deprived of the means of earning their bread for telling the truth, for *that* was the offence, the labours of the committee closed with the medical evidence. This attempt on the part of the master manufacturers opposed to factory legislation to stifle the truth by the persecution of witnesses, was to its authors disgraceful. Mr Sadler's case was more than proved; every statement made by him in parliament, was more than borne out from the lips of living witnesses. It is almost impossible to overrate the difficulty or the importance of discovering the truth on all questions in which the interests of the working classes are concerned. In the absence of trustworthy knowledge, remedial measures must be necessarily imperfect, probably inoperative or even mischievous. Citizens are apt to forget their duties to the State, in the excess of the love they have for themselves. Had the factory witnesses deceived the committee with glowing panegyrics on the comfort and harmony of the factory system, their own interest with their employers would not have been injured—on the contrary, they would probably have been improved. Of these persecuting factory owners it may be truly said, "They loved darkness rather than light, because their deeds were evil." That light which they feared and hated was found, and though not so full a flame, as in the absence of their coercive repression would have been kindled, yet it was clear and full enough to let all England see factory-made cripples, paupers, and criminals, and invigorating enough to stimulate the sympathies of a large proportion of the British public to energetic action, in support of a wise humanity, and the lasting interests of a desirable civilization. The Sadler Report is a becoming monument to the memory of its author: the tact and knowledge manifested by him in conducting the enquiry were very great, and not any work known to us on the social condition of

those engaged in factory labour, approaches to its value in point of information.

During the progress of Mr Sadler's parliamentary enquiry, the question was rapidly gaining ground out of doors. A society was established in London for the purpose of aiding the active friends of factory regulation, in the distribution of tracts and the concentration of public opinion. "The Metropolitan Society for the improvement of the condition of Factory Children" was honoured with the Duke of Sussex as patron, and William Allen, a distinguished member of the Society of Friends, and a man justly remarkable for his active benevolence, was president. On the 27th of June, 1832, Lord Morpeth presented a petition from the county of York, in favour of the Factories' Regulation Bill. His Lordship said, "This petition was of such an extent, and signed by so many thousands, that he could not say, in the ordinary language used in the presentation of petitions, that he now had a petition in his hand to which he requested the attention of the House. The petition was an immense roll, and lay on the floor, the noble lord holding the top of it only in his hand. The petition was signed by 138,652 names, and he knew by laborious experience that it measured 2,322 feet in length. The petitioners complained against the system of over-working children, and prayed for an immediate measure of relief. He had been convinced, from what had already occurred before the committee, that humanity demanded a speedy corrective of the evils to which the petition referred."

Mr George Strickland, M.P. for Yorkshire, declared "that he felt it as a reproach to this county that its children were not treated with kindness." A similar petition was intended for presentation to the Lords, and for that purpose was entrusted to his Royal Highness the Duke of Sussex. The history of the Yorkshire petition to the House of Lords is far from satisfactory. On the

6th of February, 1832, Mr Sadler had an interview with his Royal Highness the Duke of Sussex, on which occasion he avowed his desire to serve the cause of the factory workers, as advocated by Mr Sadler. His Royal Highness the Duke expressed "the most lively interest in the cause, and the strongest feeling of sympathy for the poor children," assuring Mr Sadler "that he felt it a great honour to have such a petition entrusted to him, and he should be proud to present it to their lordships, and to give it all the support of his influence." The operatives of the North appointed a deputation to wait on his Royal Highness. Mr Sadler corresponded with the Duke. It was finally arranged that the Duke should receive the deputation on the 7th of July, 1832. The following paragraphs, from the newspapers of that month, refer to the interview of the deputation with the Duke:—

"THE DUKE OF SUSSEX AND THE FACTORY BILL.—On Saturday, the 7th instant, the undersigned members of the Short Time Central Committee, of Leeds, waited upon his Royal Highness the Duke of Sussex, at Kensington Palace, to request his Royal Highness to present the great petition of the county of York, in favour of Mr Sadler's Factories' Bill, and to entreat his Royal Highness to support the prayer of the same in the House of Lords.

"Mr Oastler having stated to his Royal Highness the object which the deputation had in view, his Royal Highness, in a very complaisant and affectionate manner, replied as follows:—'I shall be exceedingly happy to support the prayer of the petition—it is a measure which I have very much at heart. I have several other petitions, which I delayed to present, as I thought they might have interfered with the Reform Bill; but as that is now settled, I shall take the earliest opportunity of presenting them, when I shall give the preference to the great petition from Yorkshire, and support it in the best manner I am able.'

“His Royal Highness then enquired ‘into the state of trade, and the condition of the working classes;’ to which Mr Oastler replied, ‘that trade was not much better, but it was his (Mr Oastler’s) opinion, that Mr Sadler’s bill was a measure calculated to lay a foundation for improvement.’

“His Royal Highness then kindly dismissed the deputation, who were very much delighted to find that royalty could feel for poverty.

“RICHARD OASTLER.

“WILLIAM OSBURN.

“DANIEL FRASER.

“JOHN HANSON.”

The Yorkshire petition was not presented to the House of Lords : “the reasons why” were not communicated. The petition was deposited in the Robing Room of the House of Lords, whither it had been conveyed by his Royal Highness’s express orders. The consistent benevolence of the late Duke of Sussex is beyond doubt ; his conduct in the case referred to it is not in our power to account for.

CHAPTER XIII.

REJECTION OF MR SADLER, BY LEEDS AND HUDDERSFIELD, UNDER THE REFORM ACT.—THE LATE MR JOHN FIELDEN, M.P. FOR OLDHAM, HIS PRINCIPLES AND CHARACTER.—THE REV. G. S. BULL, HIS PREACHING AND PRACTICE.—LORD ASHLEY AS THE PARLIAMENTARY SUCCESSOR OF MR SADLER.—RENEWAL OF THE FACTORY QUESTION IN THE HOUSE OF COMMONS.

THE author of the Reform Bill aimed at the accomplishment of an important organic change in the constitution of the country. Party interests and party influences were busily at work, and under the popular cry of "The bill, the whole bill, and nothing but the bill," was hidden the determination of the principal Whig families to secure for themselves ascendancy in the future government of England. It is natural for politicians of the highest order to desire the opportunity of practically applying their own cherished theories. The desire is honourable to those who entertain it ; politicians of the lowest order (the species is very numerous, and confined to no class or party) look for personal gain, no matter how acquired ; they are ready on the shortest notice to do the meanest work, for what is mildly called "a consideration." The Reform Bill received the royal assent on the 7th of June, 1832 ; in December, parliament was dissolved, and with the dissolution closed the parliamentary career of Mr Sadler. In parliament, Mr Sadler advocated a representation of industrial interests through the medium of varied qualifications, in opposition to

the ascendancy of any one class or rank of the people over the others. He opposed the Roman Catholic Relief Bill, from a belief that its operation would be dangerous to religious freedom; he maintained that that bill was opposed to a protestant constitution. In his speech on the condition of the agricultural labourers he had boldly told the landowners of their duties, and the failure of many in their fulfilment. His motion for the establishment of a poor law in Ireland had brought down on his head the ridicule of the self-styled "practical statesmen" of the time. The free-trading manufacturers of England, with few exceptions, treated Mr Sadler, because of his determination to bridle their ill-considered avarice by law, as an open enemy. Mr Sadler's efforts to be returned to the first reformed parliament, for Leeds and Huddersfield, were unsuccessful; he was in these towns ably supported, but the combined interests of the millowners opposed to factory regulation, the Ultra-Dissenters, and Roman Catholics, were greater than the support on the side of Mr Sadler. When in parliament he represented Newark, with the approval of the late Duke of Newcastle. Mr Sadler had many friends, and had his health been restored he would probably have resumed his parliamentary career at no very distant period; his absence from parliament was a subject of deep and continuous regret, he was the only able representative among known statesmen of a class of industrial questions, the discussion of which, in the House of Commons, was a public necessity. Not any more striking proof of the public interest felt in Mr Sadler's position as a "public man" could be named, than the fact, that a petition containing 40,000 signatures, addressed to the electors of Leeds, was sent from Manchester to Leeds during the election contest, praying for his return by that borough. The friends of the Ten Hours' Bill felt Mr Sadler's rejection by Leeds and Huddersfield to be a serious discouragement; they were, however, in some degree comforted by the return to the House of Commons, by the newly-created boroughs of Salford,

Oldham, and Ashton, of four staunch supporters of their cause: the late Mr William Cobbett, the late Mr John Fielden, of Todmorden, Mr Joseph Brotherton, and Mr Charles Hindley. The important services rendered by Mr Fielden to the Ten Hours' Bill cause, in and out of the House of Commons, demand a brief summary of his character and principles. The late Mr John Fielden, was the third of five sons of Mr Joshua Fielden, of Edge End, in the township of Todmorden and Walsden. The father was a member of the Society of Friends (of whom there were many in that part of the country), and brought up his family in his own religious opinions. He was himself what was called "a strong tory" in politics, but as the sons grew up in the midst of the political turmoil caused by the French Revolution of 1789, he found them one by one showing symptoms of opinions contrary to his own; and though he adhered to his own principles, he is said to have acknowledged towards the close of his life, "that his five sons, Samuel, Joshua, John, James, and Thomas, were as arrant Jacobins as any in the kingdom." About the year 1784, Mr Joshua Fielden began the manufacture of cotton; and the commencement of that vast pile of buildings, now known as *Waterside*, was three cottages, in one of which the elder Fielden began the business of cotton-spinning, which gradually increased to one of the largest concerns in the operation of cotton-spinning and manufacturing in England. Mr Sadler was a churchman and a tory, Mr Fielden was a dissenter and a radical. It was a feature of the factory movement, that party politics were forgotten in the desire for the public weal: this was the primary principle of "the Fixby compact," a principle at all times recognised as sacred and inviolable.

The late Mr John Fielden combined and represented in his own history two kinds of experience, he had worked as a factory operative, in his father's mill, and, therefore, in a limited degree, knew from personal trials, the sufferings endured by others. Many years of successful energy had

raised him to the highest position as a cotton manufacturer; he was shrewd and far-sighted on the exchange, had a quick and safe eye for business; among manufacturers and merchants, his words and deeds commanded attention and respect; among his own work-people at Todmorden, he was sympathising, friendly, and easy of access to all who had grievances or remonstrances to communicate; he felt that he was the trustee of the interests of those he employed, and was unceasingly watchful for their welfare. This two-fold knowledge of workman and manufacturer, enabled its possessor to judge of the feelings of employers and employed. Every important act in the life of the late Mr Fielden, was settled in the region of the understanding; fancy and inclination were at all times under salutary control; his intellect was cool, clear, and capable of great decision; his mind was stored with facts, these he applied to special purposes by the force of the will; few men had less of show, possessing so much of substance, intellectual and worldly; he united in a remarkable degree caution and boldness, never allured into speculation in the anxious hope of acquiring sudden riches; he seldom missed a favourable opportunity of profiting by the state of the market; he never desired to astonish, with boasting of the extent of his commercial transactions, and was never anxious to speak in tones of conciliation for the mere sake of pleasing others. Has England ever asked herself how much she is indebted to the class of men of whom the late Mr John Fielden, of Todmorden, was a type? This man, with small extrinsic aid, untiring energy, industrious habits, and sterling integrity, raised himself from obscurity to eminence as a manufacturer and merchant. In every market of the world where cotton or cotton fabrics were bought and sold, the name of Fielden was known; it was synonymous with probity and confidence, it was England representing honest dealing and courageous enterprise. Maybe, as the eye glances over the *Gazette*, and conscience feels ashamed at the frauds disclosed in the columns of the

daily press—not petty, vulgar thefts, but transactions by men of education and rank, compromising the commercial character of a nation,—perhaps the reader will pause to pay a tribute of respect to the merchant princes of the present generation, and to the memories of those in the past, who, like the late Mr John Fielden, of Todmorden, never promised what they failed to fulfil, who have distinguished between legitimate trading and commercial gambling, and who have brought into the marts of commerce the rectifying influences of duty and honour. Mr Fielden's principles of economical and commercial policy were the results of his own experience formulated into a system; that experience enabled him to construct authentic tables of that branch of manufacture with which he was connected; from details he ascended to principles, and was, in consequence of sincere convictions, a strenuous advocate for shortening the hours of labour in factories, a measure alike favourable, in his judgment, to the interests of the employers and the employed. Mr Fielden contended that a reduction of the working hours in factories was an indispensable condition of the future success of the cotton trade. In a letter, addressed to Mr Fitton by Mr Fielden, his views are very distinctly stated; to this letter we are indebted for the following extracts:—"Whether we look to the products of manual labour, as instanced in the case of the handloom weavers, or of manual labour aided by the most improved machinery employed in the cotton trade, we find that for a nearly three-fold quantity produced in 1832, the manufacturers, and their work-people, had a much less command over the first necessary of life (wheat), than they had in 1815, for little more than one-third of the quantity. Truly, it may be said, 'We labour for that which is not bread, and spend our strength for nought;' while those who tax us, and those who live on fixed incomes, get an additional increase of the fruits of our labours, more than correspondent with the increase of our production, and for which we receive no equivalent whatever. And can this

course of proceeding continue? No, it cannot. The manufacturers cannot go on in this course much further, however disposed they might be to do so; seventy parts out of one hundred, constituting the whole for labour, expenses, and profits, have departed between 1815 and 1832, both years inclusive, and many parts more will be found to have fled in 1833. . . Providence designed that the gifts she has bestowed on man for increasing his supply of the necessaries and comforts of life (by the invention and aid of machinery, or otherwise), should not be abused; and so surely as we take *improperly* from those who labour, and give it to those who do not labour, so sure will a day of retribution and vengeance overtake the oppressors."

Mr Fielden contended that an excess of production over demand was the great cause of low prices, low profits, low wages, that the home trade of the country was injured by the inability of the operatives to consume a reasonable proportion of the products of the industry of the working population; that no foreign trade was desirable beyond the exchange of the surplus articles produced by Englishmen, over and above the full supply of their own wants, for those other useful articles, of which the foreigner had too many; that a foreign trade, the basis of which was unlimited cheapness, could only be extended by an increase of the sufferings of the working classes; that "to place ourselves in a state of dependence on foreigners for articles of the first necessity, such as corn, to the injury of the home grower, and without any permanent advantage to the manufacturer, who by such a course would only exchange his home customer for a foreign customer; and as the former is more certain, and, in every sense, more to be relied on than the latter, to distress those engaged in agriculture and manufactures in this country, by an increase of such foreign trade to accomplish such an object, is to be guilty of the grossest folly imaginable. . . . What becomes of our host of new acquisitions in mechanical skill, great improve-

ments in machinery, and unprecedented increase in production—all excellent things when rightly directed, if the result which has hitherto followed be to continue, namely, the withdrawal of work altogether from some, and their degradation into paupers. The reduction of wages visited on those who are left to compete with the improved mode of production, consequent upon the adoption of the new machines, from which, lessened wages, starvation, misery, and crime, ensue ; and the increase of labour, without any increase of remuneration of those comparatively few in number who are fortunate enough to get work on the new machines. If such consequences cannot be avoided, then of one thing I am certain, that all our boastful improvements in machinery are not a blessing, but a curse to the productive classes, whose work is being constantly increased in intensity, and deteriorated in value, by the changes arising from these improvements. But a right direction may and ought to be given to those invaluable improvements, and the masters and workmen, by cultivating a good understanding with each other, and by union of effort, ought to do it for themselves, without seeking for legislative interference on the subject." It was a maxim of Mr Fielden, "That what society ought to do and failed in doing, it was the duty of government to realize if possible by law." He did not allow his regard for voluntary action to neutralize his legislative efforts. Mr Fielden had consequently supported all the endeavours for the restriction of the hours of factory labour by law, from the time of Nathaniel Gould. He was not a hasty convert to any cause, but once resolved, his support was certain and energetic. In 1836, writing of his earlier years, he said, "As I have been personally engaged in the operations connected with factory labour, that is to say, for about forty years, a short account of my own experience may not be useless in this place, as it is this experience which teaches me to scoff at the representations of those who

speak of the labour of factories as ‘very light, and so easy as to require no muscular exertion.’ I well remember being set to work in my father’s mill when I was little more than ten years old; my associates, too, in labour and in recreation, are fresh in my memory. Only a few of them are now alive—some dying very young, others living to become men and women; but many have died off before they had attained the age of fifty years, having the appearance of being much older—a premature appearance of age which I verily believe was caused by the nature of the employment in which they had been brought up. For several years after I had been to work in the mill, the hours of labour at our works did not exceed *ten* in the day, winter and summer, and even with the labour of those hours, I shall never forget the fatigue I often felt before the day ended, and the anxiety of us all to be relieved from the unvarying and irksome toil we had gone through before we could obtain relief by such play and amusement as we resorted to when liberated from our work. I allude to this fact, because it is not uncommon for persons to infer, that because the children who work in factories are seen to play like other children when they have time to do so, the labour is therefore light and does not fatigue them. The reverse of this conclusion I know to be the truth. I know the effects which ten hours’ labour had upon myself; I, who had the attention of parents better able than those of my companions to allow me extraordinary occasional indulgence. And he knows very little of human nature who does not know, that, to a child, diversion is so essential, that it will undergo even exhaustion in its amusements. I protest, therefore, against the reasoning, that because a child is not brought so low in spirit as to be incapable of enjoying the diversions of a child, it is not worked to the utmost that its feeble frame and constitution will bear.” Mr Fielden could express

his views on public questions in writing with force, as his published letters, and his work, entitled *The Curse of the Factory System*, testify. His common sense, a full share of which is far from a common possession, enabled him to apprehend the merits of public measures with a safe judgment. On the factory question his knowledge was so great and his earnestness so intense, as to raise his intellect to the level of genius. As a speaker, he was ignorant of the arts of rhetoric, but he could make himself understood ; was listened to with attention in the House of Commons ; his speeches when reported read agreeably, and were replete with facts, the weight of which was increased by his reputation for truthfulness and honesty of purpose. All parties agreed in aptly designating him, "Honest John Fielden, the radical member for Oldham." Mr Fielden's return to parliament was, by the factory operatives of the North, considered to be a most desirable result. In him they had implicit confidence ; his name was in their homes a household word, he was, from first to last, to them a judicious counsellor and faithful friend. In his own family circle, it was Mr Fielden's habit to cast aside the cares of the world, and enter heartily into the conversation of the hour. He would listen with delight to the prattle of his children—to amuse and instruct them was his most cherished enjoyment. As a husband, father, and friend, he was considerate, affectionate, and kindly in a remarkable degree.

It was the current opinion among the factory operatives of Yorkshire that the operation of the Reform Bill would not be favourable to their objects. They said,—“Experience has taught us that manufacturing capitalists, with some exceptions, are our opponents ; the Reform Bill will increase the influence of that body as a power in the state, and, therefore, prove injurious to our interests.” This opinion, however, did not produce lethargy : the operatives availed themselves of every possible opportunity

to question candidates on their intentions as regarded the Ten Hours' Bill. At every hustings in the manufacturing districts the Ten Hours' Bill was, by its supporters, made a cardinal question. This course contributed much to popularize the factory movement. It became apparent to every observer that Oastler and Bull were men who would be heard, and who when heard could make themselves understood. At this time Mr Bull was exceedingly active, and we feel bound to place on record our estimate of his character, principles, and labours, in so far as these are connected with the subject under consideration. The Rev. George Stringer Bull has devoted a large proportion of the active years of his manhood to the promotion of the interests of the working classes: the advocacy of no man could have been more disinterested than was the reverend gentleman's support of the short-time question. In the pulpit, in the press, or on the platform, few have, in the propagation of their opinions, been more successful. The heart of Mr Bull was in youth trained to feel for the poor, and his hand to administer relief, in his native parish, and under the paternal eye. When a boy he was a Sunday-school teacher, and was a connecting link between the pastor and the youth of the parish. When separated by the ocean from his own home, it was the custom of his former pupils and early friends, always to particularly desire his father to remember them most kindly to "Mr George," a circumstance which proves how thoroughly he commanded the affections of those with whom he was associated—a power, in his case, for good, which years have strengthened. The son of a rector in the Church of England, reared in an agricultural parish, near Ipswich, Mr Bull was early in life familiar with parochial duties. For several years the minister of an agricultural parish, Hessle, near Hull, before he removed to Hanging Heaton, near Dewsbury, and afterwards to Bierly, near Bradford, in Yorkshire, Mr Bull began his

personal acquaintance of a manufacturing district with a matured mind and the possession of a considerable experience of agricultural districts in all that come within the sphere of the duties of a Christian minister. This experience, united to trained habits of discrimination, enabled Mr Bull, from observation, to judge of the condition of the agricultural and manufacturing districts. He believed it to be the especial duty of a Christian minister to attend to the interests of the labouring population and to care for the poor. Mr Bull's openness of manner and strong sympathy with suffering at once wins and retains the confidence of working men. He possesses in a remarkable degree the power of illustrating his meaning by a constant reference to simple objects and the occurrences of every-day life ; has a rare gift of narrative ; his short tales are always interesting and instructive ; few men can equal him in original anecdote, or excel him in giving force to the strong points of his stories, which appear endless, and are authenticated with names, dates, and places, and bring forth the lights and shades of character with a wonderful felicity. Mr Bull is one of the most agreeable of companions, and when relating an anecdote his countenance has a particularly pleasant expression. He is a man of vigorous mind, united to physical energy and power of personal endurance. In summer, when pressed with work, he rises with the lark, and retires to rest late at night ; in winter, he is frequently in his study by four or five in the morning ; every hour of the day he is engaged reading, writing, visiting, relieving, teaching, preaching, or in the fulfilment of some other parochial duties. A quarter of a century back no man in England worked harder or more continuously than did "parson Bull, of Bierly." Few ministers of the gospel, in any age, have proclaimed the message of God to labouring men with more of earnestness than has Mr Bull. He is a bold man, and condemns all quacks, quackeries, and shams ; is prone, as he thinks it

desirable, to tell the rich and poor, plainly and fully, of their faults and shortcomings; he hates compromises and concessions in politics, pretext and hypocrisy in religion. He maintains that it is the duty of good men to make all measures, which in themselves are just and necessary, practical and efficacious; that a sincere belief in the truth of the Christian religion cannot fail to manifest itself in the performance of good deeds. It is but of little avail that political or religious opponents heap obloquy on the efforts of Mr Bull; he answers their attacks forthwith, and continues his course with unabated zeal. Few clergymen have been more virulently attacked than was Mr Bull during his residence in Yorkshire; no man ever suffered less in reputation from the pens of hostile critics. Mr Bull's political and religious opponents were the supporters of the unregulated factory system, or political economists of the Malthusian school. As to serve the cause of the factory children was, in his judgment, to serve the cause of God, Mr Bull felt, in conscience, bound to persevere; he was, consequently, an invaluable associate of Oastler and Sadler in their struggle for the relief of the factory operatives from oppressive labour.

From 1830 to 1841, the principal coadjutor of Mr Bull was Mr William Walker; their joint efforts in the press, and at public meetings, were of the highest value to the cause they desired to serve; not any two men could possibly be more distinct in mind—this was a source of strength to both. Mr Walker's methodical correctness, when united to Mr Bull's forcible expositions of factory wrongs, produced the most desirable results, namely, trustworthy statements supported with animation and power—necessary requisites to the formation of an intelligent public opinion.

It cannot be out of place to notice briefly the leading points of Mr Bull's observations on the condition of the agricultural and manufacturing population. In his time, the

comforts of the agricultural labourers had been lessened, the decrease of wages had been greater in proportion than the decrease in the price of the necessities of life. The farm-houses had been pulled down in many cases, or turned into cottages, "in very many cases the cottages had been pulled down." During seven years' experience in Bradford, Yorkshire, comforts had decreased, indecency and profanity were common. As regarded education, the comparison between the agricultural and manufacturing population was "incomparably in favour of the agricultural." "The circumstances of the agriculturist were far more favourable, in all the principal points of comparison, than those of the manufacturer; his rent was less, his expenses were less in respect to the value of food generally, which was always greater in densely-populated districts. With regard to milk, particularly in the agricultural districts, a man might procure the same quantity of milk, for the sustenance of his family, for one-half the price at which it could be procured in the manufacturing districts, and of much better quality; and this is a very great assistance to the family of the cottager. Then, again, the hours of labour in the agricultural districts, both for the adult labourer and for the juvenile labourer, were considerably less, and the hours of leisure and refreshment greater. They had, therefore, less to pay to a doctor, and they required proportionately less clothes, and they were altogether far more comfortable, even in the depressed state of agricultural wages, than the labourers of the manufacturing districts." "The residence of the agricultural labourer was, as a rule, incomparably more healthy and more comfortable than that of the manufacturing labourer."

When under examination before the Sadler committee, Mr Bull expressed his opinions on the factory system as follows: "I think there is a great deal of miscalculation with regard to the advantages of the manufacturing system to the poor, as at present carried on. Persons are apt to form their

estimate from the amount of wages received by the children of a particular family ; and when I have been accustomed to apply, as I sometimes do, and feel it my duty to do, to the overseer of the poor, or to some influential inhabitant of any parish, for relief or consideration towards any particular family, I have found that even they were not aware of the difference between an income derived from factory labour and an income derived from many other sources of employment. A factory child's income is subject to amazing diminution and deduction. I am accustomed to observe these things ; being frequently intrusted with the distribution of charitable funds, my inquiries are necessarily very minute, and I have found that the washing, the mending, the wear and tear, the shoes, and the different articles of wearing-apparel, connected with the employment of a factory child, form very heavy items indeed ; I have frequently calculated them, and compared my estimate of the expense with the parents of the children themselves ; and I believe that, taking the average of twelve years of age, the extra expenses of a factory child, beyond that of a child engaged in many other employments, will be very nearly two shillings per head a week ; and if the committee will permit me, as it is a matter of some importance perhaps, at least I presume to think it so, I would just say that with regard to these extra expenses, there is one particular point which ought to be considered, and that is the waste of the family meal ; in that it is not, in most cases, an united but a divided meal. In some cases it may be united ; where the children live very near the mill, they may go home and take it with the rest of the family ; but in by far the greater number of cases, the children take their meals to the mill, their breakfasts, their dinner, and their drinking, or else they are sent to them ; at all events the family meal is divided ; and those who are accustomed to estimate pence and half-pence in a meal, know very well that the division of a family meal is an expensive system in a cottage. If the

children all sit round a table, one may be more hungry than another; one may be supplied out of the deficiency of the appetite of another; but when a separate portion is sent to each child in a mill, it very frequently happens that that portion is the best that can be obtained in the cottage, and a great part of it after all is frequently wasted. I have been informed of some places where the overlooker keeps a tub for waste bread and victuals which the children bring to the mill, and supplies one or two pigs with the wasted meals. Now this, I presume, is all a dead loss to the cottage; and then another circumstance connected with divided meals, and which is a great source of expense and trouble, is the taking of those meals to the mill, the breakfast, the dinner, and the drinking; in fact almost every family is obliged to keep a messenger, if I may so speak, for that purpose; at all events, whoever takes the meals, that person is in so doing, a source of expense to the family; and taking all these circumstances into consideration, the wear and tear of clothes, the expense of divided meals, and the sending them to the mills, I conceive that factory labour is far less profitable to a family than any other labour; but if a remission of the hours of labour to ten hours a day can be obtained, then in very many cases, and in most cases, I believe, the children will be enabled to obtain their meals at home; many will be able to get their breakfast before they go; and an hour being allowed for dinner, the greater number will be inclined to go home to dinner, and will also defer their afternoon meal till they get home, so, hereby, there will be a considerable gain, or saving of expenditure, which is the same thing in the family economy."

On the question being put by the Chairman of the Committee to Mr Bull—"What effect do you think this system has in forming that character so important in every sphere of life, but to the poor man more especially essential, either with a view to his own comforts, or to the proper

bringing up of a family in the humbler circumstances of life—I mean that of the females who become wives at a subsequent period ?” Mr Bull replied, “I understand that I am asked what sort of a wife the factory child will make in process of time; in answer to which I wish to say that I should do injustice to many young persons who are brought up in the factory system, if I did not say that their industry, neatness, and disposition to improve themselves, are beyond the power of my commendation. I know several such, I have some such females employed for whom I do and ought to entertain the greatest respect; but I would say that these are exceptions to the generality of young persons brought up in factories; I would say that the generality of them are as unfit as they possibly can be to fill the important station of a cottager’s wife. How should they, considering the length of labour to which they are now subjected, from the youth up, until the time of their marriage, be able to learn the duties of the cottage ? I am acquainted with many that can scarcely mend a hole in their garments. I have heard it from their mothers and their relations, that they scarcely know how to darn a stocking; and I beg to state that I know a case in which the father of a child (to illustrate the system) was so anxious that his little girl should acquire the use of the needle, that during a considerable period, when he was confined at home himself by a lameness, he sat over her after her return from her work, with a little rod in his hand, and insisted upon her mending her stockings, although she was falling asleep continually, and when she nodded over it, he gave her a very gentle tap upon the head with the rod. Although this incident may appear trifling to some, which, however, I trust it will not to the committee, yet it is a just picture of the effects of the system upon the domestic habits of the poor. I would also state that it is an important fact, with which I am well acquainted, that in many cases the young women

employed in factories do not make their own clothes at all ; their working clothes they obtain at the slop shops which abound in the manufacturing districts, where ready-made clothes are to be had, and their Sunday dress is of course of a very smart description wherever they can afford it, and is manufactured by some notable milliner, who knows how to set those matters off to the best advantage. Thus they neither know how to make or mend a working dress, or to supply the wants of a family when they become the mothers of children."

Minuteness of detail is characteristic of Mr Bull, and gave to his speeches, lectures, and letters, on the factory question, real interest and value. By the opponents of factory regulation he was feared and abused—by its supporters, respected and beloved. The factory operatives placed implicit confidence in Mr Bull ; his services were called into requisition on all important occasions. After parties had been settled in the first reformed House of Commons, and public business had resumed its usual course, it was felt to be desirable to find a parliamentary leader of the factory question in the Commons. The late Mr Fielden was new to Parliament ; his known honesty and knowledge of the question were strong recommendations ; he desired to support rather than to lead, and was anxious that the subject should be renewed under the most favourable circumstances that were possible. To find a successor to Sadler was felt to be a difficult task, yet the necessity of finding a parliamentary leader was self-evident to all interested in the question.

The importance of the Factory question had gradually increased its proportions ; among scientific physiologists and statesmen in every civilized country, the subject received attention. Every country which had a national practice to palliate when by an Englishman charged with the crime, retorted by pointing to the English factory system. This kind of defence was very weak and reprehensible, but it was to

Englishmen vexatious, and contributed to force the minds of many to desire a change. National jealousies have caused much bloodshed ; they have also done some good ; they have sometimes obliged nations, for shame's sake, to amend their morals. John Bull is prone to talk against slavery, and in the reform times, was very full of patriotism, and, like a person proud of his reputation, John felt that the door must somehow or other be closed against reproach. Statements of cruelties which from the lips of Mr Oastler had been designated "visionary," had now been verified by indisputable evidence, though it was customary by the opponents of factory regulation, in the hope of destroying Mr Oastler's usefulness to charge him with recklessness and exaggeration. The fact was that not any man could have been more careful in ascertaining the opinions of the highest authorities on the subject which engaged his attention. Not any fact he ever stated on the factory question has been proved untrue. In the subjoined document, privately acquired by Mr Oastler, the names were not signed, a circumstance which alone proved how powerful opposition was in the early part of the short-time movement in Yorkshire :—

"That we are the surgeons of the General Infirmary at Leeds, an institution which annually admits about five thousand patients.

"That although it is very certain scrofulous diseases are greatly aggravated by overworking, and that the tendency to scrofula itself may probably be produced by it, yet we can speak with greater confidence respecting its effects in producing distortion of the knees, ankles, and feet, many of which cases have been brought to the Infirmary in so aggravated a degree as to be incurable.

"That upon investigating these cases, we have been led to attribute them to the circumstance of the patients having been kept too many hours in the day upon their legs, at a period of life when the bones and ligaments have not

attained sufficient firmness to sustain the superincumbent weight of the body for so long a time.

“ We are decidedly of opinion, that working in the night is more injurious to the health of children than working by day; and, further, that the age of nine years is the earliest period at which they ought to be put to work.”

Signed by the three surgeons of the Leeds Infirmary, March 22nd, 1831.

It was Mr Oastler's possession of such documents as the above, and he had several, which constituted his warrant for much of what he said, and enabled him ultimately to triumph over opposition.

It is very creditable to Mr Oastler's character as a public man, that statements originally denied when made by him were verified by undeniable authority. We append an example by way of illustration :—

“ Mr John Baldwin, Halifax, thought there was great credit due to Mr Oastler, for drawing the attention of the public to the factory system. He at one time thought Mr Oastler in error, but after hearing him at a public meeting which was held in the Cloth Hall Yard, Halifax, where he stated that the children had eaten their meals as they worked, he thought Mr Oastler was telling falsehoods, and from such observations was induced to go into his own factory next morning at breakfast time, and then found what Mr Oastler had said was perfectly correct. He then put it to his conscience, and conscience told him that it was wrong. He then stopped the engine at once, and gave them half an hour to eat their breakfasts, and has done so ever since.”

During the progress of the factory agitation the child from the field and the factory had been measured and weighed each against the other, and the last found wanting. The homes of the factory children had been visited, and the children watched as they, after a long day's work, sunk to sleep, unable to masticate the food they had intended to eat,

sleeping with the food in their mouths. The infirmaries and streets told of cripples, the parish authorities of increased poor rates. Machinery had rapidly increased, giving millions of pounds sterling to a few persons, and in its unregulated course causing misery and death to immense numbers of human beings : the yielding up of the human frames of the many, as a means of accumulating riches alone, had been stigmatised as a national crime. Christianity, civilization, and great riches, had been spoken of in the same breath with the horrible facts of the factories, as narrated before a committee of the House of Commons. The comparison, thus instituted, carried in its wake a condemnation more terrible than an avowedly Christian and civilized nation could continue willingly to bear. The supporters of factory regulation were told that the nation's greatness depended upon the existing system of production. They denied the assertion, and to their denial added,—“If a nation's greatness required such cruelties, that greatness was an abomination, and ought not to exist.” They were assured that a reduction of taxes and a repeal of the corn laws would remedy the evils complained of : they answered these assurances by pointing out that the system, the evils of which they complained, had its origin and growth when taxation was comparatively limited, and the corn laws, as enacted in 1815, unknown. The Sadler report placed in the hands of the Short Time Committees of the United Kingdom weapons which they, under the tutelage of Oastler, Sadler, Bull, Fielden, and others, were soon well instructed how to wield. A love of home was formerly among the working men of this country a trait of national character ; under the rule of the factory system this strong bond of order and happiness had been loosened. The leaders of the factory agitation appealed to the better sympathies of their countrymen to use their influence to renew this bond : home was with Oastler and Bull a theme of constant discourse, and their

example was followed by many others. The factory system, as reflected in the Sadler report, was a fathomless source of illustration on the evils arising from a neglect of home duties. To restore the working man once more to his rightful place as the head and provider for his own household was a noble aspiration, and the unceasing desire of Mr Sadler: all his efforts, in and out of parliament, were directed to that end; and when no longer enabled to serve the working men in the House of Commons, he counselled them not to delay their efforts to find another to represent in that assembly their feelings, desires, and objects.

The avowedly philosophical politician has usually a strong sense of contempt for enthusiasm, whether political, social, or religious. In his mind enthusiasm is closely allied to temporary insanity, and he hopes time will prove a remedy for the original disease. There were not wanting stoical philosophers of this order, who treated the strong desire of the operative classes as an evanescent feeling, and considered Mr Sadler's exclusion from parliament as a favourable circumstance, calculated to hasten the breaking up of the factory movement. Enthusiasm in a good cause does not readily die out among men seriously affected by real evils; regret for disappointment in such cases is apt to sober the judgment, and in consequence to strengthen the resolve for resolute action. The loss consequent on Mr Sadler's rejection by Leeds and Huddersfield, as a candidate for a seat in parliament, was deeply deplored, but the circumstance did not unnerve either the factory operatives or their influential supporters. A meeting of delegates was held, to consider what, under the circumstances, ought to be done; and, after long and anxious deliberation, it was resolved that the Rev. G. S. Bull should forthwith proceed to London, for the purpose of endeavouring to find an appropriate parliamentary leader. The mission was most important: the

selection of Mr Bull was a proof of the great confidence reposed in him by the factory operatives and their friends—a well-merited acknowledgment of his sincerity, discretion, and judgment. The result of Mr Bull's mission was conveyed to the secretaries of the various short-time committees, and to others therein interested, by a letter, of which the following is a copy:—

“Dear Sir,—I have to inform you that, in furtherance of the object of the delegates' meeting, I have succeeded, under Mr Sadler's sanction, in prevailing upon Lord Ashley to renew *his* (Mr Sadler's) bill.

“Lord Ashley gave notice yesterday afternoon, at half-past two, of a motion on the 5th of March, for leave ‘to renew the bill, brought in by Mr Sadler last session, to regulate the labour of children in the mills and factories of the United Kingdom, with such amendments and additions as appear necessary from the evidence given before the select committee of this house.’

“This notice, I am very happy to say (for I was present), was received with hearty and unusual cheers from all parts of a house of more than 300. No other notice was so cheered; and more than forty, some of them very popular, were given at the same time.

“I am informed that Lord Ashley received many unexpected assurances of support immediately after his notice, and has had more since.

“Pray call your committee together directly, and read this to them. As to Lord Ashley, he is noble, benevolent, and resolute in mind, as he is manly in person. I have been favoured with several interviews, and all of the most satisfactory kind. On one occasion his lordship said, ‘I have only zeal and good intentions to bring to this work; I can have no merit in it, that must all belong to Mr Sadler. It seems no one else will undertake it, so I will; and, without cant or hypocrisy, which I hate, I

assure you I dare not refuse the request you have so earnestly pressed. I believe it is my duty to God and to the poor, and I trust He will support me. Talk of trouble! what do we come to parliament for?

"In a letter he writes, 'To me it appeared an affair less of policy than of religion, and I determined, therefore, at all hazards to myself, to do what I could in furtherance of the views of that virtuous and amiable man (meaning Mr Sadler).'

"I have just left his lordship, and find him more determined than ever. He says, it is your cause; if you support him he will never flinch.

"Yours, most faithfully,

"G. S. BULL.

"London, Feb. 6, 1833.

"To Mr —, Secretary of the Short-time Committee, —."

Lord Ashley's acceptance of leadership was known to the country, through the medium of the daily press, as the following extract from the *Times* of February the 7th, 1833, will prove. The remarks of the *Times* indicate the great interest the question had excited; it had grown from the obscurity of Fixby Hall and Huddersfield, Mr Oastler, and a few operatives, to be considered a subject of high national importance:—"The renewal of Mr Sadler's benevolent measure, the Ten Hours' Bill, was undertaken on Tuesday evening by Lord Ashley, who feels a deep interest in this afflicting subject. Lord Ashley gave notice, immediately on the return of the Speaker from the Lords, and that notice was received with unusual and very hearty approbation from all parts of a house of upwards of 300 members. His lordship has been requested by the official organ of the delegates' meeting, whose address was recently agreed to, to undertake this charitable work. It seems, however, that the millowners, unable to resist the

strong tide of public opinion which the force of the evidence before the select committee, the result of Mr Sadler's indefatigable labours, has set in motion, have resolved to dole out some niggardly measure of relief to the poor children by the hand of Lord Morpeth, one of the members for the West Riding of Yorkshire. His lordship must have been somewhat forgetful of parliamentary courtesy when, after midnight on Tuesday, and when the house was all bustle, he announced his intention to bring in his, or rather the masters' bill, and, in so doing, dated his motion for the 27th of February, although Lord Ashley's was previously given for the 5th of March."

These remarks from the pages of the *Times* reflect much light on the position of the question at the time to which they refer. The opponents of the measure, unable longer to remain in successful opposition, hoped, by dividing the supporters of the Ten Hours' bill, to pass a measure through parliament, more satisfactory to themselves and yet sufficient to allay the public feeling which had been awakened, and to neutralize all future efforts on the part of the operatives, Mr Oastler and others. The opposition tactics were very readily appreciated by the operatives of the North, who resolved that in their cause the crafty maxim of "Divide and conquer," should not be practicable, with their consent.

Lord Ashley's adoption of the factory question, on the part of the operatives, was to them a source of congratulation and hope—a rising and Christian nobleman and statesman, who, avowedly, from a love of God, had resolved to serve the interests of man, was esteemed as a pearl of great value. His lordship's avowal that he had taken up the factory question as a duty he owed to "God and to the poor," and his declaration that if by the factory operatives supported, he would never flinch, were welcomed in tens of thousands of cellars, garrets, and cottages in the manufacturing districts. His lordship's letter, containing these words, having been

read to the local committees, and by them published, its contents were soon and widely known. The organization of the factory movement was so complete, that intelligence circulated with extraordinary rapidity. The main requisite for success in a movement involving humanity as a primary element, is an acknowledgment of the truth of a principle, he who asserts a broad principle, adheres to it, acts up to it, rests upon a rock which the waves of faction may beat against, surround, or sweep over, but it remains firm, hard, impenetrable, and is a safe and sure foundation on which to stand. Of all pitiable and fruitless things in existence, a statesman begging for his political bread from day to day, by the aid of mere expedients, is the most lamentable, humiliating, and wretched. He who faithfully believed he was bound to serve "God and the poor," was far removed from the mendicant politicians who lived upon the crumbs of accident, doled out by the hand of a treacherous and momentary popularity. At the request of Mr Bull, Mr Oastler addressed to Lord Ashley a letter of encouragement. His lordship's reply conveys very fully the state of mind of the writer as expressed by himself. His lordship's letter is as follows :—

"London, February 16th, 1833. I am much obliged to you for your kind and energetic letter ; much, very much, is owing to your humanity and zeal, and though I cannot reckon deeply on the gratitude of multitudes, yet I will hope that your name will for years to come, be blessed by those children who have suffered, or would have suffered the tortures of a factory. It is very cruel upon Mr Sadler that he is debarred from the joy of putting the crown upon his beloved measure ; however, his *must* be the honour, though another may complete it ; and for my part, I feel that if I were to believe that my exertions ought to detract the *millionth* part from his merits, I should be one of the most unprincipled and contemptible of mankind. Ask the question, simply,—*Who has borne the real toil, who has*

encountered the real opposition, who roused the sluggish public to sentiments of honour and pity? Why, Mr Sadler, and I come in (supposing I succeed) to terminate in the twelfth hour his labour of the eleven." The appreciation of the labour of Sadler was just—time proved that the end to be obtained was more difficult than his lordship, when entering on his labours, anticipated; he had, however, resolved on the work to be done. In the same letter he continued: "I greatly fear my ability to carry on this measure. I wish, most ardently I wish, that some other had been found to undertake the cause; nothing but the apprehension of its being lost, induced me to acquiesce in Mr Bull's request. I entertain such strong opinions on the matter, that I did not *dare*, as a Christian, to let my diffidence, or love of ease, prevail over the demands of morality and religion." Under any possible circumstances, there could not have been a more lasting basis for permanent action than "morality and religion."
